ries, to the soldiers, that this was not only the highest piece of ingratitude towards those who had fought the Parliament into a power of disbanding them, but also a crying act of injustice, as it was done with no other view than to cheat them of their arrears (n). Secondly, he procured an exemption for Sir Thomas Fairfax's army, or, in other words, for his own, the General having that title only and appointments, while Cromwell had the power; and the weight of the reduction fell upon Massey's Brigade in the West, together with the troops which Colonel Poyntz commanded in Yorkshire, men of whom he had good reason to doubt, and upon whom the Parliament might have depended (o). Thus he dexterously turned to his own advantage, the means contrived for his destruction. To compleat the triumphs of this year, the Earl of Essex died suddenly, September 14th, at Essex-House, and was buried with great pomp, October 22d, at the public expence (p), Mr. Cromwell coming post to town, in order to attend his funeral (q). On the 12th of November following, the army marched triumphantly through London, and, in the beginning of February following, the Scots having received their money, delivered up the King, who was carried prisoner to Holmby (r). At this time Lieutenant-General Cromwell had a very nice game to play. What wore the legal appearance of power, was evidently in the hands of the Parliament, in which the Presbyterian party was still prevalent; and as the General, Sir Thomas Fairfax, was likewise in that interest, it looked as if the real power was also on their side. At the bottom, however, the army, now taught to know their own strength, were in reality the masters, and they were entirely directed by Cromwell, though they knew it not themselves (s) [P]. If the King and Parliament had immediately closed, which was the interest of both, the Kingdom must have been settled, which was the point that the army chiefs, and their friends, meant to avoid; and what gave them an opportunity of avoiding it was, the King's inflexible attachment to Episcopacy on one side, and the Parliament insisting as obstinately on the establishment of Presbytery on the other (t). Lieutenant-General Cromwell saw the necessity of having a strong place, and getting the King's person into their power; and he contrived to do both, without seeming to have any hand in either. Oxford was, at that time, in a good condition, and well supplied with artillery; upon which the army seized it with the magazines, and every thing else (u). And Cromwell, then at London, prevailed upon Cornet Joyce to seize the King's person, with a strong detachment of horse, not only without the General's orders, but without any orders at all, excepting these verbal instructions from Crom-

[P] *Though they knew it not themselves.* There are some things in the text which stand in need of explanation; and indeed it cannot be otherwise: but to render this article intelligible, and to make the reader perfectly master of the subject of which we are treating, it is absolutely requisite to go very deep into the history of these times, which, in truth, is no other than the personal history of Cromwell; for his, and his friends intrigues, either moved, or gave motion, to all the parties in the kingdom. But, to come to those difficulties we mention, and to resolve them: in the first place then, it may seem strange, that having before intimated more than once, that Cromwell's party was become the strongest in the House of Commons, we should now assert, that there was a party stronger than theirs (95). The answer to this is, that the facts are certainly true; neither will it be hard to give a clear account of them. Those might be justly called Cromwell's party who framed the new model, continued him, his son Ireton, and a few more officers, in their commands, notwithstanding the Self-denying Ordinance; for these transactions shew that they were his party, as their being able to carry them shews they were the prevailing party. But, when the war was at an end, a considerable number of members, amongst whom were Mr. Pierpoint, Mr. Whitlocke, and several other eminent persons, altered their conduct, and believing that the army had answered the ends which it was proposed they should answer, by entirely subduing such as were in arms for the King, were now very sincerely for a peace; and therefore joined the old Presbyterian party, that were always for it. With them came back those who had been deluded, and such as had been frightened out of their former principles; and thus, in the latter end of the year 1646, the first party in the House was again become the strongest, and, for a time, were stronger than ever (96). Another difficulty may be raised, from considering the conduct of Cromwell, and the great officers, who, while the army first became mutinous, remained in the House, and not only remained, but spoke and voted with the majority; so that nothing seems to be more unfair, than to charge them, at this juncture, with promoting those bad de-

signs, notwithstanding they afterwards openly concurred in them. Now to remove this difficulty, it must be observed, that Cromwell and Ireton went down from the House to the army first, to dispose them to disband, but, instead of acting sincerely in this matter, they discouraged and brow-beat such officers and soldiers as shewed themselves inclined to it, and gave hints to the rest how they might avoid it, by suggesting, that they were not mercenaries but military commoners, who, in that respect, had a right to apply to their representatives, and, amongst other things, to insist, previously to their being disbanded, upon an Act of Indemnity with the royal assent, that they might not suffer as the King's subjects for what they had done as the Parliament's soldiers (97). This produced the erecting a new council, composed at first of two private men out of each company and troop in every regiment, under the title of Agitators, who were to frame and dispose the propositions of the army to the Parliament. After taking this step, which was the foundation of all that followed, Cromwell, Ireton, and the rest of the great officers, came up to attend the service of the House, well knowing, that the fire they had kindled would burst out with violence in their absence, as accordingly it did. Another difficulty yet remains, and that is as to their conduct in the House, which, it is allowed, was not at all of a piece with their behaviour in the army (98). Now the reason of this will quickly appear; for, by the manner of their speaking and voting, they secured the confidence of the Parliament to such a degree, that, when the disobedience of the army became flagrant, they were sent down to reduce them to their duty, whereas had they used another language, or a different conduct, they had been sent to the Tower. But what followed upon their returning to the army? Why, instead of performing what they were sent for, they joined with the mutineers (99), added a Council of Officers to the Council of Agitators, erecting thereby Military Houses of Lords and Commons, and sent up their resolutions to give law to the Parliament; which clearly proves the truth and certainty of all that is advanced in the text.

well(*w*). This was executed on the 4th of June 1647, notwithstanding the Parliament's Commissioners were then with the King, who was conducted from Holmby to Childersley(*x*), then the army's head quarters, where he was received not only with reverence but with kindness, and treated much more indulgently than while in the hands of the Parliament; chiefly through the management of Lieutenant-General Cromwell and Commissary Ireton, his son-in-law, who, if Major Huntington, and others, may be believed, made high professions for his service(*y*). It is very certain, that Sir Thomas Fairfax knew nothing of the taking away of the King; that he disliked it; that he would have sent him back again with the Commissioners, under the guard of two regiments of horse; but the Commissioners refused to act, or the King to move(*z*). Nay, to such a degree was that Monarch persuaded of the sincerity of his new friends, that he had the indiscretion to tell Sir Thomas Fairfax, when he made him a tender of his duty and respect, with promises of fair treatment, that *he thought he had as good an interest in the*

ARMY as himself(*a*). The remaining six months of this year were the most critical of Lieutenant-General Cromwell's whole life; for, in order to succeed in his schemes, it was absolutely necessary to deceive the King, the Parliament, and the Army, which, in their turns, was effected, though not without danger and difficulty. As for the King, he relied so entirely upon Cromwell and Ireton, and they, on the other hand, spoke of and acted towards him in such a manner, that they were looked upon as absolute courtiers; nor is it at all wonderful that the King gave credit to them, when they brought the army to send a letter to the Parliament, which was delivered July 9th, 1647, avowing the King's cause to be their's(*b*), and that no settlement could be hoped for without granting him his just rights. In reference to the Parliament, so long as they enjoyed their power, Mr. Cromwell always spoke the language of a Member of the House of Commons, shewed a high regard for their privileges, and professed, that he was suspected and disliked by the Army, for his attachment to the Civil Government(*c*). This did not, however, hinder his being disbelieved by many, till at length he found it necessary, for his own safety, to make his escape from the House with some precipitation(*d*). As to the soldiers, and that mutinous spirit which they discovered against the Parliament, it was raised, fomented, and managed, by Cromwell and Ireton, the former declaring at Triploe-Heath, when the Parliament had been obliged to erase their own declaration out of their Journals, *Now they might be an Army as long as they lived*(*e*). It was owing to this spirit that the eleven Members of the House of Commons were impeached, the House of Commons purged, and their authority brought so low, that the London apprentices came into the House, and forced them to vote what they pleased(*f*). It is true, that, when the Earl of Manchester and Mr. Lenthall, the Speakers, retired to the Army, and the Lord Grey and Mr. Pelham were chosen in their places, the Lords and Commons recovered their authority; but they did not hold it for a week, Sir Thomas Fairfax marching directly to London, replacing the old Speakers, August 6th, and the next day marching in triumph through the city, so that now the Army, and not the Parliament, were the

Supreme Authority(*g*). Soon after this a new party sprang up among the soldiers, under the title of LEVELLERS, who made no secret of their hating equally both King and Parliament; and it was to save himself from these people, who, as he was informed by Cromwell, fought his life, that the King, Nov. 11th, fled from Hampton-Court to the Isle of Wight, after having rejected the Parliament's proposals by Cromwell's and Ireton's advice(*h*). Immediately after this transaction General Cromwell altered his behaviour towards the King entirely, as some think, out of fear of the Agitators, but, as Lord Hollis and others affirm, in consequence of his own designs(*i*); for, having made use of the King's presence to manage the Army, and of the power which the Army had thereby acquired, to humble and debase the Parliament, there was no farther end to be answered by keeping measures any longer towards the King(*k*). In order to be convinced of this we need only consider, that the same method was practised in the Isle of Wight, while the Parliament was again treating with the King, which had been before practised at Holmby, and the very same instrument employed, the famous Cornet Joyce, who, upon very good grounds, is believed to be the very man that cut off the King's head(*l*). The Parliament, now much altered from what it was, upon the King's refusing to pass *four* Bills which they sent him, fell into very warm debates, in which it is said, that Cromwell was a principal speaker, and inveighed bitterly against his Majesty: he said, the King was a very able man, but withal a great dissembler, one in whom no trust could be reposed, and with whom therefore they ought to have nothing to do for the future(*m*). However this might be, the Parliament, on the 5th of January, voted that no more addresses should be made to the King(*n*), and from that time he was more strictly imprisoned than ever; all which the best writers attribute to a new conjunction between Cromwell and the Commonwealth's Men, who, after so much purging, had gained a very great influence in Parliament(*o*) [2]. It very soon appeared, notwithstanding this agreement between the

[2] Who after so much purging, had gained a very great influence in Parliament.] It is a point out of all dispute, since there is not a writer of any party but agrees in the fact, that the great inclination shewn by the

ries, to the soldiers, that this was not only the highest piece of ingratitude towards those who had fought the Parliament into a power of disbanding them, but also a crying act of injustice, as it was done with no other view than to cheat them of their arrears (11). Secondly, he procured an exemption for Sir Thomas Fairfax's army, or, in other words, for his own, the General having that title only and appointments, while Cromwell had the power; and the weight of the reduction fell upon Massey's Brigade in the West, together with the troops which Colonel Poyntz commanded in Yorkshire, men of whom he had good reason to doubt, and upon whom the Parliament might have depended (12). Thus he dexterously turned to his own advantage, the means contrived for his destruction. To compleat the triumphs of this year, the Earl of Essex died suddenly, September 14th, at Essex-House, and was buried with great pomp, October 22d, at the public expence (13), Mr. Cromwell coming post to town, in order to attend his funeral (14). On the 12th of November following, the army marched triumphantly through London, and, in the beginning of February following, the Scots having received their money, delivered up the King, who was carried prisoner to Holmby (15). At this time Lieutenant-General Cromwell had a very nice game to play. What wore the legal appearance of power, was evidently in the hands of the Parliament, in which the Presbyterian party was still prevalent; and as the General, Sir Thomas Fairfax, was likewise in that interest, it looked as if the real power was also on their side. At the bottom, however, the army, now taught to know their own strength, were in reality the masters, and they were entirely directed by Cromwell, though they knew it not themselves (16) [P]. If the King and Parliament had immediately closed, which was the interest of both, the Kingdom must have been settled, which was the point that the army chiefs, and their friends, meant to avoid; and what gave them an opportunity of avoiding it was, the King's inflexible attachment to Episcopacy on one side, and the Parliament insisting as obstinately on the establishment of Presbytery on the other (17). Lieutenant-General Cromwell saw the necessity of having a strong place, and getting the King's person into their power; and he contrived to do both, without seeming to have any hand in either. Oxford was, at that time, in a good condition, and well supplied with artillery; upon which the army seized it with the magazines, and every thing else (18). And Cromwell, then at London, prevailed upon Cornet Joyce to seize the King's person, with a strong detachment of horse, not only without the General's orders, but without any orders at all, excepting these verbal instructions from Crom-

[P] *Though they knew it not themselves.* There are some things in the text which stand in need of explanation; and indeed it cannot be otherwise: but to render this article intelligible, and to make the reader perfectly master of the subject of which we are treating, it is absolutely requisite to go very deep into the history of these times, which, in truth, is no other than the personal history of Cromwell; for his, and his friends intrigues, either moved, or gave motion, to all the parties in the kingdom. But, to come to those difficulties we mention, and to resolve them: in the first place then, it may seem strange, that having before intimated more than once, that Cromwell's party was become the strongest in the House of Commons, we should now assert, that there was a party stronger than theirs (19). The answer to this is, that the facts are certainly true; neither will it be hard to give a clear account of them. Those might be justly called Cromwell's party who framed the new model, continued him, his son Ireton, and a few more officers, in their commands, notwithstanding the Self-denying Ordinance; for these transactions shew that they were his party, as their being able to carry them shews they were the prevailing party. But, when the war was at an end, a considerable number of members, amongst whom were Mr. Pierpoint, Mr. Whitlocke, and several other eminent persons, altered their conduct, and believing that the army had answered the ends which it was proposed they should answer, by entirely subduing such as were in arms for the King, were now very sincerely for a peace; and therefore joined the old Presbyterian party, that were always for it. With them came back those who had been deluded, and such as had been frightened out of their former principles; and thus, in the latter end of the year 1646, the first party in the House was again become the strongest, and, for a time, were stronger than ever (20). Another difficulty may be raised, from considering the conduct of Cromwell, and the great officers, who, while the army first became mutinous, remained in the House, and not only remained, but spoke and voted with the majority; so that nothing seems to be more unfair, than to charge them, at this juncture, with promoting those bad de-

signs, notwithstanding they afterwards openly concurred in them. Now to remove this difficulty, it must be observed, that Cromwell and Ireton went down from the House to the army first, to dispose them to disband, but, instead of acting sincerely in this matter, they discouraged and brow-beat such officers and soldiers as shewed themselves inclined to it, and gave hints to the rest how they might avoid it, by suggesting, that they were not mercenaries but military commoners, who, in that respect, had a right to apply to their representatives, and, amongst other things, to insist, previously to their being disbanded, upon an Act of Indemnity with the royal assent, that they might not suffer as the King's subjects for what they had done as the Parliament's soldiers (21). This produced the erecting a new council, composed at first of two private men out of each company and troop in every regiment, under the title of Agitators, who were to frame and dispose the propositions of the army to the Parliament. After taking this step, which was the foundation of all that followed, Cromwell, Ireton, and the rest of the great officers, came up to attend the service of the House, well knowing, that the fire they had kindled would burst out with violence in their absence, as accordingly it did. Another difficulty yet remains, and that is as to their conduct in the House, which, it is allowed, was not at all of a piece with their behaviour in the army (22). Now the reason of this will quickly appear; for, by the manner of their speaking and voting, they secured the confidence of the Parliament to such a degree, that, when the disobedience of the army became flagrant, they were sent down to reduce them to their duty, whereas had they used another language, or a different conduct, they had been sent to the Tower. But what followed upon their returning to the army? Why, instead of performing what they were sent for, they joined with the mutineers (23), added a Council of Officers to the Council of Agitators, erecting thereby Military Houses of Lords and Commons, and sent up their resolutions to give law to the Parliament; which clearly proves the truth and certainty of all that is advanced in the text.

ARMY as himself (a). The remaining six months of this year were the most critical of Lieutenant-General Cromwell's whole life; for, in order to succeed in his schemes, it was absolutely necessary to deceive the King, the Parliament, and the Army, which, in their turns, was effected, though not without danger and difficulty. As for the King, he relied so entirely upon Cromwell and Ireton, and they, on the other hand, spoke of and acted towards him in such a manner, that they were looked upon as absolute courtiers; nor is it at all wonderful that the King gave credit to them, when they brought the army to send a letter to the Parliament, which was delivered July 9th, 1647, avowing the

King's cause to be their's (b), and that no settlement could be hoped for without granting him his just rights. In reference to the Parliament, so long as they enjoyed their power, Mr. Cromwell always spoke the language of a Member of the House of Commons, shewed a high regard for their privileges, and professed, that he was suspected and disliked by the Army, for his attachment to the Civil Government (c). This did not, however, hinder his being disbelieved by many, till at length he found it necessary, for his own safety, to make his escape from the House with some precipitation (d). As to the soldiers, and that mutinous spirit which they discovered against the Parliament, it was raised, fomented, and managed, by Cromwell and Ireton, the former declaring at Triploe-Heath, when the Parliament had been obliged to erase their own declaration out of their Journals, *Now they might be an Army as long as they lived* (e). It was owing to this

spirit that the eleven Members of the House of Commons were impeached, the House of Commons purged, and their authority brought so low, that the London apprentices came into the House, and forced them to vote what they pleased (f). It is true, that, when the Earl of Manchester and Mr. Lenthall, the Speakers, retired to the Army, and the Lord Grey and Mr. Pelham were chosen in their places, the Lords and Commons recovered their authority; but they did not hold it for a week, Sir Thomas Fairfax marching directly to London, replacing the old Speakers, August 6th, and the next day marching in triumph through the city, so that now the Army, and not the Parliament, were the Supreme Authority (g). Soon after this a new party sprang up among the soldiers, under the title of LEVELLERS, who made no secret of their hating equally both King and Parliament; and it was to save himself from these people, who, as he was informed by Cromwell, sought his life, that the King, Nov. 11th, fled from Hampton-Court to the Isle of Wight, after having rejected the Parliament's proposals by Cromwell's and Ireton's advice (h). Immediately after this transaction General Cromwell altered his behaviour towards the King entirely, as some think, out of fear of the Agitators, but, as Lord Hollis and others affirm, in consequence of his own designs (i); for, having made use of the King's presence to manage the Army, and of the power which the Army had thereby acquired, to humble and debase the Parliament, there was no farther end to be answered by keeping measures any longer towards the King (k). In order to be convinced of this we need only consider, that the same method was practised in the Isle of Wight, while the Parliament was again treating with the King, which had been before practised at Holmby, and the very same instrument employed, the famous Cornet Joyce, who, upon very good grounds, is believed to be the very man that cut off the King's head (l). The Parliament, now much altered from what it was, upon the King's refusing to pass four Bills which they sent him, fell into very warm debates, in which it is said, that Cromwell was a principal speaker, and inveighed bitterly against his Majesty: he said, the King was a very able man, but withal a great dissembler, one in whom no trust could be reposed, and with whom therefore they ought to have nothing to do for the future (m). However

[2] *Who after so much purging, had gained a very great influence in Parliament.* It is a point out of all dispute, since there is not a writer of any party but agrees in the fact, that the great inclination shewn by the

grantees of the Army, and the friends to a Republic, that the nation in general hated the thoughts of submitting to a Stratocracy, Aristocracy, or a Democracy, and were resolved

the Army to provide not only for the safety of the King's person, but for his restitution to his just rights, was, at first infused, and promoted all along, by Lieutenant-General Cromwell and Commissary-General Ireton, who, from this merit, assumed to themselves the negotiation with the King; which they carried on so much to his satisfaction in most respects, that he thought his condition much mended, and trusted them very much; though he was not so weak to confide entirely in their promises, as some writers have asserted. What the methods were by which Cromwell imposed upon him and his old servants, and to how great a height this imposition was carried, may appear by one passage out of many, in the work of a Gentleman of honour, and who was deeply interested in this affair; and who was both an eye-witness, and very largely concerned in every transaction that he mentions (100). After observing that the Agitators, on the King's first coming to the Army, were very sincere in his cause, and desired this Gentleman to give them notice if he saw any cause to suspect the reality of Cromwell's professions, he proceeds thus: 'In all my conferences with him, I found no man, in appearance, so zealous for a speedy blow as he, sometimes wishing that the King was more frank, and would not tie himself so strictly to narrow maxims, sometimes complaining of his son Ireton's slowness in perfecting the proposals, and his not accommodating more to his Majesty's sense, always doubting, that the Army would not preserve their good inclinations for the King. I met with him about three days after I came to Reading, as he was coming from the King, then at Causton: he told me, that he had lately seen the tenderest sight that ever his eyes beheld, which was, the interview between the King and his children, and wept plentifully at the remembrance of it, saying, that never man was so abused as he, in his sinister opinions of the King, who, he thought, was the uprightest and most conscientious man of his three kingdoms; that they of the Independent party, as they were called, had infinite obligations to him, for not consenting to the Scots propositions, which would have totally ruined them, and which his Majesty's interest seemed to invite him to; and concluded with me by wishing, that God would be pleased to look upon him according to the sincerity of his heart towards his Majesty. I immediately acquainted his Majesty with this passage, who seemed not well edified with it; and did believe, that all proceeded out of the use Cromwell and the Army had of his Majesty, without whom he thought they could do nothing.' This passage shews at what time Cromwell endeavoured to be thought well affected to the King, and professed his having a good opinion of him. Had these been sincerely his sentiments, he would never have altered them, for the King gave him no occasion; since it is clearly proved, that his final answer to the proposals which were made him, not only spoke the sense of him and Ireton, as the King conceived it, but was altered by their hands till it satisfied themselves (101). Had he been really inclined to restore the King, he might have done it now with a high hand. A great majority of the Parliament were for him; the city of London was in their sentiments; the measures taken by the Scots, and the insurrections in several counties in his favour, shew, that this was also the sense of the nation: if therefore Lieutenant-General Cromwell had made use of his wonderful capacity, to dispose the Army not to any new design, but to have performed their own promises; he might have settled the Government upon its old foundation, and have made himself a very great man (102). He resolved, however, not to do this; and, having made that resolution, it became necessary to prevent the King's being settled by others; and how he contrived to bring this about, a noble Historian has very fully informed us, after having assured us that this was Cromwell's design (103). 'The difficulty was, how to bring this about to cozen the King, so as to make him act it himself, and fly into the cage: carry

him by force they durst not; it would be unhandsome; it might be dangerous: they use this stratagem; heighten, and sharpen underhand, the mad humour of their party against him, to have it break out all manner of ways in threatening speeches, pamphlets, some consultations, that, whilst his Majesty lived in England, he could not be safe; meetings to consider, and come to some resolutions, of taking him out of the way; the Army is again disquiet, the Officers not obeyed; all things tending to mutiny, and some violent eruption. Then does Mr. Cromwell, and his Cabinet-Council, seem to be extremely solicitous of the safety of his Majesty's person; cause some discoveries to be given him of his danger; express great indignation and trouble in the House, in the Army, and other places, against these proceedings; act their parts so to the life, as the life of a man must go to make up the disguise; an Agitator, whom, at a Council of War, with two more they condemned, was shot to death; so as the King could not but have a great confidence in these men, to believe that they were really for his preservation. At last Cromwell writes a letter to Whalley, who commands the Guards about his Majesty's person, to be shewn his Majesty; and other informations are likewise brought him, to make him believe, that, if he escape not presently, he will be murdered; and he is advised to go to the Isle of Wight, where they had before-hand provided him a jaylor, Colonel Hammond, one for whom, they said, they could answer, that there his Majesty would be in safety, and they able to serve him. Here they have the King safe enough; and now the Army is presently quiet, the Agitators as obedient as lambs, and Councils of War are set up again to act as formerly. And Sir Thomas Fairfax, with their advice, sets out a Remonstrance, to give satisfaction to the Army; which he concludes with a protestation to adhere to, conduct, live and die with the Army, in the prosecution of some things there expressed; as namely, to obtain a present provision for constant pay, stating of accounts, security for arrears, with an effectual and speedy course to raise monies; a period to be set to this Parliament; provision for future Parliaments, the certainty of their meeting, sitting, and ending; the freedom and equality of elections, and other things, which he had the impudence and boldness to publish in print.' It is true, that Lord Hollis, being an enemy to Cromwell, and writing this book to shew the cause of his enmity, is not a witness to be believed entirely from his own assertion. But the main fact here is, the letter which had been passed over by some, denied by others, and, for any thing that I know, never proved upon Cromwell by any; till Colonel Whalley's letter to the Parliament, upon the King's withdrawing from Hampton-Court, was published; in which it is positively said, that Cromwell wrote the letter to him (104), and that he shewed it to the King. This letter Rushworth had in his power, and might have printed, if he had so pleased; but truths of all kinds are not welcome to all men. As for the Propositions that were sent to the King in the Isle of Wight, they were destructive not only of his power and honour, but of the Constitution. By them he was required to take the guilt of all the blood shed in the war upon himself, to cancel all his own acts, and to establish the independent power of the Parliament and Army; that is, in plain English, to depose himself, and, at the same time, lend his authority for the establishing a new tyrannical power over his people (105). For rejecting such terms, Cromwell declared that he ought to be treated with no more; the Parliament, now under the direction of the Army, voted this; and Sir Thomas Fairfax, without waiting for their directions, ordered the King to be made a close prisoner; and this, though done without their knowledge, was approved by Parliament (106). These indisputable facts are sufficient to let us into the motives upon which those men proceeded who did all these things, and who, in the Council of War held at Windsor, immediately after, resolved to do all that they afterwards did, though, from certain

unfore-

resolved to run any hazard, in order to recover their old Constitution (p); and this it was that created the second Civil War, in which many, who had formerly fought for the Parliament, took up arms for the King; and part of the fleet under Vice-Admiral Batten, who had been displaced to make way for Cromwell's favourite Rainsborough, revolted to Prince Charles (q). Yet this was far from being all. The Scots, who now saw that their expectations were entirely defeated, fell upon new measures, and having, without doubt, some secret encouragement from the chiefs of the Presbyterian party in England, determined to raise an army, and march it into England (r), in hopes of being joined by the King's friends in the field, and, upon the first advantage gained there, owned and applauded by their old acquaintance in the Parliament (s), who were true to their ancient principles, and desirous of a settlement upon a basis of their own laying, rather than a revolution, taking rise only from chance and power (t). In the mean time there were risings also in Kent and Surrey; and, though these were in a manner suppressed by that part of the Army which lay near London, yet the remains of these two bodies forcing a passage into the county of Essex, took possession of Colchester, where, under the Earl of Norwich, Sir Charles Lucas, and Sir George Lisle, they made a very gallant defence (u). As the war was thus revived in all parts of the Island, there was a necessity of dividing the Army, in consequence of which Cromwell marched into Wales against Major-General Langhorn, Colonel Poyer, and Colonel Powell (w). Sir Thomas Fairfax besieged Colchester (x), and General Lambert marched northward against the Scots (y). The military power being thus employed, the city of London and the Parliament were left, in some measure, at liberty to pursue their own sentiments, and what these were quickly appeared; for on June the 27th, 1648, the city petitioned for a personal treaty with the King, which was very well received, and some steps taken thereupon (z). But by the arts of Sir Henry Vane, and those of his party, many obstacles being raised, the city, on the 8th of August following, petitioned the House of Lords in still stronger and more direct terms; which petition was not only favourably accepted, but the petitioners had also the thanks of the House given them; an evident proof, that the scope of their petition was also the sense of that House (a). A few days after the Commons recalled their vote for non-addresses, set on foot a personal treaty with the King at the Isle of Wight, and at length voted his Majesty's concessions satisfactory (b). An attempt was also made to impeach Cromwell of High-treason upon Major Huntington's information, whom he had chiefly intrusted in his negotiation with the King; but this failed (c). The great success of the Army quickly altered the face of things; for Cromwell having reduced, and, in a great measure, destroyed those who took up arms in Wales, began his march northward in the middle of July, and, in a month after, routed Sir Marmaduke Langdale, and the Scots under Duke Hamilton; the terror of which victory forced Colchester to surrender (d): and now the Army, returning towards London, November the 28th, sent a Remonstrance to the House of Commons, disapproving all they had done (e). This Remonstrance was carried by Colonel Ewers, who went next into the Isle of Wight, where he seized the person of the King, which was resented by the Parliament, who commanded the General to recal his orders (f). Instead of this the Army marched directly to London, and, in the first week of December, took possession of it, purged the House of Commons, that is, turned out the better part of its Members, and then forced the remainder to do what they pleased (g). In most of these steps Cromwell was very active, and is, with good grounds, believed to have directed all the rest (h) [R]. It is not necessary

unforeseen circumstances that fell out, they were hindered from doing it so soon as they intended (107). As for the coalition between Cromwell and his creatures, and the Commonwealth party in the House of Commons, the history of it may be found in Whitlocke and in Ludlow (108), much to the honour of Cromwell's abilities, who deceived them with as much dexterity as he had done the King, and for the very same reason, because there was no other way of working his own purposes but by deceiving them. If there had, he would probably have taken it; but, as there was not, he was forced to take it; and the great wonder is, that, having dissembled and deceived so often before, he should be trusted again; to account for which we must consider, that this was not choice in the Commonwealth's men (109), but necessity: they did not trust Cromwell to do their work, but they made use of him, because he was the only instrument by which their work could be done.

[R] And is, with good grounds, believed to have directed all the rest.] After Lieutenant-General Cromwell was sent to reduce those who, deserting the Parliament's service, had taken up arms in Wales, he prosecuted that expedition with such vigilance, that he did more in a month than could have been well

expected from him in six; and yet what he did was most effectually done also, and without the least tincture of passion; though he is commended for his clemency by some, and as loudly condemned of cruelty by others; but as haste was all he aimed at, so he was either gentle or severe as that directed. If he could procure a surrender upon terms, no-body gave better, none kept them more strictly; but if he was obliged to make use of force, he did not spare shedding blood; not from particular resentment, or any barbarous delight in it, but to serve his purpose, which, in this case, was dispatch (110). This war being quickly ended, though at a great expence of men, who had done the Parliament good service, those who fought against Cromwell having had a share in most of the battles against the King; he marched northwards to join Lambert, and came time enough to fall upon Sir Marmaduke Langdale, and the English Royalists, who behaved as well as men could do, and were beat by dint of numbers; but for the Scots under Duke Hamilton, they were so ill commanded, that, though they had numbers on their side, they were rather butchered than beaten, so that not a tenth part of them got home again (111). Cromwell now changed his maxim, proceeded slowly, went into Scotland, con-

necessary to dwell particularly upon those circumstances that are well known, in relation to bringing the King before the High Court of Justice, and in pursuance to the sentence passed there to his death, since the share that Lieutenant-General Cromwell had therein was open and public: he sat in the Court, he signed the Warrant, and he prosecuted the accomplishment of it by the King's bloody execution (i). It is also known, that he threatened Colonel Downs out of that tenderness which he shewed for his Sovereign, when before the Court; and Colonel Ingoldsby always affirmed, that Cromwell guided his hand in his signing the sentence. What applications were made to him for saving the King's life may be found in a multitude of books, and some of the passages relating to them are undoubtedly worthy of notice (k) [S]. One remark however is very obvious upon this head,

(i) Clarendon's Hist. Rebellion, p. 567-569. Whitlocke's Memorials, p. 370-375. Echard's Hist. of Eng. p. 653-661.

cluded a treaty with the dominant party in that kingdom, and left a body of troops with them to maintain it; by which having secured that part of the island, he was in no pain about the rest, as knowing that his victorious army must make all bend before them. At this distance, however, he signified to his friends in Parliament, that they should adhere to their vote of making no farther addresses to the King (112), which, though they found it impossible to do, yet, as the most effectual step towards frustrating the opposite measures, they procured Sir Henry Vane the younger to be one of the Commissioners in the Treaty at the Isle of Wight, where, by his arts, and in conjunction with the Lord Say, he retarded it very much, which gave Cromwell time to march up to London (113). In this march the Remonstrance was hammered out directly contrary to the declaration of the Army, in which they had bewailed their former miscarriages towards the Parliament, offering violence to the two Houses, and promised faithfully and dutifully to acquiesce in their wise resolutions. Upon the very day that Cromwell came to London, Colonel Pride turned one-and-forty Members out of the House, and made them prisoners; and the very same day Colonel Ewer seized the King in his bed-chamber, and carried him out of the Isle of Wight to Hurst-Castle (114); both which steps are supposed to have been taken by directions from Cromwell; and that this supposition was not ill founded, the reader may probably conclude from the following account of it by the General Thomas Lord Fairfax (115). 'In the Isle of Wight the Parliament treated upon propositions of peace with the King; but alas! the *Envious one* sowed tares, that could not be rooted out but by plucking up the corn also. The King was the golden ball cast before the two parties, the Parliament and the Army; and the contest grew so great, that it must again have involved the kingdom in blood, but the Army, having the greater power, got the King again into their hands, notwithstanding all endeavours to hinder it. The treaty was scarcely ended before the King was seized on by the hands of the same persons that took him from Holmby; soon after followed his trial. To prepare a way to this work, this agitating Council did first intend to remove all out of the Parliament who were like to oppose them; and carried it on with such secrecy, as I had not the least intimation of it till it was done, as some of the Members of the House can witness, with whom I was at that very time, upon special business, when that attempt was made by Colonel Pride upon the Parliament, which I protest I never had any knowledge of till it was done. The reason why it was so secretly carried, that I should have no notice of it, was, because I always prevented those designs when I knew them. By this purging of the House, as they called it, the Parliament was brought into such a consumptive and languishing condition, that it could never again recover that healthful constitution which always kept the kingdom in its strength, life, and vigour.' When the first proposition was made in the House of Commons, for trying the King, Mr. Cromwell rose up (116), and said, that 'If any man moved this upon design, he should think him the greatest traitor in the world; but since Providence and necessity had cast them upon it, he should pray God to bless their counsels, though he was not provided on the sudden to give them counsel.' But not long after he was: for, being a great pretender to Enthusiasms and Revelations, he told them, that, as he was praying for a blessing from God on his undertaking to restore the

King to his pristine Majesty, his tongue cleaved to the roof of his mouth, that he could not speak one word more; which he took as a return of prayer, and that God had rejected him from being King; and to others he asserted, that it was lawful to circumvent a wicked man with deceit and fraud. If the reader is inclined to pursue this matter any farther, he may meet with the clearest information in the work of a late Prelate, who has given such an account of Mr. Cromwell's dispute with the Commissioners from Scotland, on the necessity of the King's being subjected to a capital prosecution, as will leave him without the least colour of doubt, that the whole of this measure was of his contriving and conducting, though supported by all the Republican party in the Parliament (117).

[S] *Are undoubtedly worthy of notice.* Of these one of the most remarkable is, the transaction between the Lieutenant-General and a cousin of his, Colonel John Cromwell, an officer in the service of the States. This Gentleman is said to have been in England while the King was in the hands of the Army; and that in a conference he had with the Lieutenant-General, the latter made use of this expression, *I think the King the most injured Prince in the world*, and then clapping his hand upon his sword, added, *But this, cousin, shall do him right* (118). The Colonel returning to Holland soon after, reported what he took to be truth, that the Lieutenant-General had a great regard and respect for the King. When, therefore, the news of the King's trial reached Holland, he was sent over with Letters Credential from the States, to which was added a blank with the King's signet, and another of the Prince's, both confirmed by the States, for Cromwell to set down his own conditions, if he would now save his Majesty's life. The Colonel went directly to his kinsman's house, who was so retired and shut up in his chamber, with an order to let none know he was at home, that it was with much difficulty he obtained admittance, after he had told who he was. Having mutually saluted each other, the Colonel desired to speak a few words with him in private; and began, with much freedom, to set before him the heinousness of the fact then about to be committed, and with what detestation it was looked upon abroad, telling him, That of all men living he could never have imagined he would have had any hand in it, who, in his hearing, had protested so much for the King. To this Cromwell answered, It was not he but the Army, and though he did once say some such words, yet now times were altered, and Providence seemed to order things otherwise. And it is said he added, that he had prayed and fasted for the King, but no return that way was yet made to him. Upon this the Colonel stepped a little back, and suddenly shut the door, which made Cromwell apprehend he was going to be assassinated, but the other pulling out his papers, said to him, *Cousin, this is no time to trifle with words: See here, it is now in your own power not only to make yourself but your family, relations, and posterity, happy and honourable for ever; otherwise, as they changed their name before from Williams to Cromwell, so now they must be forced to change it again; for this fact will bring such an ignominy upon the whole generation of them, that no time will be able to deface.* At this Cromwell paused a little, and then said, *Cousin, I desire you will give me till night to consider of it, and do you go to your inn, and not to bed, till you hear from me.* The Colonel did accordingly; and, about one in the morning a messenger came to tell him, He might go to rest, and expect no other answer to carry to the Prince; for the Council of Officers had been seeking God, a phrase, it

(117) Whitlocke's Memorials, p. 365. Burnet's Hist. of his own times, p. 46, 47.

(118) Flagellum, or the life of Cromwell, p. 53.

head, which is, that his power and his principles must have been very well known, both at home and abroad, otherwise such general applications could have never been made; for though it be true, that there were addressees also to the General, yet those were from such as opposed the action, as for instance, the Presbyterian Ministers, the Scots Commissioners, and some of the secluded Members; but those who were guided entirely by pity and concern, laboured only to move Cromwell, who is said, after this tragedy was acted, to have spoken his mind freely by owning, that, if he had not been a King, he might have lived longer (l).

(l) Flagellum, or the life of Cromwell, p. 74.

The Government being now entirely changed, for in five days after the King's death the House of Lords was voted useless, it became necessary to think of some expedient for managing the executive power; and therefore it was resolved to set up a Council of State, of which John Bradshaw was President, and Lieutenant-General Cromwell a principal Member (m). Before he had well taken possession of this new dignity, he was again called to action, and that too as brisk, and at least as hazardous, as any in which he had taken any share. The persons with whom he was to engage were a part, and certainly, if they had known their own minds, the far greatest part of the very army which he commanded, and the occasion this. All the purposes for which they were necessary being answered, it was resolved the Agitators should assemble no more. The House of Commons had deprived the House of Lords of a being, by a vote; but in the Army the contrary method was pursued; the General, and his Council of Officers, would no longer vouchsafe any conference with, or even countenance to, the Agitators, which was what the greatest part of the Army could not bear; and therefore had themselves recourse to a method which their officers had taught them upon other occasions; and this was, to set forth their sentiments by way of Remonstrance, which was presented by five Agitators to the General (n). For this high offence they were seized, and tried by a Court-Martial, and sentenced to ride with their faces to their horses tails, at the head of their respective corps, with a paper, expressing their crime, fixed on their breasts; after which their swords were to be broke over their heads, and themselves cashiered; every circumstance of which was strictly executed upon the 6th of March, in Great Palace-Yard (o). This served only to raise the flame higher; for several regiments of horse, and amongst the rest Cromwell's, mutinied, put white cockades in their hats, and appointed a rendezvous at Ware; where Cromwell appeared when he was least expected, and brought with him some regiments quartered at a distance, that he could depend on. Here, without any previous expostulations, he, with two regiments of horse, surrounded one regiment of the mutineers, and calling four men by name out of their ranks, obliged them to cast dice for their lives, and those two that escaped were ordered to shoot the others, which they did, and upon this the tame spectators of the tragedy thought fit to slip their white cockades into their pockets, and to secure themselves by a submission (p). This affair did not end here: for one Lockyer being shot in St. Paul's Church-Yard for the like offence, his confederates, to the number of a thousand, attended at his funeral with black and sea-green ribbons, by way of favours (q). This portended a storm, which quickly after broke out; for Scroop's regiment of horse, quartered at Salisbury, having first ejected their officers, marched to join three other regiments that were in the same disposition (r); upon which Fairfax and Cromwell, with the troops that adhered to them, moved towards the mutineers with the utmost expedition, marching as the necessity of the case required, forty miles in one day. It is, however, very doubtful, whether all this vigilance, or even the valour of their victorious troops, would have done their business against these men, bred in the same school, and not at all inferior, either in firmness or fame, to themselves. In so nice and dangerous a case, therefore, Cromwell ventured upon a specifick which he seldom administered, that is to say, he deluded them with a treaty, broke it, and destroyed them (s) with

it seems, very much in use at that time, as he also had done the same, and it was resolved by them all, that *the King must die* (119). All the circumstances of this relation agree perfectly with the most authentic diaries of those times, by which fictitious stories are easily detected. Lady Fairfax charged the whole design of seeking the King's death upon Cromwell, at his Majesty's trial (120). Sir John Bowring told the King himself, during the Hampton-Court treaty, what Cromwell's intentions were; and Sir Peter Killigrew likewise told him, at the same place, that Cromwell meant to fetch him up to London, bring him to a trial there, and put him to death (121). Some have doubted whether the last was his original intention or not, for he never loved a Commonwealth, and therefore it is supposed, that he was the author of that paper-book of proposals offered to the King the evening before he died; which would have established the being of the Army most effectually, by putting it in their power to pay themselves, and, at the same time, rendering them perpetual (122). If this be true, as

indeed I think it cannot be disproved, the King shewed that his great patience did not proceed from want of spirit, for he presently rejected those terms, and resolved to die a martyr rather than live a cypher (123). But though, without Lieutenant-General Cromwell, this deed could not have been done, yet, when he had brought it so far, in order to try whether the King, who, by his last treaty, had consented to a never ending Parliament, might not be brought to change that for an everlasting Army, yet it might not be absolutely in his power to go back, nor was it, probably, ever in his will; since, how generally soever the death of the King was imputed to him, the saving of him might, and, in all appearance, would, have been attributed to others; which was so repugnant to his scheme, if we may judge from his former and future actions (124), that there appears not the least foundation to suppose he ever had a thought of consenting to it, nor is there anything like it suggested, by any of those who either commend or condemn him.

(123) See the King's speech at his death.

(124) Perin-chief's life of Charles the first, p. 93.

as little mercy as, in the High Court of Justice, he had shewn to the King or his friends [T]. After this great stroke he accompanied the General, first to Oxford (t), where they were made Doctors in the Civil Law, and thence to London, where they were splendidly entertained by the city, and had presents of great value when they took leave

(u). At this time England, if not quiet, was totally subdued, the Scots were discontented but not in arms, so that Ireland became the principal object of the Parliament's care, since, in that island, of three parties which had been for many years shedding each others blood, their own was the weakest. It was resolved to send over a compleat army of seventeen thousand men, for the soldiers were now so humbled, they might be sent any where, and to add weight to the new erected Commonwealth of England, by subduing this divided nation (w). One only difficulty remained, which was, to find a proper General. Fairfax was unwilling to go, Waller was talked of, then Fleetwood; but, upon naming Cromwell, a silent consent was given, a great majority approved, and the rest were afraid to oppose it (x). Historians seem at a loss for the motives which induced him to accept of this command, but they were, probably, these: he was willing to be relieved from the troublesome fatigue of inventing new schemes, to render himself useful to the Parliament, while, as yet, they had both credit and power; he was desirous of being at the head of an army in action, wherever it was, and he foresaw those distractions that would make such as were now glad to be rid of him, no less desirous to recal him (y). The Parliament seemed strongly inclined to make this service as acceptable as possible; for they gave him the title of Lord Lieutenant, a most extensive commission, and he was sent out of London with the greatest pomp imaginable. He embarked for Ireland in the month of August, and arrived at Dublin soon after the siege of that city was raised, and Ormond defeated (z). The great industry he had used, in providing all things necessary for this expedition, made his army wear another appearance than any of those that had been yet seen in Ireland; so that many places surrendered upon his approach; but Sir Arthur Aston being in Drogheda with two thousand five hundred men, all old troops, it was believed he would have detained the conqueror some time, and have allowed Ormond leisure to have drawn together a new army. But Cromwell, better acquainted with the real strength of places, and better provided with the means of reducing them than those who had gone before him in this war, declined a regular siege, and, observing where the place was weakest, employed all his artillery to open a passage. In a very short space of time two breaches were practicable, which Cromwell immediately stormed, September 16th, 1649; and though the garrison made a gallant defence, yet, by some accident, Cromwell's forces gained admittance, and, as he had before resolved, he put all that were to be met with to the sword, so that, at the out-side, there were but thirty escaped. The strong town of Wexford had the same, or, rather, a worse fate, for there abundance of unhappy women perished (a). His successes here, as in England, were seasoned with very few disappointments, though some he did meet with; and sickness and action having much reduced his Army, he was once in danger of being attacked with great advantage by Ormond; but that opportunity being lost, was never recovered (b). He did not put his forces into winter-

[T] And destroyed them with as little mercy, as, in the High Court of Justice, he had shewn to the King or his friends.] It is very observable, that though, in matters of difficulty and great importance, Cromwell was slow in taking his party, and yet more so in declaring it when taken, this conduct of his was entirely altered from the time he once declared; for he was then, generally speaking, not only as firm, but more forward than any, and this in matters that would have put the greatest difficulties upon another man. As for instance, he moved for a Committee to look into the proceedings at the trial of the King, in order to testify their concurrence and approbation, and actually reported this matter to the House himself (125). Upon the trial of Lord Capel, he made a speech as sensible as it was severe: he acknowledged that Lord had great courage, industry, and generosity; avowed a sincere personal esteem and respect for him; but then added, that the true question was, not whether they should spare the life of a single man? but, Whether they should preserve the most bitter and implacable enemy they ever had (126). When he marched against the Levellers, it was not only the Parliament's, but his own cause that was at stake, and therefore he pressed Lord Fairfax not to lose a moment's time; and indeed if any time had been lost, it is very probable that a new Civil War had begun; for Capt. Thompson, who had put himself at the head of these people, had drawn together near five thousand men, who, like himself, were determined; and the Manifesto they had published daily brought in more. To prevent, if possible, an action whence Cromwell foresaw the worst consequences imaginable, Col. Reynolds was allowed to

parley with them, and to give them hopes of a treaty. Under the sense of this being secure, they took the saddles off their horses, and put them into a meadow to feed; but, about twelve at night, they were attacked on all sides, and, being unable to form themselves, were easily defeated. A great many surrendered upon having quarter given them, who were the next morning spectators of the death of three of their Chiefs, one of whom was Thompson's brother: they all died with great courage and spirit. A message was then sent to the rest of the mutineers, that they should be decimated, that is, one in ten was to suffer death; but upon the heels of this came Lieutenant-General Cromwell, to let them know, that with much difficulty he had procured them pardon, by which he recovered the affection of the Army; neither is it at all improbable, that he brought the Lord General with him hither, that he might have an opportunity of doing this, which happened May 15, 1649 (127). As for Thompson, the Ringleader, he escaped the slaughter made of his companions, and threw himself into a wood, where, though much wounded, he defended himself desperately so long as he had any ammunition, and then, absolutely refusing quarter, was killed upon the spot. This broke the heart of that design, which might otherwise have given the Parliament a great deal of trouble, notwithstanding they had voted them rebels, for they were a sort of people not to be frightened with words. After this Cromwell pursued his point, and prevailed upon those regiments, most inclined to join the mutineers, to wipe out the memory of past offences, by consenting to go with him to Ireland, which accordingly they did (128).

quarters till the month of December; and the rainy season made it impossible for him to keep the field. He was in motion again in the beginning of February, and reduced several other places: not a few also revolted to him; and at last, in the beginning of March, he came before Kilkenny, which had been the chief seat of that bloody and barbarous rebellion, which he quickly reduced, and, not long after, Clonmell, by storm; so that by the month of June, 1650, all Ireland was, in a manner, subdued, and that in so short a space as nine months (c). A strange concurrence of circumstances made his presence now desired in England, not only by those who wished him well, but by such also as wished him worst. Constituting therefore his son-in-law Ireton his deputy, he took shipping for Bristol, where, after a dangerous passage, he safely arrived (d), leaving such a terror on the minds of the Irish, as made every thing easy to those who succeeded him, and compleated the conquest of that country [U]. Upon his return to London he came, as it were, in triumph, and all ranks of people contended, either from love or fear, who should shew him most respect. At his taking his seat in the House he had thanks returned him for his services, in terms as high as the Speaker's eloquence could reach (e). These ceremonies once over, they proceeded to things of greater consequence; for, by this time, the Parliament had another war upon their hands, the Scots having invited home King Charles II. and preparing an army to invade England. There is no doubt that the Parliament would have been content to have trusted this war to the conduct of Lord Fairfax, a brave man, and a good officer, though no profound politician; but he had always scruples, and, having been often deceived and deluded, was now not so easily dealt with (f). Cromwell made no secret of his sentiments, which were, that they should not wait for an invasion, but prevent it by an invasion, and in this, without question, he had the better side of the argument; but Lord Fairfax's conscience could not digest this reasoning: he had taken the Covenant, and, notwithstanding all the series of transactions he had run through, he could not bring himself to think of breaking it, by attacking the Scots in their own country (g). Cromwell, who had taken measure of his capacity, and knew that, as far as that went, he was inflexibly honest, carried his dissimulation to the greatest height, pressed him to continue in his command, declared he thought it a greater honour to serve as his Lieutenant-General, than to command the finest army in the world in chief; and, strange as this declaration was, he supported it with such a shew of sincerity, that Mr. Ludlow (h), who suspected him as much as any man, confesses that he was deceived, and that he thought himself obliged to interpose, and to desire that the Lieutenant-General would not suffer his complaisance to prove fatal to his country. This famous conference was held June 25th, 1650; and, though a whole month had been now spent in trying to get the better of Lord Fairfax's distaste to the expedition against the Scots, yet it was all in vain; so that June 26th an Ordinance passed for repealing his commission, and, at the same time, another for appointing Oliver Cromwell, Esq; General and Commander in Chief of all the forces of the Commonwealth (i). He had now as great power as might have satisfied the most ambitious mind; for, though he

[U] *Leaving such a terror on the minds of the Irish, as made every thing easy to those who succeeded him, and compleated the conquest of that country.* We have seen the share that Commissary-General Ireton had in affairs of the greatest importance and difficulty, where Cromwell had occasion for advice, and his hand was chiefly used in drawing all papers; for having been bred a Lawyer, he was much more capable in things of that nature than most of his party. He was very useful to his father-in-law in the course of the Irish war, and therefore it is no wonder that Cromwell committed the extinction of it to his care. Some writers, and more especially a famous Prelate (129), have indeed suggested that he was so far from being second to Cromwell, that he governed him, and that particularly in the business of the King's death he was the principal instrument, and drove the Lieutenant-General into it whether he would or not. Ludlow does not say this; but he seems to countenance such an opinion; for he was as great an admirer of Ireton, as he was an implacable enemy to Cromwell. If one could give entire credit to this, it might be reasonably presumed, that Cromwell left him his Deputy in Ireland, to prevent his embarrassing the measures he meant to take in England. But whoever considers attentively the characters of both these men, will not, I persuade myself, discover any real grounds for such suppositions. While Cromwell and Ireton dealt with the King, their behaviour was perfectly the same, that is to say, they dissembled alike, or, if there was any difference, Ireton did it the best of the two, whence one would naturally infer, that his principles were the same with Cromwell's: neither is it at all improbable, that, if they had

lived longer together, they would have agreed as well in the latter part of their lives as they did in the former (130). Upon the whole, therefore, the truth seems to be, that Cromwell made choice of him for Deputy, because he was at once the fittest man for that employment, and the person in the world he could best trust with it. If these were Cromwell's reasons, they were fully justified in the event; for Ireton did every thing that could be expected from him: he prosecuted the war with all the vigour and vigilance of a great officer, and settled also the civil affairs of the kingdom upon the best foundation possible. At the time of his death, there was an English army in Ireland of eight thousand horse and twenty-two thousand foot, and though the Irish had still some thousands in arms, and were possessed of several places of considerable strength, yet their counsels were so broken, their forces so dispirited, and they had so few resources left, (Cromwell, from a seeming spirit of compassion, having suffered multitudes to be transported abroad for the Spanish and other services) that notwithstanding what Ludlow tells us of his own exploits in that kingdom, there was really nothing to be done of any consequence; and as the reduction of Ireland was first rendered practicable by Cromwell, so with justice one can hardly say, it was compleated by any but Deputy Ireton and Lord Broghill, who were both of them, though from very different motives, equally attached to Cromwell and his family (131). We shall hereafter see that it was his policy to keep Ireland constantly in such hands; which, without doubt, was very necessary, since the army there would have been always formidable, if at the devotion of any but those on whom he could absolutely depend.

offered to resign his Lieutenancy of Ireland, yet the Parliament would not accept it. Being sensible, however, of the necessity there was to preserve the military affairs in that kingdom from falling again into confusion, and being desirous to remove out of his way any officer the Parliament might think capable of taking a superior command, he resolved to follow that impression which he perceived his late conduct had made upon Mr. Ludlow, and to procure his being sent to Ireland in quality of Lieutenant-General of the Horse; which was accordingly done (*k*). Experience afterwards taught Ludlow the true meaning of this; but, in all probability, he considered it, at that time, as a favour; and this the great admirers of Cromwell have justly considered, as an instance of his refined policy (*l*) [*W*]. All obstructions being now removed, he began his march towards Scotland, much about the same time that King Charles appeared there in public. The army which he commanded consisted of about twenty thousand men, which were the flower of the Parliament Army, and such as, with the change of a very few officers, General Cromwell could well depend upon (*m*). He used great expedition, and arrived in a month's time at Berwick, where he published a Declaration, importing, that the English had no intention to impose any form of government upon the inhabitants of Scotland, but engaged in this war purely upon a principle of self-defence. The Scots had destroyed all their own country, and withdrawn as many of their people as they could, so that from the time Cromwell entered it, his forces were much distressed; nor was the progress he made attended, for some time, with much greater success; for at Mulsleborough he was attacked in the night (*n*) with great fury, and was in no small danger of being defeated; notwithstanding which he continued his march towards Edinburgh, and came to the very walls of that city. The Army of the Scots Presbyterians, for it could scarcely be styled the King's Army, since they would not suffer him to be in it, was commanded by old Lesley, who shewed himself a very good officer; for being sensible, that his new-raised troops were not able to contend in the field with Cromwell's seasoned old soldiers, he kept them so well intrenched, that even Cromwell, who put his troops sometimes upon doing miracles, could not think of attacking him, but depended chiefly upon propagating discontents in the Scotch Army, which was easily done, and upon provoking them to fight, which he judged must, some time or other, have its effect (*o*). The first, indeed, Lesley could not prevent, though it gave him a great deal of trouble and disquiet; but the latter he hindered for some time, and thereby brought Cromwell's forces into great straits. They had once retreated to Dunbar, and thence advanced again to Mulsleborough; but this having no effect, the Scots growing daily stronger, and the English Army dwindling in the same proportion, Cromwell marched again to Dunbar, with a design, as is generally believed, of shipping his foot for England, and breaking through the Scots Army with his horse (*p*). But while he was meditating either this retreat, or a final attempt before he made it, the Scots changed their resolution at the request of their Ministers, who promised them, with a most enthusiastic vehemence, a complete victory; in confidence of which, against Lesley's advice, they determined to fight (*q*). General Cromwell who, in the night of September 2d, 1650, had also resolved in a Council of War, to attack them, observing, with a perspective glass, that they were in motion, declared, as if it had been through a spirit of prophecy, but in reality from his military skill, That God had delivered them into his hands (*r*). Their attack was furious; but Cromwell's foot stood so firm, that they were able to make but little impression; and the hurry of their own charge having thrown them into confusion, the English horse easily broke,

[*W*] As an instance of his refined policy.] It must be very clear to such as peruse what Mr. Ludlow has written, and who consider what General Cromwell had acted, that, if we except their bravery, there could not be two more different men in the world. Ludlow was sincerely and steadily a Republican. Cromwell was not wedded to any kind of Government, but of all kinds liked that the least. Ludlow spoke his mind plainly, and was never taken for any other than he professed himself to be: Cromwell valued himself upon acting a part, or rather upon acting several parts, and all of them equally well; and when he had occasion to perform that of a Commonwealth's-man, he performed it so admirably, that though Ludlow knew him to be a player by profession, yet he now thought he had thrown off the mask, and appeared what he really was (132). Ludlow was entirely devoted to the Parliament as now constituted, and would have implicitly obeyed their orders upon any occasion whatever: it was quite otherwise with Cromwell, who marched into Scotland to do his own business as well as theirs: from all which it may be inferred, that Cromwell sent Ludlow over to Ireland, that, in case of any accident, like that which actually happened of the King's sudden march into England, the Parliament might not have any officer at hand fit to command a new army, which

new army, being also composed of troops raised under their authority, might have given a check to his own. He well knew, that two armies in a country of any thing near equal force, is the same thing with having none, in case the civil authority and the voice of the people declare on one side; for then there will be no way left to keep the other army together, which would have been his case if Ludlow had ever had a Parliamentary army, and was actually the case of Lambert against Monk; for the latter prevailed only by his having the Parliament and the people on his side. In Ireland there was no such danger: Cromwell himself was Lord Lieutenant, Ireton was his Deputy, and therefore Ludlow could do little harm, for Ireton fooled him there as Cromwell had done in England; but when, through a change of circumstances, he might have become dangerous, we shall find that General Cromwell took notice of it in time, and sent over another person whom he could trust to take the command out of his hands, of which also Ludlow bitterly complained, though he does not seem to have apprehended fully the motives of that alteration (133). I have dwelt upon this as a proper instance of Cromwell's refined policy, of which also many others might be given, but, for the sake of brevity, these are left to the reader's own observation.

routed,

routed, and cut them off with prodigious slaughter: only one highland regiment of foot remained firm, and covered with their bodies the ground upon which they were posted, no more than twenty wounded men being taken prisoners out of eight hundred of which that corps consisted (s). Such was the famous victory of Dunbar, than which Cromwell never gained any more entire, or that did him greater credit as a Commander (t) [X]. After taking the necessary precautions, by sending away the prisoners, he returned to Edinburgh, where he met with no resistance except from the castle, which held out to Christmas-Eve, and was then surrendered, or, as some say, betrayed into his hands (u). He continued the war all the winter, and, in the beginning of the ensuing year, made dispositions for attacking the King, whom the Scots had now crowned, and provided with another army; but factions still continued amongst them, of which none knew better how to take advantage than Cromwell. In the Spring he was severely attacked by an ague, and this gave the English Parliament an opportunity of shewing an equal concern for his person and their own interests, which they expressed by sending down Dr. Wright and Dr. Bates, two eminent Physicians, to attend him, and large supplies of men and money for reinforcing his army (w). He quickly recovered his health, and in several small actions and sieges was constantly successful; but the King continued near Stirling with his army, now in a good measure under his command, in a strong camp, where Cromwell could not force him, and out of which he was resolved not to be drawn. At length, tired with this tedious manner of making war, Cromwell attacked and reduced Perth, which threw the King into great perplexity, so that, towards the end of July 1651, he resolved to take that which seemed to be his only advantage, a retreat from Cromwell into England, to which he was nearest (x). All who were about him concurred in this advice, excepting only the Marquis of Argyle, who told him, his fate would, in that case, depend upon a battle, where if he lost it, it would be in a country where he had no resource, and where, without a miracle, his person would be also lost; that he might still retire into Argyleshire, and thence, if any misfortune happened, into the Highlands, where,

[X] Or that did him greater credit as a Commander.]

The most satisfactory account that is to be met with of this battle, seems to be that given by Cromwell himself, in his letter to the Parliament, which not being easily met with, the reader cannot but be pleased to read the most remarkable facts in it, as delivered by himself (134). Upon Monday evening, the enemy, whose numbers were very great, as we hear about six thousand horse, and sixteen thousand foot at least; ours, drawn down as to sound men, about seven thousand five hundred foot, and three thousand five hundred horse. The enemy drew down to their right wing about two thirds of their left wing of horse, shogging also their foot and train much to the right, causing their right wing of horse to edge down towards the sea. We could not well imagine but that the enemy intended to attempt upon us, or to place themselves in a more exact condition of interposition. The Major General and myself coming to the Earl of Roxborough's house, and observing his posture, I told him I thought it did give us an opportunity to advantage to attempt upon the enemy, to which he immediately replied, that he had thought to have said the same thing to me, so that it pleased the Lord to set this apprehension upon both our hearts at the same instant. We called for General Monk, and shewed him the same thing, and coming to our quarter at night, and demonstrating our apprehensions to some of the Colonels, they also cheerfully concurred. We resolved therefore to put our business into this posture, that six regiments of horse, and three regiments and a half of foot, should march in the van, and that the Major-General, the Lieutenant-General of the horse, and the Commissary-General and Colonel Monk to command the brigade of foot, should lead on the business; and that Col. Pride's brigade, Col. Overton's brigade, and the remaining two regiments of horse, should bring up the cannon and rear, the time of falling on to be by break of day; but, by some delay, it proved not to be 'till six o'clock in the morning. The enemy's word was *the Covenant*, which they had used for divers days; ours *the Lord of Hosts*. The Major-General, Lieutenant-General Fleetwood, and Commissary-General Whalley, and Col. Twissleton, gave the onset; the enemy being in very good posture to receive them, having the advantage, their cannon and foot against our horse, and before our foot could come up the enemy made a gallant resistance. And there was a very hot dispute,

at sword's point, between our horse and theirs. Our first foot, after they had discharged their first fury, being over-powered with the enemy, received some repulse, which they soon recovered; but my own regiment, under the command of Lieutenant-Colonel Goff and my Major White, did come seasonably in, and at push of pike did repel the stoutest regiment the enemy had there, merely with the courage which the Lord was pleased to give, which proved a great amazement to the residue of their foot, this being the first action between the foot: the horse in the mean time did, with a great deal of courage and spirit, beat back all opposition, charging through the bodies of the enemies horse and their foot, who were after the first repulse given, made, by the Lord of Hosts, as stubble to their swords. Indeed I believe I may speak it without partiality, both your Chief Commanders and others in their several places, and soldiers also, were acted with as much courage, as ever hath been seen in any action since this war. I know they look not to be named, and therefore I forbear particulars. The best of the enemy's horse and foot being broken through and through in less than an hour's dispute, their whole army being put into confusion, it became a total rout, our men having the chase and execution of them near eight miles. We believe that upon the place, and near about it, were three thousand slain; prisoners taken of their officers, you have this inclosed list; of private soldiers, near ten thousand; the whole baggage and train taken, in which was good store of match, powder, and bullet; all their artillery great and small; thirty guns. We are confident they have left behind them no less than fifteen thousand arms. I have already brought unto me near two hundred colours, which I herewith send you. What officers of quality of theirs are killed, we yet cannot learn, but yet surely divers are, and many men of quality are mortally wounded, as Col. Lumisdale, the Lord Libberton, and others; and that which is no small addition, I believe we have not lost twenty men; not one commissioned officer slain as I hear of, save one Cornet, and Major Rooksby since dead of his wounds; and not many mortally wounded; Col. Whalley only cut in the hand, wrist, and his horse twice shot, and killed under him, but he well recovered another horse, and went on in his chase. Thus you have the prospect of one of the most signal mercies God hath done for England and his people this war.'

while there were men, he would never want an army (y). This moved the King, and him only: the rest were determined, and prevailed upon him to begin his march southward, as he did on the last of July (z). The news of his coming into England alarmed the Parliament at Westminster exceedingly, and put them upon augmenting their army with many thousand men. The rapidity of the King's march brought him to Worcester before Cromwell could overtake him; but in the mean time the gallant Earl of Derby, who was marching to his assistance, was routed and taken; and soon after General Cromwell blocked him up in Worcester, where, on the 3d of September, he attacked and carried the place, totally defeated the King's forces, and gained that which himself called, in his letter to the Parliament, the crowning victory (a) [Z]. He did not remain long with the troops: for having seen the walls of Worcester demolished, and directing some thousands of prisoners to be driven before him, he began his march, as it were, in triumph for London. He met four Commissioners from the Parliament not far from Aylesbury, and, when he came to Acton, the Speaker, the House, and the Council of State, met him in form, as did soon after the Lord Mayor, Aldermen, and Sheriffs, and with all this pomp he proceeded to Whitehall, where, having reposed himself a little, September the 16th, he took his place in the House, where his great achievements were again the subject of Lenthall's eloquence; and the same day he dined upon a solemn invitation in the city (b). Yet these, though great, were far from being the most considerable marks of honour that were paid him. A general thanksgiving was appointed for his victory, and the 3d of September appointed an anniversary State holiday: he had besides four thousand pounds a year voted him out of the estates of the Duke of Buckingham and Marquis of Worcester (c). When these ceremonies and acknowledgments were over, he had leisure to look about him, and to consider as well his own condition as that of the nation. He saw himself at present General and Commander in Chief of a great army in England, and, at the same time, Lord Lieutenant of Ireland; but then he knew that all this was derived to him from the Parliament; and he clearly discerned that, whether Independents or Presbyterians sat there, they would endeavour to perpetuate supreme power in their own hands, which, for many reasons, he disliked; and therefore he sifted the most eminent persons, in order to find out their sentiments about the establishment of the kingdom, which was a new phrase invented to cover the design of subverting the Parliament (d). In reference to this he found, that different men had different opinions, all concurring in part, but not in the whole, with his own [Z]. As it was not yet time for him

[Y] *The crowning victory.* In this battle of Worcester Cromwell gave very high proofs of his personal courage, and that for a generous purpose, since he exposed himself extremely to offer quarter to the Scots who defended the Fort Royal, with a view only of preventing the unnecessary effusion of blood amongst his own troops, for his proposition being refused, and the place taken, he directed all that were in it to be put to the sword (135). He likewise shewed his impartiality in commending the courage of the King, who charged with the Scots foot, and gained some advantage even over Cromwell's guards (136): but the Scots horse, under the command of Lesley, behaved basely. There needed not much of conduct in the business, for besides that they were certainly better troops, Cromwell had also the advantage in numbers, the King's army consisting but of sixteen thousand, and that of the Parliament of twenty-eight thousand (137). It is said that Cromwell treated the militia but indifferently, though they contributed much to the victory; but in his letter to the Parliament he acknowledges their great services, in as clear and as strong terms as could be expected. There is no doubt that this was as signal and compleat a stroke of success, as even the ambitious heart of Cromwell could desire, and therefore it is no great wonder that it took him a little off his guard, as it certainly did. He would have knighted two of his principal Commanders upon the field of battle, and was with great difficulty dissuaded from it (138). His letter to the Parliament is conceived in more stiff and lofty terms than any of his former writings. Ludlow says that his behaviour was altered from that day, and that all who were about him observed it (139). Perhaps it would be nearer the truth to say, it was altered upon that day and the next, for he very soon recovered himself, and shewed as much submission and humility as ever. He treated his prisoners with great severity, and it is thought would have brought Maffey and Middleton to the scaffold, if they had not had the good luck to escape. He was now compleatly master of the Army,

which expected its continuance and the payment of all arrears from his weight and influence, which opinion he took care to encourage, and gave them frequent assurances, that they might much better depend upon him than upon their old resource of Agitators (140). All his conduct afterwards was of a piece with this, and he took all the care imaginable to make the Army sensible of their own importance, and to let them see that nothing could divide their interests from his own, which was the true foundation of his growing greatness, and of the gradual declension of the Parliament's power, which, though they clearly discerned, they knew not how to prevent.

[Z] *But not in the whole with his own.* After the great victory of Worcester, General Cromwell took a new text, upon which he preached with wonderful eloquence upon all occasions, and this was, *the necessity of an establishment*. There had been a great deal of fighting, and now the fighting was over, he thought the conquerors ought to know what they had been fighting for (141). In a meeting among the principal persons in power, held about three months afterwards, he proposed the question fairly (142), when St. John, Whitlocke, Lenthall, and Sir Thomas Widdrington, declared plainly for monarchy, Harrison, Desborough, and Whalley, as plainly for a Commonwealth. Cromwell did not think fit to discover his own opinion with the like clearness, but expressed a desire of knowing, if a Monarchy was necessary, Who was to be that Monarch? Sir Thomas Widdrington answered directly, one of the late King's sons, and proposed the Duke of Gloucester then in their power. To this Whitlocke demurred, and was for inviting the two elder brothers; but this being nothing to Cromwell's design, he soon broke up that conference. Upon the 7th of Nov. 1652, meeting the Lord Commissioner Whitlocke in the Park, he entered into a long discourse with him upon this important subject, in which the part that Cromwell took was this (143): he shewed him that the Parliament was now become a faction; that they were resolved to rule all, and to rule for ever, merely

him to declare himself plainly, he made it his business to entertain as fair a correspondence as possible with all parties. He behaved in public with great decency and duty towards that body of men he was contriving to remove, but held a private correspondence with every one of the parties that were caballing against them, by which he was in all their secrets, as they probably thought they were in his, but in that they were deceived; he never had but one confident, and that confident was gone. This was his son-in-law Ireton, whom he had placed at the head of affairs in Ireland, where he died of the plague (e). It was of great importance to him to substitute another there as much devoted to his service; but the thing was difficult. The Parliament had cast their eyes upon Lambert, who was to govern with the title of Lord Deputy; but ways and means were found to change their resolution as to the title, though not as to the man: but as he rightly foresaw, the change of the one produced the change of the other; for Lambert, who would have been proud of being Deputy, disdained to go thither as a Commissioner (f). Under these circumstances the ordinance appointing Cromwell Lord Lieutenant of that kingdom determined, which he very prudently declined to renew, but instead of it got the ordinance appointing him Captain-General and Commander in Chief in England, extended by another ordinance to Ireland; and thus he had the power without the name: but as he never meant to go thither again in person, he gave his daughter, Mrs. Ireton, in marriage to Colonel Fleetwood, a man entirely under his direction, whom he procured to be declared Lieutenant-General of the forces in Ireland; by which the great point he aimed at was fully attained (g). This dexterity in his management became very soon after obvious enough, though little notice was taken of it at the time; which shewed the deep reach of his politicks, and how much his abilities were in reality superior to those of the persons he had to do with, who, with all the good-will in the world to oppose him, found themselves, at every turn, the dupes of his designs, which at the bottom were just as honest as their own (h). As a proof of this we may observe, that the very person worst treated in this affair, that is, General Lambert, not only misplaced his resentment, and grew disaffected to the Parliament, but suffered himself to be so far cajoled by Cromwell, as to believe, that he thought him worthier than to be sent to Ireland upon any terms, and that if any thing should happen to himself, he sincerely wished him for his successor, how eminent soever his station might be (i). All the winter of the year 1652 was spent in cabals and contrivances on both sides, that is, by the friends of the Parliament, to support and sustain its authority, and, by their opponents, to bring things into such a situation, as might render the necessity of dissolving that assembly universally apparent. But while all this was doing, General Cromwell neglected nothing that might establish hopes of favour from him, and of benefit to their respective causes in all the parties then subsisting in the nation; which, considering the diversity of principles on which they acted, and their inveteracy against each other, must appear a thing almost incredible (k) [AA]. As the Spring advanced

for their own sakes; that they gave all employments to themselves, their relations, or friends; that they drew every thing within their own cognizance, by which the subject lost the benefit of the law, and held his property but by a precarious tenure; that, all this considered, they had fought themselves into a worse condition, and that, instead of a Monarch with a prerogative royal, they had now many masters who made laws and broke them at their pleasure; that, on the other hand, the Army was very sensible of this; that they bore it with great reluctance; that they too had great disputes amongst themselves; and that it could not be long before these mischiefs broke out into a new flame. Whitlocke very readily agreed, that he had described both parties truly, but, at the same time, acknowledged, that, notwithstanding he was acquainted with the diseases of the Commonwealth, he was entirely ignorant of any right method of cure. What, said Cromwell, if a man should take upon himself to be King? Whitlocke undertook to shew him, that he would get nothing by it, that he had more power already than former Kings ever had, and that by assuming the name he might run a great hazard of losing the thing. Cromwell then pressed to know, What he would have done? upon which, as before, the Lord Commissioner propounded compromising matters with Charles Stuart, the debating of which Cromwell declined, as being a matter of much difficulty. There is no doubt but that he had many conversations of this sort with the most intelligent of all parties; but we shall mention only one more, and that for two reasons; first, because it shews us that he was perfectly aware of what is suggested in the text, that those who hated each other extremely, all concurred in still hating him with greater inveteracy; for as the

Vol. IV.

Royalists detested his person, so the Republicans abhorred his power. Secondly, because it is reported upon good authority, having been often related by Mr. Henry Nevil, a celebrated Politician, and once a Member of the Council of State. He was wont to tell it thus (144): 'That Cromwell upon this great occasion sent for some of the chief city Divines, as if he made it a matter of conscience to be determined by their advice. Among these was the leading Mr. Calamy, who very boldly opposed the project of Mr. Cromwell's single government, and offered to prove it both unlawful and impracticable. Cromwell answered readily upon the first head of unlawful, and appealed to the safety of the nation being the supreme law. But, says he, pray Mr. Calamy why impracticable? Calamy replied, Oh 'tis against the voice of the nation, there will be nine in ten against you. Very well, says Cromwell, but what if I should disarm the nine, and put a sword into the tenth man's hand, Would not that do the business?' [AA] Must appear a thing almost incredible.] It cannot but be satisfactory to the inquisitive reader to see this point a little more fully explained, the chief difficulty lying in this, that the inveteracy of people in those times was so great, as to render it next to impossible, to shew the least favour to any one party, without irritating all the rest. The path indeed was narrow, and precipices there were on every side; yet Cromwell had the courage to venture himself in this path, and so great conduct as to pass through it without making one false step. He never courted the Cavaliers directly, but, upon particular occasions, and under a variety of pretences, he did many of them signal services, and generally spoke of them as men of honour acting upon mistaken principles; exclaiming at

advanced this great affair began to ripen: the people in different parts of the nation, and the Army in general, began to murmur at the amazing stretch of power which the Parliament, though so thin of Members, assumed to themselves, which sometimes the General encouraged, and at others repressed; as for instance, when it was debated in the Council of Officers, whether they should petition the Parliament to turn their vote into a bill for their own dissolution, Cromwell sent Colonel Desborough, who had married a sister of his, to put an end to that debate, in which he declared, in express terms, against using any violence, and at the same time ran out into the highest commendations of that Assembly (l). But afterwards perceiving, that the party against them in the Army was growing daily stronger, and that, on the other hand, the Parliament, having gotten both courage and credit from their success in the Dutch war, were contriving to set up the Fleet against the Army, and to diminish the power of the one, and to augment that of the other, had ordered part of the Army on board the Fleet, he found himself obliged to make more haste (m). On the 19th of April, 1653, he called a Council of Officers, once more to debate this point, in which as he had many friends, so he had also some opponents, who insinuated, that what he did proceeded from self-interest and ambition. Major-General Harrison, a zealous Fanatick, but absolutely deceived by Cromwell, assured the Assembly, in the sincerity of his heart, That the Lord General sought only to pave the way for the government of Jesus and his Saints, to which Major Streater briskly returned, That then he ought to come quickly, for if it was after Christmas, he would come too late (n). Upon this Cromwell adjourned the meeting till the next morning, when a new point was started, whether it might not be expedient for the House and the Army to appoint twenty persons of a side, to be intrusted with the supreme power. In the midst of this dispute advice came, that the House had under consideration their own dissolution, and upon this such as were Members withdrew, and went thither to promote that design. But in reality the Parliament had framed a bill, to continue themselves to the 5th of November in the next year, proposing, in the mean time, to fill up the House by new elections (o). Colonel Ingoldsby came back to the General, and informed him what the House was upon: at which the General, who expected they should have meddled with no other business but putting an immediate period to their own sitting, without any more delay, was so enraged, that he immediately commanded some of the officers to fetch a party of soldiers, to the number of three hundred, with which marching directly to Westminster, he placed some of them at the door, some in the lobby, and others on the stairs (p). Himself going into the House, first addressed himself to his friend St. John, and told him, That he then came to do that which grieved him to the very soul, and what he had earnestly with tears prayed to God against; nay, that he had rather be torn in pieces than do it; but that there was a necessity laid upon him therein, in order to the glory of God, and the good of the nation (q). Then he sat down, and heard their debates for some time on the fore-mentioned act; after which calling to Major-General Harrison, who was on the other side of the House, to come to him, he told him, That he judged the Parliament ripe for a dissolution, and this to be the time of doing it (r). Harrison answered, Sir, the work is very great and dangerous, therefore I desire you seriously to consider of it, before you engage in it. You say well, replied the General, and thereupon sat still for about a quarter of an hour; and then the question for passing the said act being put, he said again to Harrison, This is the time, I must do it: and so standing up on a sudden, he had the Speaker leave the chair, and told the House, That they had sitten long enough, unless they had done more good; that some of them were whoremasters, looking then towards Harry Martin and Sir Peter Wentworth; that others of them were drunkards, and some corrupt and unjust men, and scandalous to the profession of the gospel; and that it was not fit they should sit as a Parliament any longer, and therefore he must desire them to go away (s). He charged them with not having a heart to do any thing for the

prudence and probity, which, the then situation of things considered, was very acceptable doctrine. His real design, however, he closely concealed; so that all who were desirous of a change expected it from him, and at the same time flattered themselves with the hopes that it would be such a change as they wished. In every thing he said and did, he had a manner that seemed to manifest the greatest sincerity; and yet there was so much of caution in all his words and actions, that he knew how to interpret the one, and to account for the other, in such a way, that no hold could be taken of them to his disadvantage. In short, he never expressed resentment against any but it was followed with destruction, so as to leave them no capacity of revenge; and wherever he conferred obligations, it was in a way so high and so generous, that as he never bestowed them on unworthy objects, so the memory of them was never lost, or himself deceived as to their effects (147).

(147) See Maurice's Memoirs of Lord Broghill, Winstanley's Select Lives of English Worthies, p. 596, 597.

public

public good, and espousing the interest of Presbytery and the Lawyers, who were the supporters of tyranny and oppression, and accused them of an intention to perpetuate themselves in power. When some of the Members began to speak, he stepped into the midst of the House, and said, Come, come, I will put an end to your prating; then walking up and down the House, he cried out, You are no Parliament, I say you are no Parliament, and, stamping with his feet, he bad them for shame begone, and give place to honest men (t). Upon this signal the soldiers entered the House, and he bad one of them take away that bauble, meaning the mace; and Harrison taking the Speaker by the arm, he came down. Then the General, addressing himself again to the Members, who were about a hundred, said, 'Tis you that have forced me to this; for I have sought the Lord night and day, that he would rather slay me than put me upon the doing of this work. And then seizing on all their papers, he ordered the soldiers to see the House cleared of all Members, and, having caused the doors to be locked up, went away to Whitehall (u). With the same spirit he proceeded to turn out the Council of State, and to take such other measures as appeared to him the most proper, for the support of that great authority he had attained, preserving the affection of the Army, and keeping peace and quietness in the nation [BB]. He continued, for a few days, to direct all things by the advice of the Council of Officers, where he professed his own painful sense of the vast burthen laid upon his shoulders, and how desirous he was to remove it; but finding, by the speeches of some of them, he might probably be taken at his word, he first excited them to discover, and then so effectually exposed their different, contradictory, and irreconcilable sentiments as to Government, that they were at last glad to propose a new Council of State, in which the supreme authority was vested (w); and then published a very rational and well-drawn declaration, dated April 22d, in which they gave the fairest colours possible to the late dissolution, and promised that a new representative should be called (x). This was accordingly done, by virtue of letters or warrants under the Lord General's hand. This Assembly consisted of one hundred forty-two persons, and met July the 4th, in the Council-Chamber at Whitehall, where Cromwell told them, that they had a clear call to take upon them the supreme authority; which they did without ceremony, and elected Francis Rous, Esq; Provost of Eton, their Speaker. This, from its narrowness in point of numbers, was stiled the little, from its manner of proceeding, the godly, and from the pragmatistical behaviour of one Praise-God Barebone, a Leatherfeller in the city, Barebone's Parliament. This Assembly sat long enough to do Cromwell's business and their own; for the majority of them being Fifth Monarchy-men, threatened total destruction to the Ministry, and the Lawyers; and took such strange steps with re-

[BB] *And keeping peace and quietness in the nation.*

When General Cromwell came back to Whitehall he found a Council of Officers still assembled, and this grand point yet in debate, upon which he told them roundly, they need trouble themselves no farther about it, for he had done it. Col. Okey, who was none of his creatures, demanded immediately What he had done? and, when he had told him, expostulated the point warmly; but Cromwell talked so much louder than he, of the glory of God and the good of the nation, the removing of yokes and badges of slavery, that he very soon thought proper to be silent, and to wait for the conclusion of this affair, in order to distinguish from his actions, what were Cromwell's real intentions in so bold an action (148). In the afternoon of the same day, Cromwell, attended by the Majors-General Lambert and Harrison, went to the Council of State, and finding them sitting, addressed them in the following terms: 'Gentlemen, if you are met here as private persons you shall not be disturbed, but if as a Council of State, this is no place for you. And since you cannot but know what was done at the House this morning, so take notice, that the Parliament is dissolved.' Serjeant Bradshaw boldly answered, 'Sir, we have heard what you did at the House in the morning, and, before many hours, all England will hear it. But, Sir, you are mistaken to think that the Parliament is dissolved, for no power under Heaven can dissolve them but themselves, therefore take you notice of that.' Some others also spoke to the same purpose: But the Council finding themselves to be under the same force, they all quietly departed (149). The true reason why General Cromwell dismissed, in that manner, this Council of State, was, because he intended to have another of his own construction, these as they derived their authority from, being men entirely devoted to the Parliament. It cannot be supposed that such a transaction as this should pass in silence, or that the persons ejected, and their friends

and creatures, should not make a very great noise, as indeed they did, representing this act of Cromwell's as the most insolent violation of the supreme authority that could be practised or imagined (150). To prevent any impression that these invectives might otherwise make, some were employed to tell the people, that these men had no reason to complain; that themselves had taken pains to shew the nation that there was no authority inviolable in its nature, that they had themselves fled to the Army, and by the assistance of the Army purged their own House at their pleasure; that they had taken away the Upper House of Parliament without any other law than their will; and that in all their proceedings they had been by far more arbitrary, than any Monarch that ever filled the English throne, and this without any other colour of right than what was derived to them from their own vote. The Royalists took this advantage also to descant upon public affairs, and without much ceremony treated the dispersed Parliament as a herd of usurpers, exhausting the wealth, and trampling upon the liberties of the people, who could only be delivered by one who had superior power in his hands, and who in this instance had made the right use of it (151). When such discourses had been thoroughly spread, and the General afterwards proceeded to some popular acts, such as reducing the tax from one hundred and twenty thousand pounds to ninety thousand pounds a month, and had emitted the Declaration mentioned in the text, it was presently approved by addresses from the fleet and army, as well as from different parts of the kingdom, which was called the voice of the nation: and, by the way, it may not be amiss to take notice, that this was the first rise of addresses (152), which very clearly shews how great a politician Cromwell was, and how much better skilled in the art of giving a fair colour to all his proceedings than is generally imagined.

gard to the Dutch Ambassadors, that they were absolutely at a loss how to deal with them; so that all parties (except their own small one) being heartily tired with these Legislators, some of themselves, who were in the secret, met early on the 12th of December, and agreed to surrender up their power to Cromwell, from whom it came (y). Major-General Harrison, and about twenty more, remained in the House, and seeing the reign of the Saints at an end, placed one Mr. Moyer in the Speaker's chair, and began to draw up protests; but they were soon interrupted by Colonel White, with a party of soldiers; who asking them what they did there, they told him, They were seeking the Lord: to this he replied, That, to his knowledge, the Lord had not been fought there many years, and so fairly turned them out of doors (z). The scene thus changed, the supreme power was said to be in the Council of Officers again, and they very speedily resolved, that the Lord General, with a select Council, should have the administration of public affairs, upon the terms contained in a paper, intituled, The INSTRUMENT OF GOVERNMENT; and that his Excellency should be Protector of the Commonwealth of England, Scotland, and Ireland, and have the title of Highness; and accordingly he was invested therewith on the 16th of December, in the Court of Chancery in Westminster-Hall, with great solemnity (a). When he had thus reduced the Government into some order, he proceeded very wisely and warily; appointed a Privy-Council, in which there were several great and worthy men, who, he knew, would either not act at all, or not act very long with him; but their names giving a sanction for the present, he proceeded, with the advice of so many of this Council as attended upon him, to make several ordinances that were necessary, as also to dispose matters for the holding a new Parliament (b).

Thus, in the fifty-fourth year of his age, he assumed sovereign power, and exercised it with great dignity; and though he well knew, that all obedience to him rose from fear, and that his danger was nearly equal from all parties, yet, by his prudent management, he left none the capacity of hurting him [CC]. He applied himself immediately to the settlement of the public affairs, both foreign and domestic; he concluded a peace with the States of Holland, in which the point of the flag was carried pretty high, satisfaction was promised for the barbarous massacre at Amboyna, the restitution of Polleroon, and other things that were never complied with (c). In this treaty the King of Denmark got himself included: the Lord Commissioner Whitlocke made a firm peace with Sweden: the King of

[CC] *Though by his prudent management he left none the capacity of hurting him.* Immediately after his turning out the Long Parliament, when, as we before observed, all parties took the liberty of speaking, and some places that of addressing, which those who liked the contents called the sense of the people; some there were in the counties near London that talked of a King, and this hint some people had a mind to improve; for which purpose, on Tuesday the seventeenth of May in the forenoon (153), about 'Change time, a Gentleman extremely well dressed came in a coach to the Royal Exchange, where, taking out of his coach the General's picture, he fixed it against one of the pillars, and after making two or three turns, took coach again and drove away. Over the head of the pourtrait stood these words, 'Tis I; and underneath were the following verses:

*Ascend three thrones, great Captain and Divine,
By the will of God, (*) O Lyon, for they're thine:
Come Priest of God, bring oil, bring robes, bring gold,
Bring crowns and sceptres; 'tis high time I' unfold
Your cloister'd bags, ye State Cheats, lest the rod
Of steel and iron, of this your King and God,
Pay you in 's wrath with interest; kneel and pray,
To Oliver, the Torch of Sion! the Star of day!
Shout then ye Merchants, City and Gentry sing,
And all bare-headed cry, God save the King!*

As soon as exchange time was over the Lord Mayor caused the picture to be taken down, and carried it directly to the Lord General at Whitehall. Some writers mention this as a libel upon Cromwell (154); but in those days, when the thing was most likely to be understood, it was believed that the fox was the finder, and that the Lord Mayor himself, not without the privy of the Lord General, set up this picture on the Royal Exchange by way of a political weather-cock, to see in what corner the popular wind sat (155). Indeed, why might not my Lord Mayor ask the citizens upon 'Change the same question that Cromwell did Whitlocke in St. James's Park, *What if a man should take upon himself to be King?* When it was found this scheme could not be brought to bear, then

the calling an assembly by way of Parliament was the next step, and for this the Lord General had three good reasons; the first was, that it might appear that he made a distinction between disliking the Rump, and discarding Parliaments: the next, that upon their sinking again into nothing, he might receive his power back from them, as it were by form of law; and, lastly, that by making the Fifth Monarchy men, who were predominant in this Parliament, both odious and ridiculous, he might have the less to fear from them, and withal the greater support from the Clergy and Lawyers, for that Parliament had fairly voted that tythes were a relic of Judaism, that the Common-Law was a badge of slavery; and, on the other hand, that the Court of Chancery ought to be abolished; and thus, to all the thinking part of the world, it was made evident that the Saints, having no sense, were not fit to govern (156). The task he now undertook, of governing as a Monarch with a Council, was still harder than all the rest; and yet he seemed to manage it with the same ease, for he still continued to practise upon all parties by their hopes and fears. As to the Cavaliers, he intimated that he was not irreconcilable to those who should give proofs of their affection to his government; that he meant not to hurt or oppress those who were inclined to live quietly; but that if any attempted to assassinate him, he had those at his command who should immediately repay that by taking off whole families (157). He encouraged and protected the Presbyterians that submitted, and delivered up those who opposed him to be worried by the sectaries. He maintained his old language to the Fifth Monarchy men: he said things were not ripe for the Saints to take the rule of the earth, and that in the mean time he was so far from taking the sceptre, that he had only taken the Constable's staff, in order to keep the peace, and prevent the people from cutting one another's throats. As for the sensible Republicans he knew them to be irreconcilable, and therefore he signified to them, that if they would live quietly they might, but that if they disturbed his government he would make them feel the weight of his power, which he knew by experience was the only way to keep them in order (158).

Portugal also, notwithstanding all that had passed between him and the Parliament, was obliged to accept of peace upon his terms. But matters were not so easily adjusted with France, though, from the very beginning, that Crown paid the Protector great court, from an apprehension, it is said, that he meant to marry one of his daughters to the Prince of Conde, which would have engaged him on the side of the Spaniards (*d*); but for this, perhaps, there never was any great foundation. By degrees, however, he impressed such an opinion of the great importance of his friendship, both upon France and Spain, that the two crowns contended for it, with an earnestness that made them both ridiculous [DD]. In reference to affairs at home, he filled the Courts of Westminster-Hall with very able Judges; and directed the Lawyers themselves to make such corrections in the practice of their profession, as might, in some measure, free them from public odium; which had a good effect. The same moderation he practised in Church affairs, affecting to carry himself equally between the Presbyterians and Independants, but professing an unalterable resolution of maintaining liberty of conscience (*e*). He laboured by degrees to purge the Anabaptists out of the army, dismissing from their commands such officers as he could not confide in. He gave the command of all the forces in Scotland to General Monk, and sent his son Henry to govern Ireland (*f*). He by an ordinance, dated April 12th, 1654, united England and Scotland, fixing the number of representatives for the latter at thirty, and soon after he did the same by Ireland (*g*). He shewed great zeal for justice, in causing the brother of the Ambassador from Portugal to be executed for murder, occasioned by a quarrel that he had with one Colonel Gerrard. Upon pretence of a conspiracy against himself, he procured several persons to be convicted and condemned by a High Court of Justice, of which Major Lisle was president; and it is very remarkable, that the Portuguese Gentleman before-mentioned, who murdered another Gentleman by mistake, never saw his antagonist Colonel Gerrard again till they both came to lose their heads together on a scaffold at Tower-Hill, July the 10th, the former for that murder, the latter for this conspiracy, which he denied with his last breath; and shewed as much courage upon that melancholy occasion, as his fellow-sufferer did the want of it (*h*). The same day one Mr. Vowell, a schoolmaster, was executed for the plot at Charing-Cross; which he likewise denied, dying with heroic constancy, and reproaching the Guards for being instruments of tyranny and injustice, by assisting at his execution, which, he asserted, was against law, because without a crime (*i*). But, notwithstanding all these successes, and all the pains the Protector could take to conciliate the affections of the people, he found a great spirit stirring against him in all the three kingdoms, and his government so cramp for want of money, that he was under an absolute necessity of calling a Parliament, according to the form which he had prescribed in the *Instrument of Government* (*k*); and which though it put much in his power, and left the decision of disputed elections to his council, yet, as it remained still some sort of representative of the nation, he was not without apprehensions of their not proving so tractable as he could wish; and the event proved, that his suspicions were not without grounds (*l*). He fixed upon the third of September for the day on which they were to assemble, esteeming it particularly fortunate to him; and to this he peremptorily adhered, though it happened to fall upon a Sunday. The Parliament was accordingly opened on that day, after hearing a sermon at Westminster-Abbey, to which the Protector went in very great state (*m*). He received this House

[DD] *That made them both ridiculous.*] In this note we shall give some account of the Protector's conduct with respect to foreign courts, at his first entering on that office. His peace with Holland has been very much magnified by some, whereas others affirm, that he was bribed by the Dutch to make it upon the terms he did (159). These facts are certain, that the Parliament stood upon higher terms; that the English fleet beat that of the States twice after the Parliament was turned out; and that the expulsion of King Charles and his followers, with the exclusion of the Prince of Orange, were points particularly insisted on by Cromwell (160). The Queen of Sweden paid great respect to the Rump, and as great to Oliver, who, to express his regard for her on the other side, hung her picture in his bed-chamber, which the laughers in those times said, made the Lady Elizabeth Cromwell, the Protector's consort, not a little jealous (161); and yet it was not long after, that one of his agents wrote the Protector a very serious account of Queen Christina's being inclined to marry Charles Stuart; but that was after her abdication, and no question one story was as true as the other (162). The Kings of Denmark and Portugal the Protector treated very haughtily, and obliged the Ambassador of the latter to come and sign the peace at Whitehall the very morning his brother was executed on Tower-hill. He refused the title of cousin from the French King, expecting that of brother; and so artfully played the Spaniard against him

VOL. IV.

at a very critical conjuncture, when the French were laying the ground-work of that power which has been since so fatal to Europe, that both Ambassadors made such extraordinary advances, with so many singular acts of submission, that the Dutch struck a medal (163) with the bust of Cromwell and his titles on one side, with Britannia on the other, and Cromwell thrusting his head in her bosom, with his breeches down and his backside bare, the Spanish Ambassador stooping to kiss it, while the French Ambassador holds him by the arm with these words inscribed, *Retire toi l'honneur appartient au Roi mon maitre*, i. e. Come back, that honour belongs to the King my master. It is true this medal was not struck till two years afterwards; but as the structure of this work obliges us to place together things of a like nature, we chose to mention it here, the rather, because I find no mention of it in any of the Histories of Cromwell: but there is reason to suspect it might occasion that mistake, which appears in a private letter intercepted in those times, where it is said, that a print had been handed about beyond the sea, representing Cromwell sitting upon a close-stool, the King of France on the right-hand, and the King of Spain on the left, offering each a supply of paper for his present occasions (164). There have been many curious collections of prints made since, but I never heard of any such thing amongst them, whereas the medal is yet preserved in several Dutch cabinets.

of Commons in the Painted Chamber, where he made them a very long and a very sensible speech, in which he gave them a large account of the nature of that government which he had thought fit to establish, the ends he proposed, and the means he had used to compass those ends. He took great pains to shew them the folly of extravagant notions about liberty, civil and religious; told them to what purpose he had called them together, and promised to allow them all imaginable freedom in their debates on public affairs (n). When they came to their House, they elected Mr. William Lenthall their Speaker, but did not present him; next they fell to debating, whether the supreme legislative power of the kingdom should be in a single person, or a Parliament? This alarmed the Protector, who found himself in danger of being deposed by a vote of this new Parliament; to prevent which, on the twelfth of the same month, he caused a guard to be set at the door, to prevent their going into the House of Commons, then sent for them into the Painted Chamber, where he gave them a very sharp reproof; nor were any permitted to go into the House afterwards, before they had taken an oath to be faithful to the Protector, and his government; and though this excluded a great number, yet the new courtiers were still a minority (o). While this Parliament was sitting, an odd accident happened to the Protector. He had received a set of Friezland horses from the Duke of Holstein as a present, and would needs drive his Secretary Thurloe in his coach, drawn by these horses, round Hyde-Park; but the horses proving as ungovernable as the Parliament, threw his Highness out of the box, and, in his fall, one of his pocket-pistols went off, notwithstanding which he escaped without either wound or broken bones (p). By the *Instrument of Government* the Parliament was to sit five months, which the Protector took the liberty of computing by his soldiers almanack, in which months consists only of twenty-eight days; and, finding they were about to take away his power, and would give him no money, he, on the 22d of January, sent for them once more into the Painted Chamber, where, in a very long, ambiguous, and bitter speech, having told them his mind, he dissolved them (q). These were the principal events of the first year of his Protectorate, for of the principal events only we can, in this place, take notice [EE]. The opening of the year 1655 proved but cloudy. The dissolution of the Parliament stirred all the ill blood in the kingdom, so that he found himself at once beset with conspiracies on all sides, and by all parties; but he had the good luck to discover them before those concerned were ready to put them in execution. His first step was to put the city in good humour, by restoring to them their militia, under the command of their old officer Major-General Skippon; then, February 13th, he went to Guild-hall, and declared the Republicans and Cavaliers had formed designs against his person (r). Of the former Major John Wildman, who had been an intimate friend of his, was seized, while penning a paper, intituled, *A Declaration of the Peo-*

[EE] *We can in this place take notice.* It must appear very strange to the reader, that Cromwell and his Council having a power to levy money by virtue of their ordinances, he should, notwithstanding, be so much distressed for it, as to be under the necessity of calling a Parliament; still stranger, that with all the powers he had given himself in the instrument of government, he should not have it in his power to pack one for his purpose; and strangest of all, that he who formerly purged the Houses so effectually by his army, when it was chiefly for other men's service, should not be able to do it as effectually for his own. We will endeavour to explain all these points. His ordinances had indeed the force of laws, and it was under colour of them that he raised those monthly assessments which enabled him to carry on his government; yet these were not sufficient for his expences, and almost all the casual revenue of the public had been granted away by the Rump, or rather shared amongst themselves (165). He was unwilling to hazard raising new taxes without the consent of Parliament, because he had promised the contrary in his instrument of government, and he had equal reason to doubt whether the people would pay, or the army levy, such taxes; to avoid which he took very extraordinary ways of coming at money, such as seizing four hundred thousand pounds belonging to the King of Spain, though as yet there was no war declared. But the want of money was not the only reason which drove him upon this measure: he wanted to have his own power and the *Instrument of Government* confirmed by Parliament, and flattered himself with many good turns from them, which could not with any decency be done by his own power (166). In his endeavours to model the Parliament before they sat, he pushed every thing to the utmost; but an act of cunning that had been very serviceable to him before, rendered all his contrivances abortive now, for in the plan of Parliament settled by the instrument, the counties, instead of having two, had most

of them five, and some more, representatives, a thing very right in itself, and therefore very wrong with respect to him, since he could introduce in that quality but very few of his creatures. Scotland and Ireland indeed, sent for the most part officers of the army; and therefore the Patriots in the Parliament treated it as a solecism, first to enslave countries, and then to enable them to send up their jailors and tyrants to sit amongst, and become a part of, the representatives of a free nation (167). What was worst of all, many of his own creatures fell off; for the free speakers in the House unmasked his policy so effectually, that they saw they were forging chains for themselves. His purges, however sharp, came a little too late, the body of this House of Commons being pretty well seasoned to them; so that many of them took the Engagement in order to get into the House, and explained it away as soon as they were got in. He was obliged to trust the management of the Parliament to Lambert, who desired to have the *Instrument of Government* confirmed, in hopes of becoming his successor; but the true secret of their hasty dissolution was a design discovered to the Protector by Col. Pride, which many of the inferior officers of the army had formed, of seizing and delivering him prisoner to the Parliament (168). In the midst of these public perplexities his domestic quiet was interrupted by the death of his mother, Nov. 18, 1654. She lived with him at Whitehall, shared in the splendor of his Court, but enjoyed it not; for though she troubled him but little with her remonstrances, yet her fears were so strong, that she could not believe he was safe if she did not see him twice a day, and if by accident she heard a pistol at any time discharged, she could not help crying out, *My son is shot* (169)! The Protector, contrary to her desire, who foresaw they would never rest there in peace, caused her remains to be interred in King Henry VIIIth's chapel in Westminster-abbey (170).

ple of England against the Tyrant Oliver Cromwell, Esq: some other violent men of that party he imprisoned, but was afraid of doing more (s). As to the Royalists, he suffered them to go on a little; for by the help of one Manning (t), who was his spy in the Court of King Charles II. he was so well acquainted with their projects, as to put themselves upon such measures as entirely defeated them; and this is a true account of that insurrection which broke out at Salisbury, where the King was proclaimed, and Cromwell's Judges seized; which act of open force left no doubt with the public, that there were some designs against the Protector, which, otherwise, they were ready enough to disbelieve (u) [FF]. For this insurrection Colonel Penruddock, Mr. Grove, and several other persons, suffered death; and from hence the Protector, who had hitherto shewn an inclination to have governed as a lawful Prince if he could, seemed to lay aside this disposition, and no longer to make any difficulty of supporting his authority in any manner, and by any means; so that from the time the first public disturbance broke out into a civil war, the people of this kingdom in general never underwent so great oppression, either in their properties or persons; were deprived to such a degree of the benefit of the laws, or had so melancholy a prospect before them, of unrelenting and irresistible dominion, supported by an armed force (w) [GG]. In the Spring of this year was carried into execution that famous expedition, by which the Protector hoped to make himself master of a great part of the Spanish West-Indies, having sent thither a powerful fleet, under the command of Admiral Penn, and the greatest body of land-forces that had been ever seen in America, commanded by General Venables; and though, in the main part of their design, these officers were utterly unsuccessful, yet they made themselves masters of the Island of Jamaica, which has remained ever since part of the dominions of the British crown (x). We have different accounts of this great transaction in our general histories, and many circumstances there are which have not been hitherto fully explained [HH]. He was very de-

firous

[FF] *They were ready enough to disbelieve.* It is very certain that Mr. Thurloe, who, from being Secretary to Oliver St. John in his embassy to the States, was raised to be Secretary and Prime-Minister to Cromwell, had a great deal of the old Walsingham spirit, and knew how to manage a great number of busy intriguing spirits so dexterously, as by the help of sham plots of his own contriving, to find out and disappoint the true. Here we must observe the wise distinction made by Cromwell for the present, between the Republicans and the Royalists, who were equally enemies to the Protector, though he did not care to show himself equally an enemy to them. He contented himself therefore for the present, with displacing Major-General Harrison, Col. Rich, Col. Okey, &c. and with the seizing Major-General Overton and some others, that expressed themselves in terms of dangerous resentment. Nay, to such a degree was he master of his passions, though naturally no man was more passionate, that when Colonel, the same who was formerly Cornet Joyce, reproached him to his face with his services, he only-bid him *Be gone* (171). But he did not think himself obliged to treat the Royalists so favourably, and therefore being quite master of their projects, he made, or rather his Secretary Thurloe made, some of his creatures give out false times for a general insurrection, by which the design was effectually defeated, and yet there were so many appeared in arms, as to shew that there really was such a design, and thereby afford a colour for putting such to death, as were unluckily involved in it; and they had the less reason to hope for mercy, since they pleaded in their own defence, that they could not be guilty of any treason, because those against whom they acted were not a legal government; and indeed the Chief Justice Rolle did not care to try them, and Mr. Ludlow very frankly owns, that their defence was well founded (172).

[GG] *Supported by an armed force.* To lay a foundation for all this violence, the Protector, with the advice of his Council, published an Ordinance, importing, that all who had borne arms for the King, or who at any time had declared themselves of his party, should be decimated, or pay a tenth part of the income of their estates for the expence of those extraordinary forces that they obliged his Highness to keep up. Commissioners were appointed in every county to receive the money arising from this new establishment, which brought in a prodigious sum of money, as the Commissioners had power to compound all demands for three years purchase (173). This ordinance was so penned, that it took in all that should

disturb his government, or rather be suspected of disturbing it, upon any principle whatever. At this time county troops were established, every private man having eight pounds a year given him, not for military service, but for informing: a Captain had a hundred pounds a year, and other officers in proportion. And finally to provide for all inconveniences, as well amongst the people as in the army, he divided England as it were into so many cantons, over each of which he placed one called by the name of Major-General, which Major-Generals were in the nature of Prefects, or Governors of provinces (174). These men were to have the inspection and government of the inferior Commissioners in every county, to commit to prison all such persons as they suspected, to levy all monies which were ordered by his Highness and his Council to be collected for the public, to sequester all who did not pay their decimation, and to put in execution such farther directions as they should receive; and there was no appeal from any of their acts but to the Protector himself (175). For the management of the affairs relating to this commission they had an office at London, where recognizances were entered, and their proceedings filed, by which the Protector hoped to obtain a distinct account of the quality of every person in the Royal interest, and of the value of his estate, throughout the kingdom; for as to these Christian Bahaws, they were empowered by their commissions to take an account of all suspected persons of the King's party, and such as were actually so to receive security of them, in which they were to be bound to act nothing against the government, and to reveal all plots that should come to their knowledge. They were to suppress all horse-races, cock-matches, and other concourses of people; to secure the high-ways; to take Engagement from Cavaliers for their servants and children; and those that did not so, nor give security, to commit to prison, and to rate and receive the money arising from this decimation (176). These Major-Generals carried things with a very high hand, decimating whom they pleased, interrupting the proceedings at law upon petitions of those who thought themselves aggrieved, and threatening such as would not readily submit to their orders, with transportation to the West Indies.

[HH] *Which have not been hitherto fully explained.* It is not to be expected that in a short note, any competent account should be given of a very long expedition, the preparatives for and proceedings in which might well employ a small volume, without inserting any thing that could be esteemed tedious by the reader: all therefore that I propose, is, to offer a few hints of circumstances worthy of being thoroughly examined.

firous of bringing most of those projects to bear, that he knew had a tendency to please the people; and therefore thought he could not make a better use of his power, than to restrain some things that were deemed exorbitant in the proceedings of the High Court of Chancery; upon which, however, Sir Thomas Widdrington, Mr. Whitlocke, and Mr. Lenthall, desired to resign their offices, who had kept them through such a variety of changes, and when most people thought the Constitution had received greater injuries than this (y). They were permitted to do this without any offence taken, as appears from the Protector's making the two former Commissioners of the Treasury, and the regard he shewed to Lenthall as long as he lived. As for the Great Seal, it went into such hands as had scarcely been intrusted with it before, viz. Major Lisle and Colonel Fiennes (z). The new King of Sweden sent over an Ambassador, to compliment the Protector, who was most graciously received, and great pains were taken to make this instance of respect from a foreign Court as public as it was possible; but the visit that Queen Christina was inclined to have paid him he judged proper to avoid, which was certainly an argument of his great prudence (a). That alliance, which had been so long in treaty with the Crown of France, was signed November 24, 1655, and proclaimed the 28th of the same month; by which it was stipulated, that Cromwell should send over a body of English troops, to act in conjunction with the French against the Spaniards in the Low-Countries, and that, on the other hand, the French King should oblige the Royal Family to quit his dominions (b). This treaty has been much magnified by some, but certainly without any great cause, since it was entirely destructive of the balance of power, and became, in its consequences, the real cause of most of those wars that have cost us so much blood and treasure [II]. The glorious successes of the great Admiral Blake in the Mediterranean, and the great sums that he recovered from several powers, for depredations committed by their subjects on the English trade, did much honour to the Protector's government; and, to conclude the transactions of this year, it must be allowed, that, how much soever he might be disliked at home, his reputation, at this time, was very great abroad (c) [KK]. The loss he sustained in the discovery of Manning, whom King Charles caused to be shot for corresponding with Thurloe, was most effectually repaired by the assistance he received from a person of superior character, who was Chancellor Hyde's great correspondent, and supposed to be one of the most active and determined Royalists in England. The war with Spain, which had hitherto produced only vast ex-

examined. The motives to this expedition were none of the most honourable, since they were plainly avarice and fear. The Protector had just tasted the Spanish treasures, and he had a mind to take a full meal; for whoever consults his instructions will find, that it was not the particular Island of Hispaniola, but the Continent also that he had hopes of conquering; and yet the embarkation of the troops was from time to time deferred, so that the end of the expedition was no secret, even before the ships sailed from England (177). In the next place it was fear, for Venables, who commanded the land forces, had never been well affected to Cromwell, and before this time was reconciled to the King, of which it is not impossible the Protector might be informed. The troops too were composed of men discharged out of all the regiments in his service for disaffection, and if at last they had not been hurried on board at Portsmouth, when they least expected it, Venables had marched up to London, in order to try if it had not been possible to dethrone the Protector (178). There was a great deal of mismanagement on all sides in the setting out; a very high misunderstanding between the Commanders in Chief from the very beginning; the additional forces they took on board at Barbadoes were the most profligate and worthless people in the world; so that, upon the whole, it is much more wonderful that ever these people became masters of Jamaica, than that they were disappointed at Hispaniola, for which, however, Cromwell had no body to thank but himself; for there were such a narrowness and selfishness in his instructions as dispirited the soldiers, who found, that after all the hazards they had run, and dangers they had endured, they were to fight, not for themselves, but to fill the Protector's privy purse (179).

(177) Burchett's Naval History, p. 385.

(178) Life of Dr. Barwick, p. 185, 186.

(179) Burchett's Naval History, p. 385.

[II] *That have cost us so much blood and treasure.* The conjuncture of those times, and the high struggle between the Crowns of France and Spain, were very favourable for the Protector, who might, if he had pleased, have taken the balance of power in Europe entirely into his own hands, and not only have held it during life, but have fixed it for the rest of that century at least. But after much deliberation he resolved, or rather his affairs compelled him, to break with Spain,

in hopes of filling his Exchequer by that war; and this made him join with France, as well as for two other reasons; the first, that he might procure the Royal Family to be driven out of that country by treaty, as they had been before out of Holland; the second, that he might have a port upon that Continent; the expediency of which was first suggested to him by the Spaniards, who, if he would have joined with them, promised to put him in possession of Calais (180). It is asserted by Dr. Welwood, on the credit of Puffendorff, that in the negotiation of these treaties he carried himself very haughtily; that in the instrument he caused his own name to be put before the French King's; that he would not allow him to stile himself King of France, but of the French, though at the same time he stiled himself Protector of France as well as England. It would be very difficult to make any of these points good; for in Milton's Letters it will be found, that Cromwell, writing to Lewis XIV. gave him the title of King of France (181), not in the superscription only, but in the body of his letter; nor does it any where appear that Cromwell ever took the title of Protector of France at all, but of the republick or commonwealth of England, Scotland, and Ireland; and therefore this is as much to be relied on as another fact laid down as notoriously true, that Cromwell was born on the third of September, though it is notoriously otherwise (182).

(180) See Thurloe's account of the negotiations of Cromwell with France and Spain, delivered to the Earl of Clarendon, at the end of the first vol. of his State Papers.

(182) Welwood's Memoirs, p. 113.

[KK] *Was very great abroad.* It would be a very easy thing to prove this, from what is said of him by a multitude of foreign authors; but it may be sufficient to observe, that at this time there was a print of the Protector on horseback publicly sold at Paris, with these Latin verses under it (183).

(183) From the MS. of the late Rev. Mr. Knight, Fellow of Christ-Church Oxford.

Cernimus hic omni caput admirabile mundo
Quod Reges, Populi, Barbariesque stupent.
Regibus hic frater; populis pater, hostis multum,
Barbariem vera religione domat.
Nullius ille timet quam summi numinis arma;
Non timet, et pacem cuilibet esse parat.
Quis dubitat sacro hoc si pergat Flamine Victor,
Quin subita Meretrix de Babylone cadet?

pectations,

pectations, began now to bear some fruit; for the gallant and fortunate Blake, falling in with the Plate Fleet, almost at the mouth of the harbour of Cadiz, attacked and destroyed it to the irreparable damage of the Spaniards, and the no small gain of the Protector, who received two millions in ready money out of the prizes that were taken (d). The Protector, in the midst of all that he possessed, still felt some wants, which he judged nothing could supply but a Parliament; and, having concerted more effectual methods, as he conceived, for bending them to his will, than had been practised before the last, he directed writs to issue for the meeting of that assembly September 17th, 1656, at which time they met accordingly, but with a guard posted at the door of the House, who suffered none to enter till they had swallowed the oaths that were ready prepared for them, by which about two hundred were excluded, who signed a protest against this proceeding, and against all that should be done by those who sat without them (e). The Parliament, however, chose Sir Thomas Widdrington their Speaker, passed an act for disannulling the King's title, another for the security of his Highness's person, and several money-bills; for all which the Protector gave them his most gracious thanks (f). It was apprehended, that some difference might have arisen upon a motion in the House, against the exorbitant power of the Majors-General; but, as they began to be formidable now to the Protector himself, they were fairly given up by Mr. Claypole, who had married the Protector's daughter, in a speech, which set all things right again (g). About the close of the year a new plot was either discovered, or made, for which one Miles Sindercombe was condemned, and that by the ordinary forms of justice; but he disappointed the Protector, and was found dead on the morning intended for his execution, which gave birth to many conjectures (h) [LL]. However, a public thanksgiving was appointed for the happy deliverance of his Highness's person, and the Speaker and Parliament were splendidly regaled at Whitehall (i). In the Spring of the year 1657 it plainly appeared what the Protector drove at, by all the pains he had taken with his Parliament, in which a kind of legislative settlement of the Government was brought upon the carpet, under the title of *The Humble Petition and Advice*, in which there was a blank for the supreme Governor's title, and a clause prepared to countenance the establishing something like Peers, under the name of the Other House (k). At length the whole came to light: for one Alderman Pack, a forward, time-serving, money-getting fellow, and deep in all the jobs of the Government, moved, that the first blank might be filled up with the word King, which was violently opposed by the Army Members; but at length, after various debates, it was carried, as well as the clause impowering him to make something like Lords; and in this form the petition was presented to his Highness, who desired some time to con-

[LL] Which gave birth to many conjectures.] The case of this Miles Sindercombe was very extraordinary. He was drawn in to conspire against the Protector by Col. Edward Sexby, formerly a famous Agitator, and one in great confidence with Cromwell, afterwards his most violent and bitter enemy. That Col. again was an Agent of the Spaniards, and so well supplied by them, that, as he confessed, he furnished Sindercombe at several times with five hundred pounds (184). But as in conspiracies of this sort a man cannot act without assistance, Sindercombe found out one Toope (185), who was of the Protector's guard, and withal one of Mr. Thurloe's spies, to whom he communicated his design, and three different methods were contrived and attempted: one was, to shoot Cromwell in his passage through Hammer-smith in his way to Hampton Court; another, to fire Whitehall; and a third, to shoot him as he was going to Westminster-abbey. These attempts having miscarried, he was seized, and brought to his trial in the Upper Bench, before the Lord Chief Justice Glynn, Feb. 19, 1656 (186): but whereas some writers say, that he was tried upon a law made by Cromwell's Parliament, that is a mistake; for he was tried upon the common statute of treason, the Chief Justice taking upon him to inform the Jury, that by the word King the Supreme Magistrate was intended, whether he had that title or not (187). The Jury, upon very full evidence, found him guilty; and Friday the fourteenth of the same month was appointed for his execution. He went to bed well; but when they came to call him up he was dead, and as appeared by a paper he left under his close-stool, he destroyed himself by poison (188). It was given out however at that time, and believed by many, that Cromwell caused him to be poisoned, being afraid of bringing him to a public execution (189). The reader will understand this better from what the Noble Historian (190) says upon this subject: 'Sindercombe was a very stout man, and one who had been much in Cromwell's favour, and who had twice or thrice, by

wonderful and unexpected accidents, been disappointed in the minute he had made sure to kill him. And when Cromwell had caused him to be apprehended, his behaviour was so resolute in his examination and trial, as if he thought he should still be able to do it; and it was manifest that he had more associates who were undiscovered, and as resolute as himself; and though he had got him condemned to die, the fellow's carriage and words were such, as if he knew well how to avoid the judgment, which made Cromwell believe that a party in the army would attempt his rescue. Whereupon he gave strict charge that he should be carefully looked to in the Tower, and three or four of the Guard always with him day and night. At the day appointed for his execution, those troops Cromwell was most confident of were placed upon Tower-hill, where the gallows was erected. But when the guard called Sindercombe to rise in the morning, they found him dead in his bed, which gave trouble exceedingly to Cromwell, for besides that he hoped that at his death, to avoid the utmost rigour of it, he would have confessed many of his confederates; he now found himself under the reproach of having caused him to be poisoned, as not daring to bring him to public justice, nor could he suppress that scandal. It appeared upon examination, that the night before, when he was going to bed, in the presence of his guard, his sister came to take her leave of him, and upon her going away he put off his cloaths, and leaped into his bed, and said, *This was the last bed he should ever go into.* His body was drawn by a horse to the gallows where he should have been hanged, and buried under it with a stake driven through him, as is usual in the case of self-murder. Yet this accident perplexed Cromwell very much, and though he was without the particular discovery he expected, he made a general discovery by it, that he himself was more odious in his army than he believed he had been.'

sider before he gave his answer. The Parliament appointed a Committee, with their Speaker at the head of it, to confer with and satisfy the Protector; and, in this conference, they, with great learning and eloquence, proved, that, notwithstanding all the faults they had formerly found with the office of a King, yet, after all, they were now perfectly satisfied, the four letters, of which that word was composed, were as harmless and inoffensive as any in the whole alphabet (*l*). The Protector, who was not of a narrow way of thinking, but had as comprehensive sentiments as they upon this point, would have been content to have had the Kingship forced upon him, but that he found, that some of his best friends and nearest relations, such as his son-in-law Fleetwood, his brother-in-law Desborough, and many others, were utterly against it, and carried their opposition so far, as to promote a petition from the Army to the Parliament against this measure (*m*); which though, to countenance parliamentary authority, laid aside, yet chiefly determined Cromwell to refuse that honour which he had been so long seeking; and accordingly, May 8th, 1657, he told them, in the Banqueting-house, that he could not, with a good conscience, accept the government, under the title of King (*n*). The Parliament then thought proper to fill up the blank with his former title of Protector; and his Highness himself, that all the pains he had taken might not be absolutely thrown away, resolved upon a new inauguration; which was accordingly, with great solemnity, performed on the 26th of June, 1657, in Westminster-Hall, with all the pomp and splendor of a Coronation (*o*). After this the House of Commons adjourned to the 20th of January following, in order to give the Protector time to regulate all things according to the new system; with a view to which he summoned his two sons, and many other persons, to take their seats in the other House (*p*). About this time it was, that Major-General Lambert lost his favour; which, however, does not seem to have been an act so much of the Protector's will, as a scheme of his own; for he utterly disliked the design that Oliver had formed of making himself King; and told him plainly, that, if he persisted in it, he could give him no assurance of the fidelity of the army. The necessary and immediate cause of his disgrace was, refusing to take the oath appointed by *The Humble Petition and Advice*; upon which the Protector removed him from all his commands, but, at the same time, granted him a pension of two thousand pounds a year, to keep him quiet (*q*). The sense of this, and some other untoward accidents, was, in some measure, qualified by the news of Admiral Blake's great successes at the Canaries, and in the Mediterranean, by which Spain felt very severely the weight of the English arms, and the Protector's coffers drew considerable supplies, but the honour and interest of the nation suffered extremely (*r*) [*MM*]. That gallant seaman, no way answerable for the cause or conduct

[*MM*] But the honour and interest of the nation suffered extremely.] We will take occasion in this note to set the business of the Spanish war in its true light. The Crown of Spain was very much distressed in almost every part of her dominions, and this induced her Monarch to be very ready in owning the Parliament, and very desirous, if it had been possible, to procure the good will of Cromwell, whom, as is before observed, he courted to a degree that was indecent and ridiculous (191). The true motive to this war, on the part of Cromwell, was necessity. He wanted money exceedingly; some of his troops and many of his officers he could not depend on; therefore a war was requisite, and that too such a war as he might get by (192). He endeavoured to colour this, by engaging the Merchants to complain against Spain, in which he was unsuccessful; for which he revenged himself, by suffering their effects to be seized in that kingdom (193). He next seized a large sum of money belonging to that Crown, which they offered to lend him for a certain number of years without interest, and to have taken his word for the repayment; so desirous they were of maintaining peace if it were possible (194). His West India expedition was in itself a bad design, because no war declared, ill concerted, worse executed, and yet in some measure luckily concluded. Capt. Stayner's taking two galleons at Cadiz, with two millions of silver on board, and destroying twice as much more, was a dreadful blow to the Spaniards; and yet this loss was inconsiderable in respect to the burning the Plate Fleet at Santa Cruz, by which however Cromwell got nothing (195). When Captain Richard Stayner came home with his prizes, all imaginable pains were taken to magnify the exploit in the eyes of the people: the money was carried with great parade through London, the Captain knighted and handsomely rewarded; there was a solemn thanksgiving also for this mighty success, which Mr. Waller celebrated in a poem that will render it immortal, though the design with which it was written failed; for it plainly appears that the

Poet meant to have recommended his hero to the regal dignity, as the only adequate return the nation could make for the benefit they had received (196). But in those times men were more quick-sighted; and all this pomp and art could not hinder the expressions of high discontent, arising from the general knowledge that this affected triumph was a downright imposition calculated to amuse and deceive the populace, without making the least impression upon men of sense and property. The Merchants exclaimed bitterly, and with very good reason, as fully appeared from a report made to Richard's Parliament, that fifteen hundred English ships were taken in the course of this war (197). Besides, this threw the Spanish trade first into the hands of the Dutch, to whom they were naturally averse, and could hardly have been reconciled any other way (198). We may add to this, the irreparable loss to all Europe of ten times as much silver as Cromwell gained, and of which this nation, in a fair course of trade, would have obtained much more than ever the war brought into the Protector's coffers (199). Yet must we not imagine that even he was at all the better for it upon a balance: on the contrary, the expence of the American expedition exceeded all that he acquired. This does not at all lessen the reputation of Blake and the rest of the Commanders. They obeyed orders, did what they took to be their duty, and carried the glory of the English Flag to an amazing height. Some have very improperly interested religion in this quarrel, and because Cromwell made war upon a Catholic power, and threatened the Pope with burning Civita Vecchia, which no doubt might have been easily done, would thence magnify his zeal to the Protestant faith (200). At the bottom, however, this will be found but a very untoward compliment to the Protestant cause, which most certainly never inclines those who espouse it to unjust proceedings; and to the avowed breach of the law of nature and nations; and therefore to wipe off this aspersion it was necessary to shew, that this war really took

conduct of that war; but justly famous for his generous courage; and constant zeal for his country's service, dying in his return home, within sight of his native shore, in the arms of victory, his corps, by the Protector's orders, was, with great solemnity, transported to Westminster-Abbey, and there interred with all the honours due to so great an officer, and to so good a man (s). The forces which had been sent over to Flanders, for the assistance of the French against the Spaniards, gained very great reputation, and made the French Court more and more attentive to the preservation of Cromwell's friendship; but, at the same time, it induced his Catholic Majesty to afford some countenance and assistance to King Charles, then in the Low-Countries, and meditating an attempt upon England. To facilitate this great design, the Marquis of Ormond was sent over, and remained some time in London, where he very narrowly escaped falling into the hands of the Protector, who received from his spies an exact information of all the measures taken by the Royalists, which, therefore, he easily disappointed. Only Captain Titus contrived to wound him deeply, not in his body indeed, but in his mind, by publishing a small treatise, under the name of William Allen, intitled, *Killing no Murder*; in which he argued so strongly, that one, who had violated all laws could derive protection from no law, that Oliver thenceforward believed himself in continual danger (t). In the beginning of the year 1658, he pleased himself with the hopes of being once at the head of an assembly, somewhat resembling the antient Parliaments of England; and accordingly, pursuant to their own adjournment, the Commons met on the 20th of January, as the other House also did, agreeably to the writs of summons issued by the Lord Protector. He sent for them by the Black Rod, and began his speech with the pompous words, *My Lords, and you the Knights, Citizens, and Burgeesses of the House of Commons*; and, after he had done speaking, suffered them to retire to their respective Houses, where, to give the greater credit to his government, all shew of force or restraint was now withdrawn. This served only to discover, that therein lay his whole support; for the antient nobility would not resume their seats in such company as he had assigned them, several Members of the House of Commons chose to keep their writs requiring their attendance in the other House, and sit where they were; and not a few, who had been before excluded, took advantage of the doors being open, and boldly came to the House (u). In less than a fortnight the new system was in a fair way of being pulled to pieces. The House of Commons would have nothing to do with the new nobles in the other House; and they, on the other hand, were at a loss to know what to do by themselves; of all which the Protector being informed, he came on the 4th of February, and dissolved them with great bitterness of speech, and deep sorrow of heart; for now he saw plainly, that a regular establishment was a thing impracticable (w). Some farther designs were soon after discovered, not of the Cavaliers only, but of the Fifth Monarchy-men also; which discoveries were chiefly owing to the dexterity of Secretary Thurloe, whose implements, in the shape of Cavaliers and Fanaticks, mixed in all companies, and thrust themselves into all secrets, that they might acquire a subsistence by betraying them (x). With the latter, the Protector was obliged to observe some measures, and, though he took care to secure himself, yet he durst not act with severity towards them; which, perhaps, heightened his resentment against the former, whom, contrary to Whitlocke's advice, he delivered over to a High Court of Justice (y). By the sentence of that Court Dr. Hewett, a Reverend Divine of the Church of England, who had married one of Cromwell's daughters to the Lord Fauconbridge, suffered death for contumacy, having refused to plead, or to acknowledge the jurisdiction of the Court, June 8th, 1658; as did also Sir Henry Slingsby by the like sentence. Several others were condemned by the ordinary forms of law, which, at length, the Protector was persuaded to use, which struck the nation with as much horror as fear (z). The gloominess of this scene was a little dispersed by the success of the English arms abroad, and the delivery of Dunkirk, taken chiefly by their valour, into the hands of Lockhart, his Ambassador; concerning which we have a very remarkable story, if it be well founded [NN]. The great satisfaction the Protector expressed at this, and at the French

its rise from Cromwell's mistaking his own interest, and preferring that mistaken interest to the welfare of the nation, which manifestly appeared, not only from his attacking the Spaniards without cause and without warning, but, that he might do this, barbarously sacrificing the British Merchants, whose effects were justly seized by way of reprisal for his injustice (201).

[NN] Concerning which we have a very remarkable story, if it be well founded.] This is to be met with in Welwood's Memoirs, and very well deserves the place it holds there, if it could be supported by any clear authority. His relations runs thus (202): 'There was an article in the Treaty between France and the Protector, that if Dunkirk came to be taken, it should be immediately delivered up to the En-

glish, and his Ambassador Lockhart had orders to take possession of it accordingly. When the French army, being joined with the English auxiliaries, was in its march to invest the town, Cromwell sent one morning for the French Ambassador to White-hall, and upbraided him publicly for his master's designed breach of promise, in giving secret orders to the French General to keep possession of Dunkirk in case it was taken, contrary to the Treaty between them. The Ambassador protested he knew nothing of the matter, as indeed he did not, and begged leave to assure him there was no such thing thought of; upon which Cromwell, pulling a paper out of his pocket, *Here, says he, is the copy of the Cardinal's order; and I desire you to dispatch*

French King's sending over the Duke de Crequi to compliment him upon the occasion, in return to a civility of the same kind paid by the Protector, in sending over his son-in-law Lord Fauconbridge (a), lasted not long; for his favourite daughter, Mrs. Claypole, falling sick of a distemper, which, by the excruciating pains it brought upon her body, not a little distempered her mind, so wounded him by her vehement exclamations against his cruelties, and more especially for the death of Dr. Hewett, on whose behalf she had made the most importunate intercessions, that he was no less affected thereby than from her death, which happened on the 6th of August following (b). He was, from that time, wholly altered; grew daily more reserved and suspicious, not indeed without great reason; for he found a general discontent prevailed through the nation, a signal disaffection in the Army, and a great increase of the influence of the Republicans, to whom his son-in-law Fleetwood, and even his wife, were very much inclined; and besides them, his Privy-Counsellors Pickering and Sydenham, upon whom he had principally depended, and even Desborough, his near relation and great confident, caballed with Lambert, so that he knew not which way to turn, or what to expect (c). These cares having long tormented his thoughts, at last affected his body, so that, while at Hampton-Court, he fell into a kind of slow fever, which soon degenerated into a tertian ague. For about a week his disease continued without any dangerous symptoms, insomuch that every other day he walked abroad; but one day, after dinner, his five Physicians coming to wait upon him, one of them having felt his pulse, said, that it intermitted, at which, being somewhat surprized, he turned pale, fell into a cold sweat, and, when he was almost fainting, ordered himself to be carried to bed, where, by the assistance of cordials, being brought a little to himself, he made his will with respect to his private affairs (d). As to the remaining part of the history of his distemper, which, on many accounts, is very remarkable, the reader will find

* *dispatch immediately an express, to let him know, that I am not to be imposed upon, and that, if he deliver not up the keys of Dunkirk to Lockhart within an hour after it shall be taken, tell him, I'll come in person, and demand them at the gates of Paris.* There were but four persons said to be privy to this order, the Queen-mother, the Cardinal, the Marshal de Turenne, and a Secretary, whose name it is not fit at this time to mention. The Cardinal for a long time blamed the Queen, as if she might possibly have blabbed it out to some of her women; whereas it was found, after the Secretary's death, that he had kept a secret correspondence with Cromwell for several years, and therefore it was not doubted but he had sent him the copy of the order beforementioned. The message had its effect, for Dunkirk was put into the possession of the English. And to palliate the matter, the Duke and Marshal Crequi was dispatched into England Ambassador Extraordinary to compliment Cromwell, attended by a numerous and splendid train of persons of quality, among whom was a Prince of the blood, and Mancini, Mazarine's nephew, who brought a letter from his uncle to the Protector, full of the highest expressions of respect, and assuring his Highness, that being within view of the English shore, nothing but the King's indisposition, (who lay then ill of the small-pox at Calais) could have hindered him to come over to England, that he might enjoy the honour of waiting upon one of the greatest men that ever was, and whom, next to his master, his greatest ambition was to serve. But being deprived of so great a happiness, he had sent the person that was nearest to him in blood, to assure him of the profound veneration he had for his person, and how much he was resolved, to the utmost of his power, to cultivate a particular amity and friendship betwixt his master and him. This narrative has a very fair appearance, and has so long passed for an indisputable truth that I should not easily have inclined to question it: but thus much is certain, that, if there be any truth in it, it would be a very difficult matter to find it out, because almost every circumstance of it may be shewn to be false. It appears from Lockhart's letters, who was not only the Protector's Ambassador in France, but also Commander in Chief of his forces, that the difficulty at the opening of the campaign lay in bringing the Cardinal to resolve upon besieging Dunkirk early, because the Spaniards were possessed of Hesdin, and were thereby in a condition to have made a diversion by an excursion into France; and the people glomoured that the Cardinal was leaving them at the

mercy of the Spaniards, while the army of France was to be employed in taking of towns, which were to be given up to the English, their antient and inveterate enemy (203). It appears farther, that it was impossible for the French to have broken their treaty with Cromwell in this respect, for three reasons: the first, because without the assistance of an additional assistance from him, they were not able to invest the place; secondly, because he had a pawn in his hand, which was Mardyke, and which was to be given up to France, upon putting Dunkirk into his hands; thirdly, because after taking the place, the preservation of their own conquests, and even of their army, depended absolutely upon the continuance of his friendship; so that if they had deceived him, not only the forces of France, and the fortune of the war would have been in the utmost danger, but the persons also of the King and Cardinal, who were at that time in the army (204). We may add to all this, that there is not the least notice of such a transaction in Whitlocke, or in any of the Historians of those times, and, which is the more remarkable, Whitlocke informs us, that Cromwell might have had the place betrayed to him by the Spanish Governor, which he refused (205) as less honourable than receiving it from France, a thing altogether incredible if he had entertained the least suspicion of their sincerity. Add to all this, that from several of Lockhart's letters it appears, he never had the least jealousy of the Cardinal in that point (206), and that if there had been any such transaction as this between the Protector and the French Ambassador, it could not have escaped the Minister's notice. In reference to Marshal Crequi and Mr. Mancini, they came over in consequence of Cromwell's sending his son-in-law Fauconbridge to compliment the King and Cardinal, who carried letters from the Protector to both, and was received with unprecedented marks of respect. Besides, the French Marshal and the Cardinal's nephew had their audience of Cromwell before Dunkirk was taken, which within one hour after its being taken was put into the English hands. The truth of the matter was, what does infinitely more honour to Cromwell than this story, that the French durst not deceive him, nay, durst not take any step that could give him the least jealousy or suspicion; for it was his fleet and army that enabled them to do all they did, and there is nothing more certain, than that he was the true author of all their future greatness, as well as of that lamentable depression of the Spanish monarchy, which it could never recover, and which has been so fatal to the balance of power in Europe.

it in the notes [OO]. Being removed to London he became much worse, grew first lethargick, then delirious; whence recovering a little, but not enough to give any distinct directions as to the management of public affairs; he died on Friday, September the 3d, 1658, aged somewhat more than fifty-nine years and four months. Some have intimated a suspicion, that he died of poison (e); but the nature and length of his disease, together with his body's being publicly opened, seems to destroy all probability in such a suppo-

[OO] *The reader will find it in the notes.* It is impossible to have a better account of his last sickness, than that given by Dr. Bates, who was his Physician. After mentioning the circumstance of making his private Will, as related in the text, he proceeds thus: 'Next morning early, when one of his Physicians came to visit him, he asked him (207), Why he looked so sad?' and when he made answer, 'That so it became any one, who had the weighty care of his life and health upon him;' 'Ye Physicians, said he, think I shall die.' Then the company being removed, holding his wife by the hand, he spoke to him to this purpose: 'I tell you I shall not die this bout, I am sure on it.' And because he observed him to look more attentively upon him at these words, 'Don't think, said he, that I am mad; I speak the words of truth, upon surer grounds than Galen or your Hippocrates furnish you with. God Almighty himself hath given that answer, not to my prayers alone, but also to the prayers of those who entertain a stricter commerce and greater interest with him. Go on cheerfully, banishing all sadness from your looks, and deal with me as you would do with a serving-man. Ye may have a skill in the nature of things, yet nature can do more than all Physicians put together, and God is far more above nature.' But being ordered to take his rest, because he had not slept the greatest part of the night; as the Physician was coming out of the chamber, he accidentally met another, who had been a long time very familiar with him, to whom 'I am afraid, says he, our Patient will be light-headed.' 'Then, said he, you are certainly a stranger in this house. Don't you know what was done last night? the Chaplains, and all who are dear to God, being dispersed into several parts of the Palace, have prayed to God for his health, and all have brought this answer, *He shall recover.*' Nay, to this degree of madness they came, that a public fast being for his sake kept at Hampton-Court, they did not so much pray to God for his health, as thank him for the undoubted pledges of his recovery, and repeated the same at Whitehall. These oracles of the faints were the cause that the Physicians spake not a word of his danger. In the mean time Cromwell leaving Hampton-Court, where hitherto he had lain sick, is brought to London, and the Physicians meet at a consultation in the Chamber of the afore-mentioned Doctor, who at that time was troubled with a grievous head-ach, and an imposthume in his ear. But next morning early, another Physician coming, who had watched all night with the patient, and telling the rest how ill he had been in the last fit, they all concluded that he could hardly out-live another. This sentence of the Physicians awaking the Privy-Council, at an appointed time, they come to advise him that he would name his successor. But when in a drowsy fit he answered out of purpose, they again asked him if he did not name Richard his eldest son for his successor, to which he answered, Yes. Then being asked where his Will was which heretofore he had made concerning the heirs of the kingdom, he sent to look for it in his closet and other places, but in vain, for he had either burnt it himself, or somebody else had stole it.' All this agrees very well with those authentic accounts written by Lord Fauconbridge and Secretary Thurloe to Henry Cromwell in Ireland. In the letters of the last it is said, that the Protector named his successor in writing during the sitting of the last Parliament; that he folded up the paper containing this nomination in the form of a letter directed to Thurloe; that when he was so ill at Hampton-Court he said this letter lay upon the table in his study, and directed it should be brought, but search being made for it no such paper could be found (208). It is farther said, that he declared his son Richard his successor, in the presence of several

of his Council; but this was generally doubted at the time, and is not affirmed in the Proclamation upon Richard's assuming the title of Protector (209). Before I close this note it may not be amiss to discuss two points, that seem to have been but indifferently treated. The first is with respect to his pretending to have received a revelation that he should not die at that time, not only at the beginning of his sickness, but after he was brought to London, and given over by those of the Faculty that were about him. The fact itself is very certain: General Fleetwood mentions it in a letter to Henry Cromwell, but recommends secrecy to him till the event should direct him whether to bury it in silence or proclaim it to the world (210). One would think it hardly possible to assign a reason for this, excluding fanaticism or enthusiasm; and yet a foreign writer pretends to relate, upon good authority, somewhat on this head that deserves notice. He observes, that the Physician who attended the Protector could not help expressing great astonishment at his boldness in this respect, to whom Cromwell, when they were alone, expressed himself to this effect: 'You are an honest man, Doctor, and have good sense; I wonder that you do not see that I hazard nothing by my prediction; for if, as you say, I should not survive twenty-four hours, this rumour of my recovery which will be diffused through the whole nation, will keep the minds of men in suspense, and prevent my enemies from coming to any certain resolutions: on the other hand, if I should recover, as you Physicians are not infallible, it will add new credit to my Government, and the bulk of this people will believe me a man sent from God (211). It may be objected, that it is very improbable Cromwell should deal so very freely with any man, and indeed I lay no great stress upon this story; but this may be observed by the way, that the only vanity he had was boasting of his power to overreach, of which there is a remarkable instance in what he said to Mr. Waller (212), and still a stronger instance in a matter of greater notoriety; for to his first Parliament he magnified the *Instrument of Government* as the most compleat thing that could be, whereas, in his speech to his last Parliament, he ran it down as a weak and inconsistent project, which he compared to a rotten plank (213). Besides, had he lived, the Doctor durst not have disclosed it in prejudice to his scheme of passing for a Prophet; and his divulging it after his death served only to shew, that the Protector was in reality a consummate Politician to the very last. The second point to be explained is as to his being poisoned, of which Mr. Wood tells us (214) there was a report that it was done by Dr. Bates; but he insinuates that this was invented by the Doctor's friends, to apologize for his conduct in those times, and that it might be no bar to his preferment; for he was Physician to King Charles I. to the Protector Oliver, and to King Charles II. Archdeacon Echard (215) sets it down as a fact that he gave Cromwell a sure dose; but, in this respect, neither of these writers deserve much credit, since it appears from Whitlocke (216), that there was a rumour of his being poisoned at the very time of his death, consequently it was not a tale invented after the Restoration; and that it was not a fact, appears from the sense his family had of it, visible in the Letters of Fleetwood, Fauconbridge, and Thurloe, and from the history of his distemper in those letters, which appears to have been at first a slow fever, then a tertian, and at last a double tertian, which might well carry off a person of his years, without the assistance of a sure dose, and indeed in spite of the assistance of the Faculty: neither can it be believed, that such a thing was practised upon such a person by one, when, at the same time, he was attended by four other Physicians.

fition. It appears to be more generally agreed, that there was something very mysterious in the manner of disposing of his body, which several authors, and those too of opposite principles, very positively assert, was never carried to Westminster-Abbey. It would undoubtedly be a very difficult thing to affirm which of the stories that are told about it is most probable; though there can be nothing clearer, than that none of them ought to be accounted certain (f) [PP]. A very pompous funeral was ordered at the public expence, and performed from Somerset-House, with a splendor not only equal but superior to any that has been bestowed upon crowned heads; though it is said, that expence fell heavy upon his family, and upon some of the tradesmen who furnished the ornaments of the solemnity, of which as there are many particular accounts common to be met with, there is no need that we should insist longer upon it here (g).

(k) See all these panegyrics collected and translated by the Rev. Mr. Francis Peck, in his *Memoirs of the life and actions of O. Cromwell*, Lond. 1740, 4to. (l) Wood's *Atben. Oxon.* vol. ii. col. 485.

(n) Ludlow's *Memoirs*, vol. ii. p. 480.

There were other, and those still more extraordinary, marks of public approbation bestowed upon his memory, such as the celebrated poems of Waller, Sprat, and Dryden, which are likely to last as long as our language (h); and which, though the authors lived all of them to change their sentiments, will not fail of giving posterity a very high idea of those great actions, which were capable of exciting such elevated descriptions by those who were eye-witnesses of them. Besides these, there are multitudes of Latin verses, some of them very fine, which speak the same language with the same warmth (i). In his life-time his actions had been celebrated by two very learned foreigners, as well as by his own Secretary Milton (k), with which, very probably, he was not displeased. Yet, after all, Poets are not the most credible witnesses; and we are, for very good reasons, apt to suspect whether truth be the ground-work of panegyrics. It was for this reason that Cromwell was mightily desirous of engaging a very learned man to write his history, in which nevertheless he failed; for though considerable rewards were offered, that very able person declined the task (l). We have indeed various characters from various persons, and those too of various sentiments; yet in most of these there seems to be a mixture either of flattery or of prejudice. Such as approved his actions, knew not where to stop their praises; and such as detested his proceedings, gave a loose to their resentments, that, in some respects perhaps, carried them beyond the bounds of truth. Those who hated his person went farther still. Lord Hollis will hardly allow him either great or good qualities (m); and as for Lieutenant-General Ludlow (n), one principal design of his book is to represent Cromwell as the vilest and wickedest of men. Against this last writer he has been very well defended by one, who, with great force of argument, and in very elegant language, has

[PP] *Than that none of them ought to be accounted certain.* In the first place it is proper to produce an authentic proof of the only fact that is asserted in the text, that his body was really buried before his pompous funeral. Dr. Bates gives us this account in the following words (217): 'His body being opened; in the animal parts, the vessels of the brain seemed to be over-charged; in the vitals, the lungs a little inflamed; but, in the natural, the source of the distemper appeared, the spleen, though found to the eye, being within filled with matter like to the lees of oil. Nor was that incongruous to the disease that for a long time he had been subject unto, since, for at least thirty years, he had at times heavily complained of hypochondriacal indispositions. Though his bowels were taken out, and his body filled with spices, wrapped in a four-fold sear-cloth, but put first into a coffin of lead and then into a wooden one, yet it purged and wrought through all, so that there was a necessity of interring it before the solemnity of his funeral.' Echard asserts precisely the same thing, and, in all probability, from the same authority. We have another story, said to be founded on the testimony of Mr. Barkstead, son to the famous Barkstead, who was Lieutenant of the Tower in Cromwell's lifetime, to this effect (218): 'That Barkstead, the father, among other confidants of Cromwell's, desiring in his illness to know where he would be buried, the Protector answered, where he had obtained the greatest victory and glory, and as nigh the spot as could be guessed where the heat of the action was, viz. in the field at Naseby in Northamptonshire: which accordingly was thus performed. At midnight, soon after his death, the body, being first embalmed and wrapped in a leaden coffin, was in a hearse conveyed to the said field, Mr. Barkstead himself attending, by order of his father, close to the hearse. Being come to the field, they found about the midst of it a grave dug about nine feet deep, with the green sod carefully laid on one side, and the mould on the other, in which the coffin being put, the grave was instantly filled up, and the green sod laid exactly flat upon it, care being taken

that the surplus should be clear removed. Soon after, the like care was taken that the field should be entirely ploughed up, and it was sown three or four years successively with corn.' We have a very different account from Mr. Oldmixon, who assures us that he had it from a gentlewoman who attended the Protector in his last sickness (219): 'She told me, says he, that the day after Cromwell's death, it was consulted how to dispose of his corpse; they could not pretend to keep it for the pomp of a public burial. Amongst other proposals this was one, that, considering the malice, rage, and cruelty of the Cavaliers, it was most certain, they, who never spared either living or dead, in the lust of their revenge, would insult the body of this their most dreadful enemy, if ever it was in their power; and, to prevent its falling into such barbarous hands, it was resolved to wrap it up in lead, to put it aboard a barge, and to sink it in the deepest part of the Thames, which was done the night following, two of his near relations, with some trusty soldiers, undertaking to do it.' That the Protector's body was buried before the public and pompous ceremony of the funeral seems to be out of all doubt; but that there was a body interred at Westminster, and that this body was really the Protector's body, seems to be very clear, from the following account of what passed upon the order to dis-inter him after the Restoration (220). 'In the middle isle of Henry VIIIth's chapel, says my authority, at the east end, in a vault, was found his corps. In the inside of whose coffin, and upon the breast of the corps, was laid a copper-plate finely gilt, inclosed in a thin case of lead; on the one side whereof were engraved the arms of England, impaled with the arms of Oliver; and, on the reverse, this following legenda: *Oliverius Protector Reipublicæ Angliæ, Scotiæ, & Hiberniæ, natus 25 April, 1599, inauguratus 16 Decembris 1653, Mortuus 3 Septembris ann. 1658. Hic situs est.* Mr. Gifford of Colchester, who married the Serjeant's daughter (who by order of the House took up the body) had, in 1719, the plate.'

shown

shewn, that Cromwell had just as much right to erect a new Monarchy, as the long Parliament had to establish a new Commonwealth upon the ruins of our old Constitution (o). Another writer has laboured to vindicate the long Parliament, by shewing that they had the welfare and reputation of their country more at heart than Cromwell (p). The learned and ingenious Abraham Cowley has excelled all others, as well in respect to the matter as the manner of representing his actions and administration in the different lights of praise and censure, so that his performance may be justly esteemed the most perfect of any, as it is indeed, beyond comparison, the most beautiful of all that have been written upon this subject (q). It is said, that Cardinal Mazarine styled him a fortunate madman (r). Father Orleans dislikes that character, and would substitute in its stead that of a judicious villain. The noble Historian, with better sense and better language, styles him, a brave wicked man (s). A certain writer, very conversant in the history of those times, would persuade us, that a foreign author has given us the justest idea of Cromwell in these few words: He was a Tyrant without vices, and a Prince without virtues (t). This, perhaps, is a character not easy to be understood. A certain Prelate of our own nation, has a very judicious reflection upon his death: he says, His life and his arts were exhausted together, and that, if he had survived longer, he would have scarcely been able to preserve his power (u). But it is not in general characters, or from the many lives that have been written of Oliver Cromwell, that we may hope to find what it imports us most to know, with respect either to his public or to his private character; and there is still wanting, though there seems to be now sufficient materials, a candid, circumstantial, and sensible account of both. As to the first, the world may justly expect to be satisfied how his domestic administration was conducted, what measures he pursued for the general benefit and advantage of the people, what superior and extraordinary blessings he procured, what oppressions he removed, what grievances he detected and took away, what respect he paid to the laws, and with what revenue he was pleased to be contented. These are things that would give us a true and rational notion of his title to fame, considered as the possessor of supreme power, by what means soever attained, or held by whatever title [22]. As to

[22] Or held by whatever title.] It has been said, by such as were desirous of raising the character of Cromwell, that the nation was much benefited by his Government; that there was nothing of pomp or needless magnificence in his dress, his equipage, his household, or in his way of living (221); that his ears were open to complaints and to informations of every kind; that he was familiar with his old friends, and with the officers and soldiers of the army, after his advancement to the supreme power, which shewed that he had not either pride or vanity (222); that he shewed much justice in all private affairs, administered those of the public with frugality, and paid both his civil and military officers punctually (223); that he kept up a great face of religion in his own Court, and through the nation; that he always professed himself for liberty of conscience, and shewed a very high zeal for the Protestant religion (224); that Westminster-hall was never filled with Judges of greater learning and worth, than in his time (225); that his army observed the strictest discipline, and were not troublesome in their quarters (226); that he was beneficent to learned men; that trade flourished in his time (227); and that in spite of the badness of his title to, and the means by which he acquired power, he was universally respected at home and abroad (228). Now there are also some few particulars that deserve notice on the other side. It is observed that Cromwell's motion to the supreme power was progressive, and that his state augmented as it went: he took possession of the King's lodgings at Whitehall, when he was only General; he prevented several Palaces from being sold while a private man, that he might possess them in a princely character (229); he gradually increased his great officers, to the very end of his life; and, by a stroke of prerogative for which none of our Kings set him a precedent, would have made a house full of new Peers at once (230). Our former Kings swore to maintain the laws and liberties of their people, the meaning of which was very well known and ascertained; but Cromwell's *Instrument of Government* was of his own making, so that his oath to maintain it was only swearing he would govern by his own will (231). Yet this was not kept, for the *humble Petition and Advice* was a new model of Government, which, as perfect as it was, needed a *Supplement*, and had it; so that a Government fre-

quently changed, and changed by the will of him who administered it, was most certainly an arbitrary Government, if there ever was one in the world (232). He might be familiar with his creatures, and it was necessary he should be so with his officers; yet not only Hollis and Ludlow, but even Whitlocke (233) says, he took upon him great state; and Sir Philip Warwick (234), without intending him any hurt, confirms the same thing. There was a strange kind of splendor in his time at Whitehall; for sometimes his Court wore an air of stately severity, at other times he would unbend himself and drink freely, though not to excess, that he might have an opportunity of sounding then men's thoughts, in their unguarded moments, of fishing for secrets in a free conversation, and of ravishing opinions by unexpected questions, for all which he was admirably qualified by nature, having two qualities that seldom meet in the same person, a memory retentive as marble, and a judgment that pierced like lightning (235). Sometimes, even in the midst of serious consultations, he started into buffoonry; sometimes, the feasts that were prepared for persons of the first distinction, were, by a signal of drums and trumpets, made the prey of his Guards (236); there was a kind of madness in his mirth, as well as of humour in his gravity, and much of design in all. His justice, when not at his own expence, was his interest; but the cases of Lilburn, Coxe, and Sir Henry Vane, afford no great proofs of his sacrificing interest to justice when he could not comply with both (237). As to frugality, there are some facts that will not allow us to believe their assertions. When he turned out the Long Parliament there were five hundred thousand pounds in their coffers, the value of seven hundred thousand pounds in their magazines, the army three or four months pay in advance, the fleet in an excellent condition, and nine hundred thousand pounds *per annum* had been refused for the customs and excise: when he died, the state was much in debt; while he lived, it was always embarrassed; his army was often in arrear, and the fleet in great decay (238). When he first seized the government he levied money by his own authority; afterwards very large sums were given by assemblies that had no title to be called Parliaments; yet all could not suffice, even the addition of the vast sums raised by decimating the Cavaliers; which was a direct

to foreign affairs likewise, though very much has been said about them, we are nevertheless greatly in the dark. It is to be examined, not only whether the British nation was respected and revered by her neighbours, but whether her interests were thoroughly understood, and steadily prosecuted. We ought to know what measures were taken to protect, to improve, and to extend our commerce. We ought to be satisfied whether she retained that weight, as well as that rank, which she held before amongst the powers of Europe, and whether more respect was not had to the deference paid to the Government, than to the advantages yielded to the Nation. We should be particularly careful to learn whether a due attention was preserved to the balance of power, and whether the unquestionable rights of the English flag were maintained in as high and ample a manner as they might have been; and, in short, whether, without the bounds of our own dominions, the nation was the better or the worse for his directing her affairs [RR]. Lastly, as to his

rect breach of the public faith, so much the more gross, as he valued himself upon obliging the Parliament to pass the Ordinance of Oblivion, and, when they came into power again, the Long Parliament declared their abhorrence of it (239). It is not easy to know what is meant by the face of religion; but this is certain, that religion never wore so many faces as in his time, nor was he pleased to discover which face he liked best. The Presbyterians he hated, the Church of England he persecuted, against the Papists he made laws, but the Sectaries he indulged; yet some of the Presbyterian Divines he courted, affected kindness to a few of the Ministers of the Church of England (240), and entered into some very deep intrigues with the Papists; which made Sir Kenelm Digby his favourite, Father White write in defence of his Government, and, which was more, of his conduct; and the Popish Primate of Ireland, Reily, who boasted that he hated King Charles II. the two Dukes his brothers, and the Duke of Ormond, sent precepts through all his province, under his seal, to pray for the health, establishment, and prosperity, of the Protector Cromwell and his Government (241). He is charged with exciting a great charitable collection for the distressed Protestants abroad, sending them a part, and making free with the rest (242). As for the Judges in Westminster-hall, he differed with St. John; he was sometimes out of humour with Hale; he set up High Courts of Justice, unknown to the law, and put Dr. Hewett to death for not pleading before one of them, though he offered to plead, if any one that sat there and was a Lawyer, would give it under his hand, that it was a legal jurisdiction (243); and Whitlocke himself owns, that though he was named in the Commission he would never sit, because he knew it was not (244). His Majors-General, while they acted, superseded all law; and the Protector himself derided *Magna Charta*, so much respected by our Kings (245). The discipline of his army was necessary to his own security, and he taxed this nation to maintain twenty thousand foot and ten thousand horse; whereas the King that he brought to the block had not a Troop of Guards (246). Yet, after all, he had not much to boast in this respect, if we may credit Mr. Coke (247), whose words are these: 'he had nothing to trust to but a mercenary army, which he could not pay, and above half of those would have been content to have cut his throat.' He was kind to some learned men indeed: Milton and Marvell were his Secretaries, and though he banished Biddle the Socinian, he allowed him a pension (248); would have hired Meric Casaubon to have written his History (249); and would have entertained Thomas Hobbes in his service for writing the *Leviathan*, in which power is made the source of right and the basis of religion (250). He gave the body of Archbishop Usher a public funeral in Westminster-abbey; yet he paid but half the expence, and the other half proved a heavy burthen upon that Prelate's poor family (251). As to the reverence of the nation, a certain writer, speaking of the last days of his life, describes his situation thus (252): 'His means would not pay for the intelligence he was forced to buy at home and abroad, to discover the practices which were every day hatching against him; so as he had no security but in the general fear, which all the factions as well as he had, that their discords might give an occasion of restoring

the King, to the ruin of them all.' Bishop Burnet (253) also confirms this, as we have hinted in the text, and the reader will observe, that through this whole note there is nothing delivered but from authorities; and though it is a long one, much more is omitted than inserted. Those who would see things as they were, will trust to such accounts as are supported by facts, and not to florid characters, which are frequently but beautiful fictions.

[RR] For his directing her affairs.] All who are tolerably versed in the history of those times know, that such as labour to magnify the Protector's Government, insist principally upon the advantages he gained over foreign states, and the terror which he imprinted throughout all Europe, of the English fleets and forces. He is represented as the conqueror of the Dutch, as the great author of their submission to, and acquiescing in, an inferior character of maritime power. With respect to this nation, he is said to have achieved what Queen Elizabeth had left imperfect, and what the two last Kings had meditated indeed, but never could bring about. He is reported to have retrieved the honour of the nation with respect to the business of Amboyna; and, in short, to have given, or rather, to have prescribed, a peace to the Dutch upon his own terms (254). In reference to the Mediterranean, he is called the scourge of the pyratel states, whom he did not barely reduce to reason, but taught humility (255). The Portuguese not only sought his friendship of their own accord, but besought it upon such conditions as he should be pleased to grant (256). Spain too courted his alliance, and would have purchased it at a very high price, if his amity might have been set to sale: but his hatred to a power that durst not give up the Inquisition, his sense of the Merchants wrongs, and innate abhorrence of a bigotted Popish people, withheld him from closing with their propositions, and induced him to signalize his power by reducing them to the lowest distress, and that by entering into a treaty and alliance with France (257). This alliance was at the humble and earnest suit of that power, willing to make any concessions which might procure his good-will, and ready to subscribe such propositions as he judged reasonable for the grounds of their new friendship (258). By this means it is said he obtained a better treaty of commerce than had been settled with that nation in former times: by this he signalized his credit with the first power in Europe, and was treated with deference, not to say submission, by that Crown that to others was often wanting in respect (259). By this means he reached over to, and gained footing upon, the Continent, repaired to England the loss of Calais, and laid a foundation for designs wonderfully great in themselves, which he did not live to execute (260). But, as if bringing the Dutch to submit, giving law in the Mediterranean, and being courted by France, was not sufficient, he made himself also the umpire of the North, and secured, in the highest degree, the attachment of the Swedish Monarch, who owed to his friendship his making so formidable an appearance, as hardly yielded to that of his glorious predecessor Gustavus Adolphus, the support of the Protestant religion, and the scourge of the House of Austria (261). These, say they, were the great acts of Cromwell, by which he made himself, and the nation he ruled, awful in the eyes of their neighbours, secur-

his private life, it certainly merits our notice in all its several branches and relations, since it is thence only that we can be instructed to decide, with probability, as to the principles even of his public actions; for men of different dispositions, act in the same manner, upon certain occasions, from very different motives; and of these there is no judging, but from an acquaintance with their tempers; which can be no other way so well known, as from the relation of their private and domestic behaviour. Besides, there is a natural curiosity to enter, as it were, into the privacies of extraordinary persons; which is a kind of slipping behind the scenes, and taking a more nice and certain view of their conduct, by getting on the wrong side of the theatre. Men, called into high spheres of life, naturally become actors, and wear the robe and buskin thence forward in public, so that we can judge but little of their real disposition from their actions, unless we obtain a kind of key from the knowledge of their private life; so that circumstances which, with respect to others, would be frivolous and impertinent in regard to them, are very useful

ed them the full enjoyment of all that they could justly claim, and gave them a great facility in acquiring whatever more they wished. Such, if we look into certain books, were the deeds, and such the honours due to the Protector. But, on the other hand, it is observable, that these high eulogies were very boldly questioned in his own times, and that too not by envious declaimers, who meant to shew their eloquence in satire, or their skill in cavilling, but by men of the first rank, who undertook to contradict the facts, and to shew that the whole scheme of his foreign politics was either false in its principles, or narrow in its foundation. They bid us remember it was the long Parliament, not he, that beat the Dutch; and though we should give no credit to what has been insinuated, that he was encouraged by them to revolt from and turn out his matters, yet most evident it is, that he relaxed in his demands, and made a peace upon lower terms, not that had been demanded only by, but had been submitted to in respect to, the Parliament. He remitted the three hundred thousand pounds, which the Dutch had offered that Assembly for the damages sustained during the war; he did not insist upon an annual revenue for the liberty of fishing in our seas; he insisted upon no other proof of our sovereignty at sea than the ceremony of the flag; and even in respect to the business of Amboyna, the satisfaction obtained was not substance but shew; for, though strongly worded in the treaty, yet being referred to Commissioners, it came to nothing, any more than the restitution of the Island of Poleron, which was stipulated indeed, but never complied with (262). Not that Cromwell wanted force sufficient to have compelled what he pleased; but the expulsion of the King out of the dominions of the State, and the exclusion of the Prince of Orange from the dignities due to his family; the consenting to which was a violation of the Dutch Constitution, were, though private advantages only, accepted as equivalents for the benefits that might have been obtained for the nation (263). What there was therefore of honour in the Dutch peace, belonged of right to the Parliament, under whose auspice all the victories, save one gained by Monk, were obtained that procured it; and most of those great points they insisted upon had been claimed by King Charles and King James, as one of their own advocates acknowledges, in a piece dedicated to themselves (264). With all the rest of Europe the English Commonwealth was at peace: the King of Portugal's addresses were in consequence of the Parliament's resenting his protection of Prince Rupert, and, besides, in the situation of that Crown, it was no wonder they made any advances to the first maritime power in Europe (265). The glory of the English flag in the Mediterranean has been justly ascribed to Blake, who was truly an honour to his country, but not mighty well satisfied with Cromwell's Government any more than Monk was with the Dutch Treaty, which he was not afraid to declare was a base piece of treachery (266). In his quarrel with Spain, he acted as imprudently as unjustly; for the Spaniards had courted the Commonwealth earlier than any other power in Europe, and, with respect to Cromwell, had declared their willingness to guaranty his own and his successors government, as professing an implacable aversion to the Royal Family, and a resolution to exclude that line from the

Throne, from motives of interest (267). They were willing to have carried on a war against France in conjunction with Cromwell, upon very easy terms, or would have closed with him without insisting upon his taking part in that war at all. The Protector entertained a treaty which he never designed should come to any thing, while he provided for a war, which, from a prospect of advantage, he had been bent upon from the beginning, and began without publishing any declaration (268); all this in the very teeth of the English interest, at that time in the sole possession of the whole Spanish trade, which was the great source of our riches (269). It was this that induced him to enter into a league with France; and the reason that led him to prefer the friendship of that power was, the excluding the Royal Family out of it's dominions, which, joined to the exclusion already obtained out of the territories of the States, and his project of getting the ports in the Spanish Low-Countries into his own hands, shews *what* was the ruling maxim in his politics; which is very ingeniously acknowledged, and all the particulars clearly set forth, in a paper of Thurloe's (270). As to his management in the North, it was of a piece with the rest; that is, he did all that lay in his power to destroy the balance (271), by making the King of Sweden master of Denmark and the North, which had been effected, if it had not been for the Dutch, who understood and pursued their own interests better. For, had his scheme been brought about, he must have laid himself at the mercy of Sweden and France, who, being old allies, would have had it in their power to give law to all Europe (272). This being so visibly the aim of France, it shews plainly why Cardinal Mazarine paid such excessive court to Cromwell, and perhaps it may give some light, why he stiled him "a fortunate madman;" *fortunate*, because, by the bravery of English seamen and soldiers, he obtained all he sought; and *madman*, because, to the temporary security of his own establishment (273), he sacrificed the interests of his country, the balance of power, and the tranquility of Europe, which former Kings had always maintained; and the very last King, Charles the First, had prevented the French and Dutch from dispossessing the Spaniards of the Low-Countries, and dividing them between them (274); which plan Cromwell not only accepted but executed. What influence these errors in policy had upon the state of this nation, at home and abroad, may be shewn from facts that admit of no dispute; such as the sinking of our coinage (275), the declension of the city of London in the number of its inhabitants (276), the loss of countries in America, where the Dutch were permitted to keep the New Netherlands, now stiled New York and the Jerseys, though our right to them was incontestible (277); from the decay of the navy, and from the loss of a great part of the Spanish trade; to which may be added, the laying the foundation of all the subsequent wars for reducing the exorbitant growth of France, which he assisted, and which without his assistance, and his weakening the Spanish monarchy as he did, could not have been attained (278). These are to be considered as brief heads for that examination, the necessity of which is suggested in the text, in order to the forming a true and impartial judgment of his administration as to foreign affairs.

(285) Account of the engagements at Triploe-Heath and at Dunbar, p. 31.

[SS] *Are very useful as well as entertaining.*] It is really not a little strange, that, considering Cromwell was towards forty when he first distinguished himself in opposing the project for draining of fens, that we should know so little of his private life; and how little this is, the reader has already seen, most of the circumstances that deserve credit being mentioned either in the text or in the notes (279). Yet some few there were who knew and understood him thoroughly, before his extraordinary talents were made known to the world, and in particular his cousin Hampden, of which this was a remarkable instance (280). When things ran high in the House of Commons, Mr. Hampden and the Lord Digby were going down the Parliament stairs, and Cromwell just before them, who was known to the latter only by sight: *Pray*, said his Lordship to Mr. Hampden, *who is that man, for I see he is on our side by his speaking so warmly to-day? That sloven*, returned Mr. Hampden, *whom you see before us, who hath no ornament in his speech, that sloven, I say, if we should ever come to a breach with the King, which God forbid! in such a case, I say, that sloven will be the greatest man in England.* This prophecy, which was so fully accomplished, rose chiefly from the sense that great man had of Cromwell's indefatigable diligence in pursuing whatever he undertook: and, in truth, he had this remarkable quality in a very high degree, for whatever he had in view, remained ever in his thoughts, and every thing he said or did was some way calculated to promote it; so that if steadiness, vigilance, and address, could attain any point, as indeed what point is there they will not attain, he was sure to accomplish whatever he thought worthy of undertaking (281). He had another quality, which was equally useful to him, and that was, discerning the temper of those he had to deal with, and dealing with them accordingly. Before he became Commander in Chief, he kept up a very high intimacy with the private men, taking great pains to learn their names, by which he was sure to call them, shaking them by the hand, clapping them on the shoulder, or, which was peculiar to him, giving them a slight box on the ear, which condescending familiarities, with the passion he expressed for their interests, gave him a power easier conceived than described (282). He tried to inveigle the Earl of Manchester; but finding his sentiments of another kind, he fell upon him in the House of Commons, and procured his removal. He carried himself with so much respect to Fairfax, that he knew not how to break with him, though he knew that he betrayed him (283). He not only deceived Harrison, Bradshaw, and Ludlow, but outwitted Oliver St. John, who had more parts than them all, and foiled Sir Henry Vane with his own weapons. In short, he knew men perfectly, worked them to his purposes, as if they had been cattle, and, which is still more wonderful, did that often while they conceived that they were making a tool of him (284). His strength of mind, or strength of head, call it which you will, enabled him to impose even upon the greatest bodies of men. He led the resentment of the House of Commons against the Army, till the latter were in a flame, and very angry with him: when he came to them, it was upon a flea-bitten nag, all of a foam, as if he had made his escape; and, in this trim, he signed the engagement at Triploe-Heath, throwing himself from his horse upon the grass, and writing his name as he lay upon his belly (285). He had yet another faculty beyond these, and that was, the art of concealing his arts. He dictated a paper once to Ireton, which was imposed upon the Agitators as if founded upon their instructions, who sent it express by two of their number, Sexby (who conspired against him when Protector) and Lavinby, to Cromwell, then Lieutenant-General, at his quarters at Colchester. He was in bed when they came, but they demanded and had admittance. When they told him their commission, he asked them, with the greatest rage and resentment in his looks, how they durst bring him papers from the Army? they said, That paper contained the sense of the Army, and they were directed to do it. Are

you sure of that? said he, with the same stern countenance, Let me see it. He spent a long time in reading it, and, as it seemed to them, in reflecting upon it: then, with a mild and devout look, he told them it was a most just thing, he hoped that God would prosper it, adding, *I will stand by the Army in these desires with my life and fortune* (286). In the course of his life he was temperate and sober, and despised those that were otherwise. He knew perfectly well the means of conciliating friendship, in which he was very constant to those who went all his lengths, as the Earl of Warwick, and some others, did (287): and could be very civil to such as disapproved his measures, provided they did not oppose them, which was the case of St. John, Whitlocke, and others (288): but if they differed with him, he forgot all former ties, as appeared by his imprisoning Sir Henry Vane, removing Major-General Harrison, and obliging the Lord Viscount Say and the Lord Grey of Groby to live in a kind of voluntary exile (289). In his family he shewed great kindness, but without any diminution of his authority. He was very respectful to his mother, and very tender towards his wife (290); yet neither had any influence over him: he expressed a deep sense of the concern which the former expressed for his danger, heard whatever she said to him patiently, but acted as he thought proper, and, in respect to her burial, directly against her dying request (291). The latter is said to have made a proposition, tending towards restoring the King, but he rejected it (292), as he had before shewn himself unmoved, when his son Richard threw himself at his feet, to dissuade him from taking King Charles's life (293). He did not seem to take amiss applications of the like kind from other persons, as from Whitlocke (294); but that Gentleman thought he lost his confidence by it; from the Marquis of Hertford, whom he treated very respectfully (295); and from Dr. Brownrigg, Bishop of Exeter, to whom he shewed more kindness than to any other man of his rank and profession, and of whom, with some earnestness, he asked advice (296): *My advice*, said the good Prelate, *must be in the words of the gospel; Render to Cæsar the things that are Cæsar's, and to God the things that are God's:* to which he made no reply. All this shews a very great, a very unusual calmness of mind; yet he was naturally hasty and passionate, which those who were about him sometimes felt (297); but he knew how to compose matters again by a proper and an immediate condescension, of which he gave a strong instance to Lord Broghill, and another to Secretary Thurloe. He knew the force of family connections, and employed them very successfully. It was by this that he managed Ireton, and afterwards Fleetwood (298). The dealers in secret, or rather, scandalous history, say, he found another method of managing Lambert; which there is no need to believe, since it is visible that he cajoled him for a long time with the hopes of the succession (299). He married all his daughters well, and was kind to their husbands; but it is said he gave them no fortunes, which, if true, must have been because it was not in his power. Some have wondered that he did not court the alliance of some foreign house; and something of this kind was once spoken of for the Prince of Conde, for whom he had a particular kindness, and aimed at making him great in the same way as himself: he served in the Spanish army against his natural Prince; the Protector was for making him a Sovereign at the expence of the Spaniards he served, by giving him the best part of their Low-Countries; but the French would not agree to this, and so it came to nothing, as the business of the match had done long before. He is censured for keeping his eldest son at a distance from business, and for giving him no employments (300); but for this, perhaps, there is not any just ground. He married him to a Lady who brought him a good fortune: he suffered him to pursue the bent of his inclinations, and to lead the life of a plain, honest, country Gentleman; which, for a time, was highly suitable to his

(w) From the parish-register of St. John's Huntingdon.

Cromwell was born the 4th, and baptized the 19th of October, 1626, and died July 13th, 1712, at Cheshunt in Hertfordshire (w). 2. Henry Cromwell, born January the 20th, 1627, christened the next day, died March 25th, 1674 (x). (1.) Bridget, who first married Commissary-General Ireton, and, after his decease, Lieutenant-General Fleetwood. As both her husbands were zealous Republicans, she had no small tincture of the same spirit, which was very displeasing to her father. In other respects she was a woman of very good sense, regular in her behaviour, and was highly instrumental in promoting the interests of her second husband, who was very much guided by her advice (y). (2.) Elizabeth, born *Anno Domini* 1630; she married John Claypole, Esq; a Northamptonshire Gentleman, whom the Protector made Master of the Horse, created him a Baronet July 16th, 1657, and appointed him one of his Lords (z). (3.) Mary, who was married, with great solemnity, to the Lord Viscount Fauconberg, November 18th, 1657, but the same day more privately, according to the office in the Common-Prayer Book. She was a Lady of great beauty, and of a very high spirit; one who, after her brother Richard was deposed, is thought to have promoted very successfully the restoration of King Charles. Her husband was sent to the Tower by the Committee of Safety, and was in very high favour with King Charles the Second. He was raised to the dignity of an Earl by King William, and died on the last day of the year 1700. His lady survived him to March 14th, 1712, and distinguished herself to her death, by the quickness of her wit and the solidity of her judgment (a). (4.) Frances, his youngest daughter, was twice married; first to Mr. Robert Rich, grandson to the Earl of Warwick, November 11th, 1657, who died the 16th of February following; and afterwards to Sir John Russell, of Chippenham in Cambridgeshire, by whom she left several children, and lived to a great age (b). One, who pretends to a great acquaintance with the family, gives us an extraordinary story of this Lady in the earlier part of her life (c) [TT].

(309) True Character of O. Cromwell.

own interests, as it seemed to correspond with the terms of the *Instrument of Government*, and the dislike which the Protector, when first so called, expressed of hereditary right (301). When he had afterwards brought about a change in affairs, he altered, at the same time, his conduct towards his son, named him the first Lord in his other House, resigned to him the Chancellorship of Oxford (302), and went as far as he could go, for fear of disobliging Fleetwood. His second son, Henry, he sent over into Ireland, where he raised him gradually to the post of Lord Lieutenant (303). Though in this he seemed to give him the preference, yet in reality he used him more harshly than the other; for, though his abilities were good, his manners irreproachable, and his submission exemplary, yet he paid no great deference to his recommendations, and allowed him far less power than could well be imagined (304). His daughter Claypole was his favourite, and her husband had much of his confidence: he was master of his horse, and had the Court secret in the House of Commons (305). It is however to be observed, that as his government was distracted and disturbed, so he was unhappy also in his family. Neither of his sons thought his establishment secure or well founded. His daughter Fleetwood was a Republican, and so were many others of his nearest relations: all the rest of his daughters had a secret kindness for the Royal Family, of which however he was not ignorant (306). He shewed a great respect for learning and learned men, without affecting to be learned himself. His letters are however the best testimonies of his parts, for they are varied in their style in a very wonderful manner, exactly adapted to the purposes for which they were written, and the persons to whom they were addressed (307). His public speeches were long, dark, and perplexed; and though mixed with the language of the times, which was cant, yet have sentiments in them that shew very clearly the superiority of his understanding (308). In his conversation he was easy and pleasant, and could unbend himself without losing his dignity. He made an excellent choice in those he employed, but trusted none of them farther than was necessary (309). It may seem strange, that in drawing together his character, there should be nothing said of his principles as to government or religion; but the plain truth is, neither can be discovered with certainty. We know that he hated a Commonwealth and the Presbyterians, but what his sentiments were in other respects it is hardly possible to say. When he recollected himself, after the follies of his youth, there seems to be no doubt that he had serious impressions of religion; and there seem to be very strong proofs, that he was afterwards

tinctured with enthusiasm (310). In the time of his greatest elevation, to suppose him a Fanatick, seems injustice to his parts; to affirm, as some have done, that he lost all sense of religion, is more, than, at this distance of time, any authorities will warrant. Such as entertain the best opinion of him allow, that he fell into deep and dangerous errors, particularly in believing that success was a mark of the divine approbation (311). Those who speak worst of him, charge him with a contempt of all things sacred (312). But, in a matter of this obscurity, let us call in the assistance of one, who knew him well, and could judge of him in that respect much better than we (313). This is the famous Mr. Baxter, who speaks very sensibly and clearly to the point. 'His name standeth as a monitory monument, or pillar to posterity, to tell them the instability of man in strong temptations, if God leave him to himself: What great successes and victories can do, to lift up a mind that once seemed humble: What pride can do, to make men selfish, and corrupt the heart with ill designs: What selfishness and ill designs can do, to bribe the conscience, and corrupt the judgment, and make men justify the greatest errors and sins, and set against the clearest truth and duty: What bloodshed and great enormities of life an erring deluded judgment may draw men to and patronize; and that when God hath dreadful judgments, an erroneous sectary, or a proud self-seeker, is oftener his instrument, than an humble lamb-like innocent saint.' It is somewhat strange, that so great a man as the Earl of Clarendon (314), should mention the Protector's speaking kindly of Bishops, and as if there was something good in that order if the dross was scoured off; so as to shew he took him to be really in earnest. The whole course of Cromwell's life proves, that he was not at all steady to the form of religion, supposing that he retained any principles at the bottom; and there seems to be very little doubt, that the true meaning of these flattering expressions was, his desire to return to the old form of government; for, whatever he pretended, that was his great aim. He did not overturn the constitution to leave it in ruins, but to set it up again, and himself at the head of it (315); and though he compared his own government at first to that of a High-Constable, yet there is nothing clearer, than that all he laboured for afterwards was to get the chaos new moulded, and his own authority sanctified by the regal title, and the appearance of a legal Parliament (316).

[TT] Gives us an extraordinary story of this Lady in the earlier part of her life.] We have this story in several books; but the best account of it that I have met

(317) Oldmixon's History of the Stuarts, vol. i. p. 426.

met with is in the History of the Stuarts, written by Mr. Oldmixon, which therefore I shall give the reader in his own words (317): "One of his domestic Chaplains, Mr. Jeremy White, a sprightly man, and a top wit of his Court, was so ambitious as to make his addresses to Lady Frances, the Protector's youngest daughter. The young Lady did not discourage him, and this piece of innocent gallantry, in so religious a Court, could not be carried on without spies. Oliver was told of it, and he was much concerned at it; obliging the person who told him to be on the watch, and told him if he could give him any substantial proof he should be very well rewarded, and White severely punished. The spy followed the matter so close, that he hunted Jerry White, as he was generally termed, to the Lady's chamber, and ran immediately to the Protector with this news. Oliver, in a rage, hastened thither himself, and going in hastily, found Jerry on his knees, kissing the Lady's hand, or having just kissed it. Cromwell, in a fury, asked, What was the meaning of that posture before his daughter Frank? White, with a great deal of presence of mind, said, May it please your Highness, I have a long time courted that young gentlewoman there, my Lady's woman, and cannot prevail; I was therefore humbly praying her Ladyship to intercede for me. The Protector, turning to the young woman, cried, What's the meaning of this, huffy? Why do you refuse the honour Mr. White would do you? he is my friend, and I expect you should treat him as such. My Lady's woman, who desired nothing more, with a very low curtesy, replied, If Mr. White intends me that honour, I shall not be against him. Sayst thou so, my lass? cried Cromwell, Call Godwyn. This business shall be done presently, before I go out of the room. Mr. White was gone too far to go back: the Parson came; Jerry and my Lady's woman were married in the presence of the Protector, who gave her five hundred pounds for her portion; and that, with the money she had saved before, made Mr. White easy in his circumstances, except in one thing, which was, that he never loved his wife nor she him, though they lived together near fifty years afterwards. I knew them both, and heard this story told when Mrs. White was present, who did not contradict it." This singular story I was induced to insert for several reasons, being well assured, that, independently of Mr. Oldmixon's credit, who, in matters of this nature, was however a person very well informed, the facts upon which it depends are absolutely true, and were often related by Mr. White himself; and, if I have not been misinformed, to his Majesty King Charles II. It is an admirable instance of the Protector's sagacity in keeping spies within doors and without, as well as a most pregnant proof of his presence of mind, and great dexterity in finding and applying the proper remedy at once, and upon the first discovery of the disease, however sudden or unexpected. That these notes have not been loaded with many particularities in relation to the wonderful nicety and amazing extent of Cromwell's intelligence, is owing to more causes than one. The relations themselves are common enough, and almost in every body's mouth: in the next place, they are not so wonderful as is commonly imagined; for all governments have their spies and secret intelligence, though they are not desirous of making this known to the world. Yet we must not imagine that it was ignorance in Cromwell, or in his Minister Thurloe, to publish so much upon this head: for whereas in other governments the great point is, to gain intelligence without its being known; in respect to his it was quite contrary, for his interest consisted in being thought to have better and quicker intelligence than he really had. Lastly, though this did infinite honour to his administration, yet in reality it shewed the weakness of his government; and therefore it is a right remark of Mr. Coke, that it kept him always necessitous, and was in reality that gaping gulph, through which all the money that he could amass slipped away; so that it might be truly said, that if he was preserved by it in one sense, he was undone by it in another; and therefore, when the public accounts came to be examined in Richard's Parliament, what was issued for secret service was not only thought extravagant but impossible: and indeed, how much soever it may

astonish vulgar Politicians, refined Statesmen will very hardly allow, that a government which cannot subsist but by the distribution of vast sums in this way, is to be either admired or applauded; because the excellence of government consists in managing public affairs well, and without exorbitant expence; so that the best government is that which is at the least charge. These reflections detract nothing from the Protector's skill or abilities. It is a misfortune to meet with continual storms in a voyage; but the Pilot nevertheless deserves praise, who secures his vessel from perishing in those storms, and still more praise, if the vessel itself be rotten and leaky. C.

* * [In the copious and candid account which our ingenious predecessor, Dr. Campbell, has given of the Life of Oliver Cromwell, there are but few things to which any just exceptions can be made. The Doctor is probably wrong in his assertion, p. 478, that Cromwell was so far from having any interest at Cambridge, that in reality he was not so much as known there, and that if he had been known he would never have been elected Member of Parliament for that town. Not to mention his having been educated at Sidney College in that University, it was not likely that a Gentleman who lived so near as Huntingdon, and who was of so active a spirit, should have been totally a stranger at Cambridge. Besides, it is certain, that his zeal in opposing the drainage of the Bedford Level, must have already acquired him some degree of popularity.]

There is another circumstance in which we cannot agree with our able Predecessor, or with Lord Clarendon, on whom the remark is founded. Speaking of the Remonstrance which was carried on the 14th of November, 1641, Dr. Campbell says, that "if Zeal for the Church, or Duty to the King, could have kept ten more of those, who made such strong professions of both, from their suppers and their beds for a few hours, all the consequences of that fatal night had been prevented." p. 479. But we can scarcely think that the whole future fate of the nation depended on the failure of so small a number of persons, on a single occasion. If the remonstrance had at that time chanced to have been lost by one or two votes, the spirit of the party in opposition to the measures of the Court was too high, and they were too strongly supported by a powerful body in the nation, to be easily discouraged. They would probably have seized every opportunity of renewing and urging the business, till it was crowned with success.

It is a mistake to assert, as is done in note [CC], that Barebone's Parliament had voted that the common law was a badge of slavery. No such resolution occurs in the proceedings of that Assembly, as stated in the Parliamentary History. They did, indeed, revive the consideration of a bill which had been proposed in the last Parliament, for correcting the grievances and inconveniences of legal proceedings, and a Committee was appointed for forming a new body or model of the law. But the design of this appointment was not to destroy the law or put it down, as was falsely reported, but to separate laws that were useless and out of date from the wholesome, just, and good ones, and to reduce the last into a desirable system. It is true that the same Parliament voted the abolishment of the Court of Chancery; but, even in this case, it was ordered that provision should be made for deciding matters of equity for the future, in a method that should be less tedious, expensive and troublesome to the suitors (318). By the way, Barebone's Parliament has been treated with unjust contempt by the greater part of our historians, and they have passed over its Proceedings in a very slight and superficial manner. Mrs. Macaulay stands exempted from this censure. It is a fact that this Parliament was not destitute of some able men, who formed several important designs for the public welfare. The transactions of that Assembly are fully related in the Parliamentary History, the narrative of which is concluded with the following observations. "We are very far from entering into a vindication of this unconstitutional Assembly. It is certain that the manner of their being convened, in obedience to Cromwell's Warrant of Nomination, was the most flagrant

(318) Parliamentary History, vol. xx. p. 189. 193. 234.

"flagrant instance of invasion upon the rights and liberties of all the Electors of the three nations, our whole history affords, and was absolutely subversive of the very being of Parliament. But whether they deserve all the ignominy which has been cast upon them by the contemporary historians we have cited in our account of their transactions, and some modern writers who have implicitly copied them, will best appear by the laws they made, and the bills they were employed about at the time of their dissolution (319)."

(319) *Parl. Hist.*
vol. xx. p. 179,
180.

Vowell, the Schoolmaster, mentioned p. 501, as having been executed at Charing-Cross, summoned Cromwell and his Judges to appear at the Tribunal of God, for the unjust sentence pronounced upon him (320).

(320) From a
Correspondent.

At first sight, it may seem very strange that Cromwell should amuse himself with such an exercise as that of driving a coach; but Bate, in his *Elenchus*, has explained this circumstance. "*Qui nephriticus erat, ac Arenulis multoties vexatus, varia nonnunquam ingurgitabat potulenta; deinde vehementiori aliquo ac multiplici Motu Corpus agitabat; puta Equitatione aut in Carruca, ut impetu facto Vesicam exoneraret* (321)." Thus it is probable that he had recourse to the extraordinary exercise described in the text for the purpose of obtaining some relief under the complaint of the gravel.

(321) *Ibid.*

The points in which our predecessor is most deficient, are with regard to the family and early life of Oliver Cromwell, though the information is as full as could at that time have reasonably been expected. These circumstances have lately been the result of very minute and anxious enquiry, and hence great light has been thrown upon them. The Gentleman to whom the public has been the most obliged in this respect, is the Rev. Mr. Mark Noble, who in his curious and entertaining work, entitled, "*Memoirs of the Protectoral House of Cromwell*," hath deduced the genealogy of the Cromwells from an early period, and given a particular account of every branch of the family. Mr. Noble, at the same time, has taken great pains to correct the errors of preceding writers upon the subject; and among other circumstances, hath shewn that our Predecessor was probably wrong in rejecting the idea that there was an affinity between Oliver Cromwell's Ancestors and John Lord Williams, who, after filling some of the most important offices under our Sovereigns, died in the beginning of the reign of Queen Elizabeth, without leaving male issue surviving. In opposition to what is asserted in note [A], Mr. Noble appears to have clearly proved, that the Cromwells had originally the Surname of Williams; and that there is not any foundation for the hearsay report of Fuller, that there was no relation between the Putney Cromwells and the family of the Protector Oliver (322).

(322) *Memoirs of the Protectoral House of Cromwell*, vol. i. p. 235—242.

For the history of the various branches of the Cromwells, preceding Oliver, we shall content ourselves with referring to Mr. Noble's work, with the exception of taking some notice of what is said concerning the Protector's father and mother.

Mr. Robert Cromwell had, by the will of his father, an estate in and near the town of Huntingdon, consisting chiefly, if not entirely, of possessions that formerly belonged to the Monastery of St. Mary for Augustine Friars, and amounting, with the great tythes of Hartford, to about three hundred pounds a year. His principal residence was in Huntingdon; and though he was a Gentleman of good sense, and of competent learning, he was so fond of private life, that he is supposed never to have wished for any employment in the state. His ambition was sufficiently gratified by a Seat for his own Borough, in the Parliament which was held in the thirty-fifth year of Queen Elizabeth's reign, and by a place upon the Bench as a Justice of the Peace. In 1600, he appears to have been one of the Bailiffs of Huntingdon; and in 1605, he joined with his brother Sir Oliver, and sixteen others, in subscribing a certificate to the Privy Council, that the work of draining the Fens in the counties of Northampton, Lincoln, Huntingdon, and Cambridge, was feasible, and might be performed without peril to any haven or county. With regard to a life like his, which furnishes little matter to a

VOL. IV.

Biographer, Mr. Noble observes, that the Philosopher can scarcely avoid reflecting upon the strange contrariety of men's minds, even among those of the nearest affinity in blood; since no character could be more opposite to this Gentleman's, than that of his son. From the happy and serene pleasures of domestic life, Mr. Robert Cromwell was prematurely taken, to the great grief of a beloved wife, and several children; the latter of whom were just of sufficient age to lament the loss. His remains were deposited at All Saints, in Huntingdon, on the twenty-fourth of June, 1617. By his will he bequeathed to Mrs. Cromwell two thirds of his property (exclusively of her jointure) for the term of twenty-one years, towards maintaining his daughters; and to his daughters he gave six hundred pounds, which were owing to him by his brother Whalley. Mrs. Cromwell's fortune is supposed to have consisted chiefly of the jointure she possessed from her first husband, who was William Lynne, Gentleman, son and heir-apparent of John Lynne of Basingbourne, Esq. It was to ease the expences incident to a numerous progeny, and which are so much felt where the estate is small, and the descent ancient, that Mr. Cromwell was obliged to carry on a large brewing business. This, however, was principally conducted by servants, whose accounts were entirely inspected by Mrs. Cromwell herself. It may hence be collected that her husband was rather of an indolent disposition.

Mrs. Cromwell was a careful, prudent mother, and brought up her family, after she became a widow, in a very handsome, though frugal manner. This she was chiefly enabled to do from the profits arising from the brewhouse, which she carried on upon her own account, and with so much success, that she gave each of her daughters a fortune sufficient to marry them to persons of genteel families. The respective Gentlemen to whom they were married are mentioned in note [C]. The greatest fondness of Mrs. Cromwell was lavished upon her only son; and his conduct to her was every way deserving of her affection. He always behaved to her in the most filial and tender manner; and when he had exalted himself to sovereign greatness, he assigned her apartments in the Palace at Whitehall, where she continued until her decease, which happened on the eighteenth of November, 1654. It was with reluctance that she partook of the pageantry of Sovereignty, and she remained undazzled with its splendour. Her regard for Oliver, and the apprehension she entertained of his danger, kept her in such constant alarm, that she was discontented if she did not see him twice a day. The report of a gun was never heard by her, without her crying out, "my son is shot." Though she was averse to Oliver's Protectorate, she seldom troubled him with advice: but when she assumed that liberty, he always heard her with attention, while, at the same time, he pursued his own measures. It was her dying request that her funeral might be a private one, and that her body might not be deposited in Westminster Abbey. In this respect, however, he acted directly contrary to her injunctions; for he conveyed her remains, with great solemnity, and attended with many hundred torches, though it was day-light, to the dormitory of our English Monarchs. This vanity, in burying his mother with the pomp of royalty, and the expence with which it was accompanied, gave much offence to the republicans. After the restoration, her body was taken up, and, together with others, was indecently thrown into a hole made before the back door of the apartments belonging to one of the Prebendaries of Westminster. Mrs. Cromwell was an amiable woman, and much beloved, not only by her own relations, but by those of her husband. Sir Oliver Cromwell is understood to have had a particular esteem and regard for her. There is an original picture of her in the possession of the Earl of Sandwich at Hinchinbrooke, with an engraving of which Mr. Noble has favoured the public. Another portrait of her, taken when she was only twenty-one years of age, belongs to the Miss Cromwells. There is also, at Hinchinbrooke, a picture of Mr. Robert Cromwell, in which there is a languor of countenance, that indicates him to have been a sickly man (323).

Memoirs, ubi
supra, p. 82—
87.

6 Q

Mr.

Mr. Noble has related some circumstances concerning the early life of Oliver, which should not be omitted. His infancy is said to have been marked by a peculiar accident which seemed to threaten the life of the future Protector. His grandfather, Sir Henry Cromwell, having sent for him to Hinchinbrooke, when he was an infant in arms, a monkey took him from the cradle, and ran with him upon the lead that covered the roofing of the house. Alarmed at the danger of the child, the family spread beds to catch him upon, fearing lest the creature should drop him: but the sagacious animal brought the fortune of England down in safety. Thus narrow was the escape which he, who was doomed to be the Conqueror, and the Sovereign Magistrate of three kingdoms, had from the jaws of a monkey.

Whilst Oliver Cromwell was at the Grammar-School in Huntingdon, he is generally represented as having manifested an aspiring, stubborn, and obstinate temper, by which he incurred the severe correction of his father, and the flagellation of his master, Dr. Beard, who, in his treatment of him, was obliged to exceed the discipline usual to youths of his birth and expectations. According to the account of his enemies, he was at this time the terror of the neighbourhood, by his depredations upon orchards and dove-houses. These circumstances have been magnified, by prejudiced writers, into enormous offences: but the only real inference from them is, that, like other active and spirited boys, he had a disposition that led him to playfulness and mischief. It is probable that his bold and daring turn of mind might often bring him into danger. When a youth, he was near drowning, but was saved by Mr. Johnson, a Clergyman. Many years after, as Oliver was marching at the head of his soldiers through Huntingdon, he recognized this Gentleman, and asked him if he did not remember saving his life. "Yes," answered the aged and loyal Curate of Cunington, "I do, but I with I had put you in, rather than see you in arms against the king (324)."

(324) Noble's
Memoirs, *ubi*
supra, p. 92—
94.

As is usual with regard to extraordinary persons and characters, several circumstances are given relating to Oliver, which were supposed to have been prognostications of future greatness. There is a tradition at Huntingdon, that when King Charles the first, then Duke of York, in his journey from Scotland to London, in the year 1604, called at Hinchinbrooke, the seat of Sir Oliver Cromwell; that Knight, to divert the young Prince, sent for his nephew Oliver, that he, together with his own sons, might play with his Royal Highness. They had not, however, been long together, before Charles and Oliver disagreed; and, as the former was then as weakly as the latter was strong, the Royal Visitant was worsted. So little was dignity regarded by Oliver, even at that early age, that he made the blood flow in copious streams from the Prince's nose: and agreeably to the superstition of the times, it is said that this event was looked upon as a bad presage for the King, at the commencement of the civil wars. It is acknowledged by Mr. Noble, that he gives the story as only the report of the Town; but he observes, that thus far is certain, that Hinchinbrooke, as being near to Huntingdon, was generally one of the resting places of any of the Royal Family when going to, or returning from the North of England, either into, or from Scotland. It is more certain, adds Mr. Noble, that Oliver averred, that he saw a gigantic figure which came and opened the curtains of his bed, and told him that he should be the greatest person in the kingdom. If it be true that Oliver often mentioned this vision when he was in the height of his glory, it is undoubtedly a proof of the warmth of his imagination, and of his early ambition (325).

(325) *Ibid.* p. 94,
95.

Very different accounts are given of the improvements which were made by Cromwell during the course of his education. According to Hume, when he was at College, his genius was little fitted for the calm and elegant occupations of learning, and consequently he made small proficiency in his studies; and Sir William Dugdale's character of him, during his residence at the University, is still more unfavourable. But the assertions of partial writers are to be admitted with caution. Though it is far from being impro-

bable that he was fonder of active amusements, than of literature, it is, nevertheless, certain, that, instead of totally neglecting his studies, his Tutor, by discovering the bent of his disposition, had address sufficient to persuade him to become a proficient in the Latin language. Mr. Waller assures us, that he had a good knowledge of the Greek and Roman histories: nor must it be forgotten, that he patronized men of science and learning. Dr. Manton says, that he had a very valuable and well-chosen library. From all these circumstances it may be collected, that he was not averse to literature, or without a competent share of it himself, if allowance be made for the short time he remained at College; his mother having found it expedient, upon his father's decease, to remove him from the University. Perhaps his extravagant turn might lead her to such a resolution. Be that as it may, it is a real fact that he always retained a regard for the University of Cambridge (326).

(326) *Ibid.* p. 95,
96.

During Cromwell's residence at Lincoln's Inn, and after his return home, very unfavourable accounts are given, by various writers, of his character and conduct. In London, instead of attending to Coke upon Littleton, and to law reports, his mind was engrossed by dissolute pleasures, and he was particularly addicted to gaming. When he came back to Huntingdon, he pursued his vicious courses, and, if his enemies are to be credited, in a manner that was extremely gross and illiberal. His rude and boisterous behaviour prevented his equals from conforing with him; and, therefore, he was obliged to take up with less creditable companions; who, if they did not adopt his sentiments, were sure to feel the weight of his arm, and to receive a severe discipline from his usual weapon, a quarter staff. This conduct, together with his forgetting to pay his reckoning, rendered him an unwelcome visitor, even to the publicans; by whom he was so dreaded, that when they saw him coming, they would say, "here comes young Cromwell, shut up your doors." If at any time they complained of hard usage, because their accounts were not settled, the satisfaction they received was that of having their windows broken (327).

(327) *Ibid.* p. 97,
98.

That there is some exaggeration in these narratives, can scarcely be doubted. But whatever may have been the case in this respect, it is certain that Oliver's career of extravagance did not continue long. Before he became of age, he began to feel a compunction for the crimes he had committed, and determined to correct his manners; nor was any doubt entertained of the reality of his reformation. When his marriage took place, he had but just completed his twenty-first year; and, if ever he had forfeited the esteem of his own townsmen, he recovered it so entirely, that, in 1625, he was returned one of the Members for the Borough of Huntingdon. This was in the first Parliament of Charles the First's reign. However, about this time, Cromwell took a step, which indicated, in a striking manner, the boldness of his disposition. His fortune being small, he endeavoured to repair it by procuring that the estate of his maternal uncle, Sir Thomas Stuart, should be annexed to his own, in the life-time of Sir Thomas. For this purpose, he represented him as a person not able to govern it, and by petition to his Majesty, applied for a Commission of Lunacy. The petition, upon being heard, was dismissed by the King as groundless. Sir Thomas Stuart, as might naturally be expected, was extremely offended with this transaction: nevertheless, in consequence of the intreaties of Oliver's mother, and Sir Oliver Cromwell, and through the good offices of some of the neighbouring clergy, he was induced to forgive the injury, and, in the end, as hath appeared in the article, left his estate to his nephew (328). It is highly probable, that, on such an occasion, Cromwell would exert all his arts of duplicity, tears, and the most solemn protestations of repentance.

(328) *Ibid.* p.
100.

One of the effects proceeding from the reformation of his manners, was his willingness to return such sums of money as he had won by gaming. Having accidentally met a Mr. Calton, who had formerly lost to him thirty pounds, he immediately repaid it, saying that he had obtained it in an unlawful way, and therefore could not, without sinning, detain it any longer.

longer. It is related, that when he resided in London, he had won some money from Mr. Robert Compton, a genteel youth, the son of a tradesman in the city. This having been procured by unfair play, Oliver determined to make restitution, which happened to be done at a very convenient season: for the messenger sent by him found Mr. Compton at an ordinary, surrounded by Bailiffs, who wanted to arrest him for a debt of twenty pounds. But, by this happy supply, he was not only enabled to discharge the debt, but carried away with him a hundred pounds more. How far this story is founded in fact, cannot now, perhaps, be absolutely ascertained. It occurs in a manuscript book that was written by a Dr. Hutton (328).

(328) Noble's
Memoirs, ubi
supra, p. 105,
106.

The subsequent conduct of Cromwell is related, at large, in the article of our predecessor; and, therefore, it is not necessary for us to expatiate on that subject. Indeed the public acts of Oliver form a most distinguished part of the general history of the times; and on this head we might refer to a great number of writers whose works have appeared since the first edition of the *Biographia Britannica*. Not to mention authors of smaller note; Guthrie, Carte, Hume, Smollett, and Mrs. Macaulay, may now be added to the Catalogue of Historians by whom the transactions of Cromwell are amply displayed. The facts, however, must always be the same, though diversified by the different sentiments and reflections of the writers. Amongst other publications, the *Parliamentary History* is, perhaps, the work of the greatest consequence. It excels, as from its title and design might be expected, in giving a full relation of every thing that was transacted by Oliver's Parliaments, and in stating his whole conduct with regard to those assemblies. Very considerable light is also thrown on other parts of his political life. To enter into a detail of whatever occurs with respect to him in the *Parliamentary History*, would evidently carry us beyond all the bounds of this note; and, therefore, we shall content ourselves with transcribing only one important passage, originally taken from Whitlocke, because it tends to discriminate Cromwell's character in a point that has often been misunderstood. It is well known that his speeches were frequently so obscure, confused, and embarrassed, that the meaning of them could with difficulty, if at all, be comprehended. But it is probable that, in these cases, he acted from the design of concealing his real purposes from the persons with whom he conversed. When it suited his views, he could express himself as clearly as any man. Of this we have a remarkable instance, in the dialogue which, in 1652, passed between him and Whitlocke, upon the grand question, whether any measures could be discovered for settling the distractions of the nation, but by the dissolution of Parliament and the restoration of the Monarchy; and how far it would be safe for Cromwell, in such a case, to take the Crown upon himself. This dialogue so fully illustrates the perspicuity of language he was capable of adopting, and is otherwise so important by the display of his character, that our readers, we are persuaded, will not object to its length. It shall be given, therefore, at large, in Whitlocke's own words.

"Cromwell. My Lord Whitlocke, I know your faithfulness and engagement in the same good cause with myself and the rest of our friends, and I know your ability in judgment, and your particular friendship and affection for me: indeed I am sufficiently satisfied in these things, and therefore I desire to advise with you in the main and most important affairs relating to our present condition.

"Whitlocke. Your Excellency hath known me long, and I think will say that you never knew any unfaithfulness or breach of trust by me; and for my particular affection to your person, your favours to me, and your public services, have deserved more than I can manifest: only there is, with your favour, a mistake in this one thing, touching my weak judgment, which is incapable to do any considerable service for yourself or this Commonwealth: yet, to the utmost of my power, I shall be ready to serve you, and that with all diligence and faithfulness.

"Cromwell. I have cause to be, and am, without

the least scruple of your faithfulness, and I know your kindness to me your old friend, and your abilities to serve the Commonwealth, and there are enough besides me that can testify it: and I believe our engagements for this Commonwealth have been, and are, as deep as most men's; and there never was more need of advice, and solid hearty counsel, than the present state of our affairs doth require.

"Whitlocke. I suppose no man will mention his particular engagement in this cause, at the same time when your Excellency's engagement is remembered: yet to my capacity, and in my station, few men have engaged further than I have done; and that (besides the goodness of your own nature and personal knowledge of me) will keep you from any jealousy of my faithfulness.

"Cromwell. I wish there were no more ground of suspicion of others, than of you. I can trust you with my life, and the most secret matters relating to our business; and to that end I have now desired a little private discourse with you; and really, my Lord, there is very great cause for us to consider the dangerous condition we are all in, and how to make good our station, to improve the mercies and successes which God hath given us; and not to be fooled out of them again, nor to be broken in pieces, by our particular jarrings and animosities one against another; but to unite our counsels, and hands and hearts, to make good what we have so dearly bought, with so much hazard, blood, and Treasure; and that, the Lord having given us an intire conquest over our enemies, we should not now hazard all again by our private janglings, and bring those mischiefs upon ourselves, which our enemies could never do.

"Whitlocke. My Lord, I look upon our present danger as greater than ever it was in the field, and (as your Excellency truly observes) our proneness to destroy ourselves, when our enemies could not do it. It is no strange thing for a gallant army, as yours is, after full conquest of their enemies, to grow into factions and ambitious designs; and it is a wonder to me that they are not in high mutinies, their spirits being active, and few thinking their services to be duly rewarded; and the emulation of the officers breaking out daily more and more, in this time of their vacancy from their employment. Besides, the private soldiers, it may be feared, will, in this time of their idleness, grow into disorder; and it is your excellent conduct which, under God, hath kept them so long in discipline, and free from mutinies.

"Cromwell. I have used, and shall use, the utmost of my poor endeavours to keep them all in order and obedience.

"Whitlocke. Your Excellency hath done it hitherto even to admiration.

"Cromwell. Truly God hath blessed me in it exceedingly, and I hope will do so still. Your Lordship hath observed most truly the inclinations of the officers of the army to particular factions, and to murmurings that they are not rewarded according to their deserts; that others, who have adventured least, have gained most; and they have neither profit, nor preferment, nor place in government, which others hold, who have undergone no hardships nor hazards for the Commonwealth; and herein they have too much of truth: yet their insolency is very great, and their influence upon the private soldiers works them to the like discontents and murmurings.

Then as for the Members of Parliament, the army begins to have a strange distaste against them, and I wish there were not too much cause for it: and really their pride, and ambition, and self-seeking, ingrossing all places of honour and profit to themselves and their friends, and their daily breaking forth into new and violent parties and factions; their delays of business, and designs to perpetuate themselves, and to continue the power in their own hands; their meddling in private matters between party and party, contrary to the institution of parliaments, and their injustice and partiality in those matters, and the scandalous lives of some of the chief of them; these things, my Lord, do give too much ground for people to open their mouths against them, and to dislike them. Nor can they be kept within the bounds of justice, law, or reason; they themselves being the supreme

supreme power of the nation, liable to no account to any, nor to be controuled or regulated by any other power, there being none superior, or co-ordinate with them: so that, unless there be some authority and power so full and so high as to restrain and keep things in better order, and that may be a check to these exorbitancies, it will be impossible, in human reason, to prevent our ruin.

" *Whitlocke*. I confess the danger we are in by these extravagancies and inordinate powers is more than I doubt is generally apprehended: yet as to that part of it which concerns the soldiery, your Excellency's power and commission is sufficient already to restrain and keep them in their due obedience; and, blessed be God, you have done it hitherto, and I doubt not but, by your wisdom, you will be able still to do it.

" As to the Members of Parliament, I confess the greatest difficulty lies there; your commission being from them, and they being acknowledged the supreme power of the nation, subject to no controuls, nor allowing any appeal from them: yet I am sure your Excellency will not look upon them as generally depraved. Too many of them are much to blame in those things you have mentioned, and many unfit things have passed among them; but I hope well of the major part of them, when great matters come to a decision.

" *Cromwell*. My Lord, there is little hopes of a good settlement to be made by them, really there is not; but a great deal of fear, that they will destroy again what the Lord hath done graciously for them and us: we all forget God, and God will forget us, and give us up to confusion; and these men will help it on, if they be suffered to proceed in their ways. Some course must be thought on to curb and restrain them, or we shall be ruined by them.

" *Whitlocke*. We ourselves have acknowledged them the supreme power, and taken our commissions and authority in the highest concerns from them; and how to restrain and curb them after this, it will be hard to find out a way for it.

" *Cromwell*. What if a man should take upon him to be King?

" *Whitlocke*. I think that remedy would be worse than the disease.

" *Cromwell*. Why do you think so?

" *Whitlocke*. As to your own person the title of King would be of no advantage, because you have the full kingly power in you already, concerning the militia, as you are General. As to the nomination of civil officers, those whom you think fittest are seldom refused; and although you have no negative vote in the passing of laws, yet what you dislike will not easily be carried; and the taxes are already settled, and in your power to dispose the money raised. And as to foreign affairs, though the ceremonial application be made to the Parliament, yet the expectation of good or bad success in it is from your excellency; and particular solicitations of foreign ministers are made to you only: so that I apprehend, indeed, less envy and danger, and pomp, but not less power, and real opportunities of doing good in your being General, than would be if you had assumed the title of King.

" *Cromwell*. I have heard some of your profession observe, that he who is actually King, whether by election or by descent, yet being once King, all acts done by him as King are as lawful and justifiable as by any King who hath the crown by inheritance from his forefathers: and that by an act of Parliament in Henry the Seventh's time, it is safer for those who act under a King, be his title what it will, than for those who act under any other power. And surely the power of a King is so great and high, and so universally understood and revered by the people of this nation, that the title of it might not only indemnify, in a great measure, those that act under it, but likewise be of great use and advantage in such times as these, to curb the insolences of those whom the present powers cannot controul, or at least are the persons themselves who are thus insolent.

" *Whitlocke*. I agree in the general what you are pleased to observe as to this title of King: but whether for your Excellency to take this title upon you, as things now are, will be for the good and

advantage either of yourself and friends, or of the Commonwealth, I do very much doubt; notwithstanding that act of Parliament, 11 Henry VII. which will be little regarded, or observed to us by our enemies, if they should come to get the upper hand of us.

" *Cromwell*. What do you apprehend would be the danger of taking this title?

" *Whitlocke*. The danger, I think, would be this: one of the main points of controversy betwixt us and our adversaries is, whether the Government of this nation shall be established in Monarchy, or in a Free State or Commonwealth; and most of our friends have engaged with us upon the hopes of having the Government settled in a Free State, and to effect that have undergone all their hazards and difficulties, they being persuaded, though I think much mistaken, that under the government of a Commonwealth they shall enjoy more liberty and right, both as to their spiritual and civil concerns, than they shall under Monarchy; the pressures and dislike whereof are so fresh in their memories and sufferings.

" Now if your Excellency should take upon you the title of King, this state of your cause will be thereby wholly determined, and monarchy established in your person; and the question will be no more whether our Government shall be by a Monarch, or by a Free State, but whether Cromwell or Stuart shall be our King and Monarch.

" And that question, wherein before so great parties of the nation were engaged, and which was universal, will by this means become, in effect, a private controversy only. Before it was national, what kind of government we should have: now it will become particular, who shall be our Governor, whether of the family of the Stuarts, or of the family of the Cromwells?

" Thus the state of our controversy being totally changed, all those who were for a Commonwealth (and they are a very great and considerable party) having their hopes therein frustrated, will desert you; your hands will be weakened, your interest straitened, and your cause in apparent danger to be ruined.

" *Cromwell*. I confess you speak reason in this: but what other thing can you propound that may obviate the present dangers and difficulties wherein we are all engaged?

" *Whitlocke*. It will be the greatest difficulty to find out such an expedient. I have had many things in my private thoughts upon this business, some of which perhaps are not fit, or safe, for me to communicate.

" *Cromwell*. I pray, my Lord, what are they? You may trust me with them; there shall no prejudice come to you by any private discourse betwixt us; I shall never betray my friend; you may be as free with me as with your own heart, and shall never suffer by it.

" *Whitlocke*. I make no scruple to put my life and fortune into your Excellency's hand; and so I shall, if I impart these fancies to you, which are weak, and perhaps may prove offensive to your Excellency; therefore my best way will be to smother them.

" *Cromwell*. Nay, I prithee, my Lord Whitlocke, let me know them. Be they what they will they cannot be offensive to me, but I shall take it kindly from you: therefore, I pray, do not conceal those thoughts of yours from your faithful friend.

" *Whitlocke*. Your Excellency honours me with a title far above me; and since you are pleased to command it, I shall discover to you my thoughts herein; and humbly desire you not to take in ill part what I shall say to you.

" *Cromwell*. Indeed I shall not; but I shall take it, as I said, very kindly from you.

" *Whitlocke*. Give me leave then, first, to consider your Excellency's condition. You are invironed with secret enemies: upon your subduing of the public enemy, the officers of your army account themselves all victors, and to have had an equal share in the conquest with you.

" The success which God hath given us hath not a little elated their minds; and many of them are busy and

and of turbulent spirits, and are not without their designs how they may dismount your Excellency, and some of themselves get up into the saddle; how they may bring you down, and set up themselves.

"They want not counsel and encouragement herein; it may be from some Members of the Parliament, who may be jealous of your power and greatness, lest you should grow too high for them, and in time overmaster them; and they will plot to bring you down first, or to clip your wings.

"*Cromwell*. I thank you that you so fully consider my condition; it is a testimony of your love to me, and care of me, and you have rightly considered it; and I may say without vanity, that in my condition yours is involved and all our friends; and those that plot my ruin will hardly bear your continuance in any condition worthy of you. Besides this, the cause itself may possibly receive some disadvantage by the strugglings and contentions among ourselves. But what, Sir, are your thoughts for prevention of those mischiefs that hang over our heads?

"*Whitlocke*. Pardon me, Sir, in the next place, a little to consider the condition of the King of Scots.

"This Prince being now by your valour, and the success which God hath given to the Parliament, and to the Army under your Command, reduced to a very low condition; both he and all about him cannot but be very inclinable to hearken to any terms, whereby their lost hopes may be revived of his being restored to the Crown, and they to their fortunes and native country.

"By a private Treaty with him you may secure yourself, and your friends and their fortunes; you may make yourself and your posterity as great and permanent, to all human probability, as ever any subject was, and provide for your friends. You may put such limits to Monarchical power, as will secure our spiritual and civil liberties, and you may secure the cause in which we are all engaged; and this may be effectually done, by having the power of the militia continued in yourself, and whom you shall agree upon after you.

"I propound, therefore, for your Excellency to send to the King of Scots, and to have a private treaty with him for this purpose; and I beseech you to pardon what I have said upon the occasion. It is out of my affection and service to your Excellency, and to all honest men; and I humbly pray you not to have any jealousy thereupon of my approved faithfulness to your Excellency and to this Commonwealth.

"*Cromwell*. I have not, I assure you, the least distrust of your faithfulness and friendship to me, and to the cause of this Commonwealth; and I think you have much reason for what you propound; but it is a matter of so high importance and difficulty, that it deserves more time of consideration and debate than is at present allowed us: we shall therefore take a further time to discourse of it (329)."

Another work, of some consideration, which has appeared since our Predecessor's article was written, is Dr. William Harris's "Historical and Critical Account of the Life of Oliver Cromwell." This work, which is drawn up with great industry, besides comprehending a variety of extracts from a number of authors, is enriched with an appendix of original papers. Among other things, it contains a number of Cromwell's Letters never before published, and which are produced as proofs of the sincerity of his religious dispositions and professions, at least, in the early part of his life. Dr. Harris, however, though more prejudiced in favour of Oliver than became such a zealous Advocate for Liberty, is obliged to record several instances of his shameful hypocrisy and dissimulation. One anecdote of this kind, related by Bishop Burnet, on the authority of Sir Harbottle Grimston, is so striking, that it deserves to be transcribed.

"When the House of Commons and the Army were quarrelling, at a meeting of the officers, it was proposed to purge the army better, that they might know whom to depend on. Cromwell upon that said, he was sure of the army; but there was another body that had more need of purging, naming the House of Commons, and he thought the army only could do

VOL. IV.

that. Two officers that were present brought an account of this to Grimston, who carried them with him to the Lobby of the House of Commons, they being resolved to justify it to the House. There was another debate then on foot: but Grimston diverted it, and said, he had a matter of privilege of the highest sort to lay before them: it was about the being and freedom of the house. So he charged Cromwell with the design of putting a force on the House: he had his witnesses at the door, and desired they might be examined: they were brought to the bar, and justified all that they had said to him, and gave a full relation of all that had passed at their meetings. When they withdrew, Cromwell fell down on his knees, and made a solemn prayer to God, attesting his innocence, and his zeal for the service of the House: he submitted himself to the Providence of God, who it seems thought fit to exercise him with calumny and slander, but he committed his cause to him: this he did with great vehemence, and with many tears. After this strange and bold preamble he made so long a speech, justifying both himself and the rest of the officers, except a few that seemed inclined to return back to Egypt, that he wearied out the House, and wrought so much on his party, that what the witnesses had said was so little believed, that had it been moved, Grimston thought that both he and they would have been sent to the Tower. But whether their guilt made them modest, or that they had no mind to have the matter much talked of, they let it fall: and there was no strength on the other side to carry it farther. To complete the scene, as soon as ever Cromwell got out of the House, he resolved to trust himself no more among them; but went to the Army, and in a few days he brought them up, and forced a great many from the House (330)."

Additions to the stock of letters written by Cromwell, have since been made in other publications. Particularly to recite them is needless. They will be found in Noble's Memoirs; in the letters that passed between Colonel Robert Hammond, Governor of the Isle of Wight, and the Committee of Lords and Commons at Derby-House; and the fourth volume of the Annual Register. All of them concur in giving some insight into the character and views of Oliver, with regard to the particular objects to which they relate. In the Gentleman's Magazine, for 1781, is a transcript of a valuable record, containing Cromwell's protection to divers English ships to trade to India and Persia. The original, which is on parchment, is beautifully illuminated, with the arms of England, Scotland, and Ireland, at the top. On one side is an excellent portrait of Oliver within the O; under which is a large ship, finely drawn, with the arms of England on the main-mast. This curious deed, which is dated on the twenty-ninth day of March, 1655, and displays Cromwell's attention to the promotion of Commerce, is in the collection of John Thorpe, Esq; of Bexley in Kent, and Fellow of the Society of Antiquaries (331).

"I have sometimes thought," says an ingenious correspondent, "that an agreeable history enough might be made of Cromwell without one word of truth in it, excepting a few public transactions, and all taken from historians." The truth of this remark has already been illustrated in note [B], with regard to the work of Gregorio Leti; and it might farther be confirmed with respect to Voltaire, who has fallen into many errors, in what he relates concerning Oliver. Indeed, this celebrated writer was far from being well informed in the affairs of England.

In the Richardsoniana, are two anecdotes concerning Cromwell, for the authenticity of which we have no other evidence than the book whence they are taken. The first is produced, by Mr. Richardson, as a proof of Oliver's greatness of mind, and justness of thinking; though expressed in a rude manner, suitable to the subject and to himself. On account of the vulgarity of the story, we have hesitated concerning the propriety of inserting it: but if it should be thought to reflect some honour on the character of the Protector, we shall obtain the pardon of, at least, a part of our readers. The story is as follows: "A zealous officer of his came to him, and told him he

supreme power of the nation, liable to no account to any, nor to be controuled or regulated by any other power, there being none superior, or co-ordinate with them: so that, unless there be some authority and power so full and so high as to restrain and keep things in better order, and that may be a check to these exorbitancies, it will be impossible, in human reason, to prevent our ruin.

"*Whitlocke*. I confess the danger we are in by these extravagancies and inordinate powers is more than I doubt is generally apprehended: yet as to that part of it which concerns the soldiery, your Excellency's power and commission is sufficient already to restrain and keep them in their due obedience; and, blessed be God, you have done it hitherto, and I doubt not but, by your wisdom, you will be able still to do it.

"As to the Members of Parliament, I confess the greatest difficulty lies there; your commission being from them, and they being acknowledged the supreme power of the nation, subject to no controuls, nor allowing any appeal from them: yet I am sure your Excellency will not look upon them as generally depraved. Too many of them are much to blame in those things you have mentioned, and many unfit things have passed among them; but I hope well of the major part of them, when great matters come to a decision.

"*Cromwell*. My Lord, there is little hopes of a good settlement to be made by them, really there is not; but a great deal of fear, that they will destroy again what the Lord hath done graciously for them and us: we all forget God, and God will forget us, and give us up to confusion; and these men will help it on, if they be suffered to proceed in their ways. Some course must be thought on to curb and restrain them, or we shall be ruined by them.

"*Whitlocke*. We ourselves have acknowledged them the supreme power, and taken our commissions and authority in the highest concerns from them; and how to restrain and curb them after this, it will be hard to find out a way for it.

"*Cromwell*. What if a man should take upon him to be King?

"*Whitlocke*. I think that remedy would be worse than the disease.

"*Cromwell*. Why do you think so?

"*Whitlocke*. As to your own person the title of King would be of no advantage, because you have the full kingly power in you already, concerning the militia, as you are General. As to the nomination of civil officers, those whom you think fittest are seldom refused; and although you have no negative vote in the passing of laws, yet what you dislike will not easily be carried; and the taxes are already settled, and in your power to dispose the money raised. And as to foreign affairs, though the ceremonial application be made to the Parliament, yet the expectation of good or bad success in it is from your excellency; and particular solicitations of foreign ministers are made to you only: so that I apprehend, indeed, less envy and danger, and pomp, but not less power, and real opportunities of doing good in your being General, than would be if you had assumed the title of King.

"*Cromwell*. I have heard some of your profession observe, that he who is actually King, whether by election or by descent, yet being once King, all acts done by him as King are as lawful and justifiable as by any King who hath the crown by inheritance from his forefathers: and that by an act of Parliament in Henry the Seventh's time, it is safer for those who act under a King, be his title what it will, than for those who act under any other power. And surely the power of a King is so great and high, and so universally understood and revered by the people of this nation, that the title of it might not only indemnify, in a great measure, those that act under it, but likewise be of great use and advantage in such times as these, to curb the insolencies of those whom the present powers cannot controul, or at least are the persons themselves who are thus insolent.

"*Whitlocke*. I agree in the general what you are pleased to observe as to this title of King: but whether for your Excellency to take this title upon you, as things now are, will be for the good and

advantage either of yourself and friends, or of the Commonwealth, I do very much doubt; notwithstanding that act of Parliament, 11 Henry VII. which will be little regarded, or observed to us by our enemies, if they should come to get the upper hand of us.

"*Cromwell*. What do you apprehend would be the danger of taking this title?

"*Whitlocke*. The danger, I think, would be this: one of the main points of controversy betwixt us and our adversaries is, whether the Government of this nation shall be established in Monarchy, or in a Free State or Commonwealth; and most of our friends have engaged with us upon the hopes of having the Government settled in a Free State, and to effect that have undergone all their hazards and difficulties, they being persuaded, though I think much mistaken, that under the government of a Commonwealth they shall enjoy more liberty and right, both as to their spiritual and civil concerns, than they shall under Monarchy; the pressures and dislike whereof are so fresh in their memories and sufferings.

"Now if your Excellency should take upon you the title of King, this state of your cause will be thereby wholly determined, and monarchy established in your person; and the question will be no more whether our Government shall be by a Monarch, or by a Free State, but whether Cromwell or Stuart shall be our King and Monarch.

"And that question, wherein before so great parties of the nation were engaged, and which was universal, will by this means become, in effect, a private controversy only. " *Cromwell*. What do you apprehend would be the danger of taking this title?

" *Whitlocke*. The danger, I think, would be this: one of the main points of controversy betwixt us and our adversaries is, whether the Government of this nation shall be established in Monarchy, or in a Free State or Commonwealth; and most of our friends have engaged with us upon the hopes of having the Government settled in a Free State, and to effect that have undergone all their hazards and difficulties, they being persuaded, though I think much mistaken, that under the government of a Commonwealth they shall enjoy more liberty and right, both as to their spiritual and civil concernments, than they shall under Monarchy; the pressures and dislike whereof are so fresh in their memories and sufferings.

" Now if your Excellency should take upon you the title of King, this state of your cause will be thereby wholly determined, and monarchy established in your person; and the question will be no more whether our Government shall be by a Monarch, or by a Free State, but whether Cromwell or Stuart shall be our King and Monarch.

" And that question, wherein before so great parties of the nation were engaged, and which was universal, will by this means become, in effect, a private controversy only. Before it was national, what kind of government we should have: now it will become particular, who shall be our Governor, whether of the family of the Stuarts, or of the family of the Cromwells?

" Thus the state of our controversy being totally changed, all those who were for a Commonwealth (and they are a very great and considerable party) having their hopes therein frustrated, will desert you; your hands will be weakened, your interest straitened, and your cause in apparent danger to be ruined.

" *Cromwell*. I confess you speak reason in this: but what other thing can you propound that may obviate the present dangers and difficulties wherein we are all engaged?

" *Whitlocke*. It will be the greatest difficulty to find out such an expedient. I have had many things in my private thoughts upon this business, some of which perhaps are not fit, or safe, for me to communicate.

" *Cromwell*. I pray, my Lord, what are they? You may trust me with them; there shall no prejudice come to you by any private discourse betwixt us; I shall never betray my friend; you may be as free with me as with your own heart, and shall never suffer by it.

" *Whitlocke*. I make no scruple to put my life and fortune into your Excellency's hand; and so I shall, if I impart these fancies to you, which are weak, and perhaps may prove offensive to your Excellency; therefore my best way will be to smother them.

" *Cromwell*. Nay, I prithee, my Lord Whitlocke, let me know them. Be they what they will they cannot be offensive to me, but I shall take it kindly from you: therefore, I pray, do not conceal those thoughts of yours from your faithful friend.

" *Whitlocke*. Your Excellency honours me with a title far above me; and since you are pleased to command it, I shall discover to you my thoughts herein; and humbly desire you not to take in ill part what I shall say to you.

" *Cromwell*. Indeed I shall not; but I shall take it, as I said, very kindly from you.

" *Whitlocke*. Give me leave then, first, to consider your Excellency's condition. You are invironed with secret enemies: upon your subduing of the public enemy, the officers of your army account themselves all victors, and to have had an equal share in the conquest with you.

" The success which God hath given us hath not a little elated their minds; and many of them are busy and

and of turbulent spirits, and are not without their designs how they may dismount your Excellency, and some of themselves get up into the saddle; how they may bring you down, and set up themselves.

"They want not counsel and encouragement herein; it may be from some Members of the Parliament, who may be jealous of your power and greatness, lest you should grow too high for them, and in time overmaster them; and they will plot to bring you down first, or to clip your wings.

"*Cromwell*. I thank you that you so fully consider my condition; it is a testimony of your love to me, and care of me, and you have rightly considered it; and I may say without vanity, that in my condition yours is involved and all our friends; and those that plot my ruin will hardly bear your continuance in any condition worthy of you. Besides this, the cause itself may possibly receive some disadvantage by the strugglings and contentions among ourselves. But what, Sir, are your thoughts for prevention of those mischiefs that hang over our heads?

"*Whitlocke*. Pardon me, Sir, in the next place, a little to consider the condition of the King of Scots.

"This Prince being now by your valour, and the success which God hath given to the Parliament, and to the Army under your Command, reduced to a very low condition; both he and all about him cannot but be very inclineable to hearken to any terms, whereby their lost hopes may be revived of his being restored to the Crown, and they to their fortunes and native country.

"By a private Treaty with him you may secure yourself, and your friends and their fortunes; you may make yourself and your posterity as great and permanent, to all human probability, as ever any subject was, and provide for your friends. You may put such limits to Monarchical power, as will secure our spiritual and civil liberties, and you may secure the cause in which we are all engaged; and this may be effectually done, by having the power of the militia continued in yourself, and whom you shall agree upon after you.

"I propound, therefore, for your Excellency to send to the King of Scots, and to have a private treaty with him for this purpose; and I beseech you to pardon what I have said upon the occasion. It is out of my affection and service to your Excellency, and to all honest men; and I humbly pray you not to have any jealousy thereupon of my approved faithfulness to your Excellency and to this Commonwealth.

"*Cromwell*. I have not, I assure you, the least distrust of your faithfulness and friendship to me, and to the cause of this Commonwealth; and I think you have much reason for what you propound; but it is a matter of so high importance and difficulty, that it deserves more time of consideration and debate than is at present allowed us: we shall therefore take a further time to discourse of it (329)."

Another work, of some consideration, which has appeared since our Predecessor's article was written, is Dr. William Harris's "Historical and Critical Account of the Life of Oliver Cromwell." This work, which is drawn up with great industry, besides comprehending a variety of extracts from a number of authors, is enriched with an appendix of original papers. Among other things, it contains a number of Cromwell's Letters never before published, and which are produced as proofs of the sincerity of his religious dispositions and professions, at least, in the early part of his life. Dr. Harris, however, though more prejudiced in favour of Oliver than became such a zealous Advocate for Liberty, is obliged to record several instances of his shameful hypocrisy and dissimulation. One anecdote of this kind, related by Bishop Burnet, on the authority of Sir Harbottle Grimston, is so striking, that it deserves to be transcribed.

"When the House of Commons and the Army were quarrelling, at a meeting of the officers, it was proposed to purge the army better, that they might know whom to depend on. Cromwell upon that said, he was sure of the army; but there was another body that had more need of purging, naming the House of Commons, and he thought the army only could do

VOL. IV.

that. Two officers that were present brought an account of this to Grimston, who carried them with him to the Lobby of the House of Commons, they being resolved to justify it to the House. There was another debate then on foot: but Grimston diverted it, and said, he had a matter of privilege of the highest sort to lay before them: it was about the being and freedom of the house. So he charged Cromwell with the design of putting a force on the House: he had his witnesses at the door, and desired they might be examined: they were brought to the bar, and justified all that they had said to him, and gave a full relation of all that had passed at their meetings. When they withdrew, Cromwell fell down on his knees, and made a solemn prayer to God, attesting his innocence, and his zeal for the service of the House: he submitted himself to the Providence of God, who it seems thought fit to exercise him with calumny and slander, but he committed his cause to him: this he did with great vehemence, and with many tears. After this strange and bold preamble he made so long a speech, justifying both himself and the rest of the officers, except a few that seemed inclined to return back to Egypt, that he wearied out the House, and wrought so much on his party, that what the witnesses had said was so little believed, that had it been moved, Grimston thought that both he and they would have been sent to the Tower. But whether their guilt made them modest, or that they had no mind to have the matter much talked of, they let it fall: and there was no strength on the other side to carry it farther. To complete the scene, as soon as ever Cromwell got out of the House, he resolved to trust himself no more among them; but went to the Army, and in a few days he brought them up, and forced a great many from the House (330)."

Additions to the stock of letters written by Cromwell, have since been made in other publications. Particularly to recite them is needless. They will be found in Noble's Memoirs; in the letters that passed between Colonel Robert Hammond, Governor of the Isle of Wight, and the Committee of Lords and Commons at Derby-House; and the fourth volume of the Annual Register. All of them concur in giving some insight into the character and views of Oliver, with regard to the particular objects to which they relate. In the Gentleman's Magazine, for 1781, is a transcript of a valuable record, containing Cromwell's protection to divers English ships to trade to India and Persia. The original, which is on parchment, is beautifully illuminated, with the arms of England, Scotland, and Ireland, at the top. On one side is an excellent portrait of Oliver within the O; under which is a large ship, finely drawn, with the arms of England on the main-mast. This curious deed, which is dated on the twenty-ninth day of March, 1655, and displays Cromwell's attention to the promotion of Commerce, is in the collection of John Thorpe, Esq; of Bexley in Kent, and Fellow of the Society of Antiquaries (331).

"I have sometimes thought," says an ingenious correspondent, "that an agreeable history enough might be made of Cromwell without one word of truth in it, excepting a few public transactions, and all taken from historians." The truth of this remark has already been illustrated in note [B], with regard to the work of Gregorio Leti; and it might farther be confirmed with respect to Voltaire, who has fallen into many errors, in what he relates concerning Oliver. Indeed, this celebrated writer was far from being well informed in the affairs of England.

In the Richardsoniana, are two anecdotes concerning Cromwell, for the authenticity of which we have no other evidence than the book whence they are taken. The first is produced, by Mr. Richardson, as a proof of Oliver's greatness of mind, and justness of thinking; though expressed in a rude manner, suitable to the subject and to himself. On account of the vulgarity of the story, we have hesitated concerning the propriety of inserting it: but if it should be thought to reflect some honour on the character of the Protector, we shall obtain the pardon of, at least, a part of our readers. The story is as follows: "A zealous officer of his came to him, and told him he

supreme power of the nation, liable to no account to any, nor to be controuled or regulated by any other power, there being none superior, or co-ordinate with them: so that, unless there be some authority and power so full and so high as to restrain and keep things in better order, and that may be a check to these exorbitancies, it will be impossible, in human reason, to prevent our ruin.

" *Whitlocke*. I confess the danger we are in by these extravagancies and inordinate powers is more than I doubt is generally apprehended: yet as to that part of it which concerns the soldiery, your Excellency's power and commission is sufficient already to restrain and keep them in their due obedience; and, blessed be God, you have done it hitherto, and I doubt not but, by your wisdom, you will be able still to do it.

" As to the Members of Parliament, I confess the greatest difficulty lies there; your commission being from them, and they being acknowledged the supreme power of the nation, subject to no controuls, nor allowing any appeal from them: yet I am sure your Excellency will not look upon them as generally depraved. Too many of them are much to blame in those things you have mentioned, and many unfit things have passed among them; but I hope well of the major part of them, when great matters come to a decision.

" *Cromwell*. My Lord, there is little hopes of a good settlement to be made by them, really there is not; but a great deal of fear, that they will destroy again what the Lord hath done graciously for them and us: we all forget God, and God will forget us, and give us up to confusion; and these men will help it on, if they be suffered to proceed in their ways. Some course must be thought on to curb and restrain them, or we shall be ruined by them.

" *Whitlocke*. We ourselves have acknowledged them the supreme power, and taken our commissions and authority in the highest concernments from them; and how to restrain and curb them after this, it will be hard to find out a way for it.

" *Cromwell*. What if a man should take upon him to be King?

" *Whitlocke*. I think that remedy would be worse than the disease.

" *Cromwell*. Why do you think so?

" *Whitlocke*. As to your own person the title of King would be of no advantage, because you have the full kingly power in you already, concerning the militia, as you are General. As to the nomination of civil officers, those whom you think fittest are seldom refused; and although you have no negative vote in the passing of laws, yet what you dislike will not easily be carried; and the taxes are already settled, and in your power to dispose the money raised. And as to foreign affairs, though the ceremonial application be made to the Parliament, yet the expectation of good or bad success in it is from your excellency; and particular solicitations of foreign ministers are made to you only: so that I apprehend, indeed, less envy and danger, and pomp, but not less power, and real opportunities of doing good in your being General, than would be if you had assumed the title of King.

" *Cromwell*. I have heard some of your profession observe, that he who is actually King, whether by election or by descent, yet being once King, all acts done by him as King are as lawful and justifiable as by any King who hath the crown by inheritance from his forefathers: and that by an act of Parliament in Henry the Seventh's time, it is safer for those who act under a King, be his title what it will, than for those who act under any other power. And surely the power of a King is so great and high, and so universally understood and revered by the people of this nation, that the title of it might not only indemnify, in a great measure, those that act under it, but likewise be of great use and advantage in such times as these, to curb the insolences of those whom the present powers cannot controul, or at least are the persons themselves who are thus insolent.

" *Whitlocke*. I agree in the general what you are pleased to observe as to this title of King: but whether for your Excellency to take this title upon you, as things now are, will be for the good and

advantage either of yourself and friends, or of the Commonwealth, I do very much doubt; notwithstanding that act of Parliament, 11 Henry VII. which will be little regarded, or observed to us by our enemies, if they should come to get the upper hand of us.

" *Cromwell*. What do you apprehend would be the danger of taking this title?

" *Whitlocke*. The danger, I think, would be this: one of the main points of controversy betwixt us and our adversaries is, whether the Government of this nation shall be established in Monarchy, or in a Free State or Commonwealth; and most of our friends have engaged with us upon the hopes of having the Government settled in a Free State, and to effect that have undergone all their hazards and difficulties, they being persuaded, though I think much mistaken, that under the government of a Commonwealth they shall enjoy more liberty and right, both as to their spiritual and civil concernments, than they shall under Monarchy; the pressures and dislike whereof are so fresh in their memories and sufferings.

" Now if your Excellency should take upon you the title of King, this state of your cause will be thereby wholly determined, and monarchy established in your person; and the question will be no more whether our Government shall be by a Monarch, or by a Free State, but whether Cromwell or Stuart shall be our King and Monarch.

" And that question, wherein before so great parties of the nation were engaged, and which was universal, will by this means become, in effect, a private controversy only. Before it was national, what kind of government we should have: now it will become particular, who shall be our Governor, whether of the family of the Stuarts, or of the family of the Cromwells?

" Thus the state of our controversy being totally changed, all those who were for a Commonwealth (and they are a very great and considerable party) having their hopes therein frustrated, will desert you; your hands will be weakened, your interest straitened, and your cause in apparent danger to be ruined.

" *Cromwell*. I confess you speak reason in this: but what other thing can you propound that may obviate the present dangers and difficulties wherein we are all engaged?

" *Whitlocke*. It will be the greatest difficulty to find out such an expedient. I have had many things in my private thoughts upon this business, some of which perhaps are not fit, or safe, for me to communicate.

" *Cromwell*. I pray, my Lord, what are they? You may trust me with them; there shall no prejudice come to you by any private discourse betwixt us; I shall never betray my friend; you may be as free with me as with your own heart, and shall never suffer by it.

" *Whitlocke*. I make no scruple to put my life and fortune into your Excellency's hand; and so I shall, if I impart these fancies to you, which are weak, and perhaps may prove offensive to your Excellency; therefore my best way will be to smother them.

" *Cromwell*. Nay, I prithee, my Lord Whitlocke, let me know them. Be they what they will they cannot be offensive to me, but I shall take it kindly from you: therefore, I pray, do not conceal those thoughts of yours from your faithful friend.

had fallen into bad company, where he had had the mortification to hear his Highness spoken of in a very scandalous manner. "Ay, says he, man, what did they say?" "I am ashamed, an't please your Highness, to repeat it." "Tell, tell," says Oliver. "Why, an't please your Highness, a rascal had the impudence to say, your Highness might kiss his a—." "How, how! what was he for a man?" "Oh! says the officer, he was but a poor beggarly fellow." "Oho! says the Protector, when you see him again, tell him, *he may kiss mine.*"

The other anecdote, though very awkwardly related, we shall give in Mr. Richardson's own words. "Lord Bolingbroke told us (June 12, 1742) that Lord Oxford had often told him, that he had seen, and had in his hand, a letter that King Charles the First wrote to the Queen in answer to one of hers that had been intercepted, and then forwarded to him; wherein she reproached him for "having made those villains too great concessions" (viz. that Cromwell should be Lord Lieutenant of Ireland for life, without account; that that kingdom should be in the hands of the party with an army there kept, which should know no head but the Lieutenant; that Cromwell should have a Garter, &c.) that in this letter of the King's, it was said, that she should leave him to manage, who was better informed of all circumstances than she could be; but that she might be entirely easy as to whatever concessions he should make them; for that he should know in due time, how to deal with the rogues, who, instead of a filken Garter, should be fitted with an hempen cord." So the letter ended; which answer, as they waited for, so they intercepted accordingly, and it determined his fate. This letter Lord Oxford said he had offered 500l. for. Lord Bolingbroke, Lord Marchmont, and Mr. P——e, all believed that a story I had heard or read to this purpose (and which occasioned Lord Bolingbroke's telling the above) had its origin no higher than this story of Lord Oxford (332)."

(332) Richardsoniana, p. 129*. 132*, 133*.

Mr. Gilpin, in his elegant and entertaining observations on picturesque beauty, has given a story which, in point of cruelty, reflects a deep disgrace on Oliver's conduct. "In the time of the civil wars, the owner of this Mansion [Norton Conyers, near Rippon in Yorkshire] "was Sir Richard Graham, of whom we "heard an anecdote in the family, which is worth "relating; as it is not only curious in itself, but "throws a very strong, but dark shade on the character of Cromwell. When the affairs of Charles the First were in the wane in all the southern counties, the Marquis of Newcastle's prudence gave them some credit in the North. His residence was at York, where he engaged two of the "Gentlemen of the country to act under him as "Lieutenants. Sir Richard Graham was one; whose commission under the Marquis is still in the hands of the family. As Sir Richard was both an active man, and much attached to the Royal cause, he entered into it with all that vigour, which ability, inspired by inclination, could exert; and did the King more effectual service, than perhaps any private Gentleman in those parts. On that fatal day, when the precipitancy of Prince Rupert, in opposition to the sage advice of the Marquis, led the King's forces out of York against Cromwell, who waited for them on Marsden Moor, Sir Richard Graham had a principal command, and no man did more than he, to end an action with success, which had been undertaken with temerity. When the day was irretrievably lost, and nothing remained, but for every man to seek the best means of security that offered, Sir Richard fled, with twenty-six bleeding wounds upon him, to his house at Norton Conyers, about fifteen miles from the field. Here he arrived in the evening, and being spent with loss of blood, and fatigue, he was carried into his chamber; where, taking the last farewell of his disconsolate Lady, he expired. Cromwell, who had ever expressed a peculiar inveteracy against this Gentleman, and thought a victory only half obtained, if he escaped, pursued his flight in person, with a troop of horse. When he arrived at Norton, his gallant enemy was dead; having scarce lived an hour after he was carried into

his chamber: and Cromwell found his wretched "Lady weeping over the mangled corpse of her husband, yet scarce cold. Such a sight, one "would have imagined, might have given him—not indeed an emotion of pity—but a satiety of revenge. The inhuman miscreant still feeling the vengeance of his soul unsatisfied; and turning "round to his troopers, who had stalked with him "into the sacred recesses of sorrow, he gave the sign of havoc; and in a few moments the whole house "was torn in pieces. Not even the bed was spared, "on which the mangled body was extended; and "every thing was destroyed, which the hand of rapine could not carry off (333)."

Were scepticism to put its finger on this narrative, perhaps it would suggest, that traditional stories gather strength and circumstance from time; that history is silent with regard to Sir Richard Graham's having had a principal command at the battle of Marston Moor; that he could not arrive at Norton-Conyers in the evening, since it was not till seven o'clock in the evening that the battle commenced, which lasted three hours; that the account of his having twenty-six bleeding wounds upon him has a romantic aspect; that it is difficult to know why Cromwell should have always expressed a peculiar inveteracy to Sir Richard, because from their remoteness of situation, there could not well have been an ancient enmity between them; and that it is somewhat extraordinary that Oliver, who had been at the head of the left wing of the Parliamentary army, should quit all other duties, and engage in a pursuit of fifteen miles, for the sake of gratifying his revenge on a single Gentleman.

Among the instances which the Protector's Biographers have recorded of the encouragement given by him to the cause of literature, what he did with regard to Durham has been but slightly mentioned. In 1650, a Petition to Parliament, from several persons of fortune in that county, was delivered by the Grand Jury to the High Sheriff, praying, that the College and Houses of the Dean and Chapter, then empty and going to decay, might be employed for erecting a College, School, or Academy, for the benefit of the Northern counties, which were so far distant from the Universities; and that part of the lands of the said Dean and Chapter, near the city, might be applied by Trustees to pious uses. This Petition having been strongly recommended by Oliver, in a letter dated from Edinburgh, to William Lenthall, Esq; Speaker of the House of Commons, another application to the same purpose was made in 1651. These applications being referred to a Committee, to state the business, and to report their opinion concerning the desires of the county, the Committee accordingly reported, that they were of opinion, that the said houses were a fit place to erect a College or School for all the Sciences and Literature; and that it would be a pious and laudable work, and of great use to the Northern parts. There being now a prospect of success in the design, a warm and affectionate address upon the occasion, was presented, in 1653, from the principal Gentlemen of the county, to his Excellency the Lord General, and the rest of his Council of Officers. The business, however, was not effectually prosecuted till 1656. In that year, Cromwell and his Council issued an order for founding and endowing a College at Durham, out of the Church lands; and on the fifteenth of May, 1657, Letters Patent were granted for that purpose. By these letters it was ordained, that the College should consist of one Provost or Master, two Preachers or Senior Fellows, and twelve other Fellows; four of the said twelve Fellows to be Professors, four others to be Tutors, and other four of them to be Schoolmasters. There were also to be in the said College twenty-four Scholars and twelve Exhibitioners, and in the Free School belonging to it eighteen Scholars. Philip Hutton, M. A. was appointed to be the first Provost or Master; William Spinedge, and Joseph Hill, M. A. the two first Preachers, or Senior Fellows; and Thomas Vaughan, M. A. John Kisser, M. D. Robert Wood, M. A. Ezeriel Long, D. D. John Peachill, M. A. Leonard Waitel, Richard Russell, M. A. John Richel, Nathaniel Vincent, M. A. William Corker, John Doughty, M. A.

(333) Observations chiefly relative to picturesque Beauty, made in the Year 1772, on several Parts of England, particularly the Mountains and Lakes of Cumberland and Westmoreland, p. 199—201.

and William Sprigg, the first twelve other Fellows. Of these, Vaughan, Kisser, Wood and Peachil were constituted the four Professors; Tong, Russell, Richel and Doughty the four Tutors; and Vincent, Corker, Sprigge and Wastel the four Schoolmasters. It was farther ordained that these persons and their successors should stand and be incorporated and founded one body politic and corporate, to all intents and purposes; and that they should for ever hereafter be called by the name of the Master or Provost, Fellows and Scholars of the College of Durham, of the Foundation of Oliver Lord Protector of the Commonwealth of England, Scotland and Ireland and the Dominions thereunto belonging. Large grants were made to the institution; a Common Seal was allowed to it; and the Provost, Fellows, and Scholars were empowered to purchase, have, hold and enjoy by them and their successors, any lands, tenements and hereditaments, rents or revenues, not exceeding the yearly value of six thousand pounds. On the death of Oliver, the Provost and Fellows of the College presented an humble address to the Protector Richard, in which they compared his renowned Father to Augustus; and asserted, that there were happily conjoined in him the warlike Prowess of our fifth Henry, the Prudence of our seventh Henry, and the Piety of our sixth Edward. In him, they add, was fulfilled the ancient wish of the Romans at the Inauguration of their Emperors; *Sis Augusto felicior, sis Trajano melior*. At the same time, they recommend to Richard the new erection, which was left an Orphan scarcely bound up in its swaddling cloaths; and pray, that by the vital beams of his piteous aspect, it may be cherished and grow, till it bear much fruit, for the good and happiness of those parts of the land, in which it was planted by a hand which never miscarried in any of its humane and magnanimous achievements. This Orphan College, it is said, thrived apace. It endeavoured to confer degrees, and to mimic its grown upon sisters of Oxford and Cambridge. But these great and long established bodies checked so presumptuous a spirit, by Petitions to the young Protector, in which they assigned their reasons against a third University, and especially against any degrees being conferred there. In less than two years, the disjointed frame of Government, which had harassed the kingdom, was dissolved, and with it fell the new seminary of knowledge at Durham (334).

(335) Lord Egmont's, M. S. Biographical Collections.

Numerous are the characters of Oliver Cromwell, which have been given both by foreigners and natives. "There met in him, says the Bishop of Meaux, an incredible depth of judgment, a refined hypocrisy, an able policy, a capacity to venture yet conceal all things, a resolution to leave nothing to chance which he could prevent by counsel or force. On the contrary, he was so vigilant and ready in all things, that he never lost the opportunities which presented themselves. In a word, he was one of those restless and bold spirits who seem born to overturn the world (335)."

The celebrated Abbé Raynal in his History of the Parliament of England, has drawn the character of Oliver, and has added to it a parallel between him and Montrose. "Cromwell," the Abbé says, "was not one of those men who have appeared unworthy of Empire as soon as he arrived at it. He had a genius adapted to all places, all seasons, all business, all parties, all governments. He was always what he ought to be: at the head of an army, the bravest; in council, the wisest; in business, the most diligent; in debates, the most eloquent; in enterprizes, the most active; in devotion, the most fanatic; in misfortunes, the most firm; in an assembly of Divines, the most learned; in a conspiracy, the most factious. He never made any mistake, never let slip an opportunity, never left an advantage incomplete, never contented himself with being great, when he had it in his power to be very great. Chance and natural temper, which determine the conduct of other men, did not influence the most inconsiderable of his actions. Born with an absolute indifference to all that is praise-worthy or blameable, honest or dishonest; he never considered virtue as virtue, crimes

as crimes; he regarded only the relation which one or the other might have to his elevation. This was his idol: he sacrificed to it his King, his country, his religion; which he would have defended with the same zeal, had he had the same interest in protecting, as in destroying them. The system of his ambition was conducted with an art, an order, a boldness, a subtlety, and a firmness, of which I believe history can shew no example. All sects, all ranks, all nations; peace, war, negotiations, revolutions, miracles, prophecies; all advanced the fortune of this hypocritical Usurper. He was a man born to decide the fate of nations, empires, and ages. The splendour of his talents hath almost made the horror of his outrages to be forgotten: posterity at least will question, whether Oliver Cromwell deserved execration or admiration." This is a highly finished picture, rather than an exact likeness. The great qualities of Cromwell are exaggerated; and an Englishman will smile at Oliver's being represented as in debates the most eloquent, and in an assembly of Divines the most learned. Neither is it true that he sacrificed his religion to his elevation; for what religion he had was hostile to the episcopal form of Church Government.

The Abbé Raynal's comparison between Montrose and Cromwell is as follows: "These celebrated men fixed the eyes of all Europe upon them. Montrose had an integrity of heart, which always fixed him in the interest of his king and country; Cromwell a superiority of genius, which gave an air of equity to the most criminal actions. Vanity properly made the character of the first; ambition was the only ruling passion of the second. With the first, one had great hopes of conquering; with the second, one was sure not to be beaten. If the Crown could have been kept on Charles's head, it was by Montrose: if it must fall from it, it must be by Cromwell. The Republican was as much superior to the Royalist in depth of judgment, as he was inferior to him in goodness of heart. In a word, Cromwell was an illustrious villain, who cannot be praised without horror, nor despised without injustice; whom we are at once forced to admire and to detest (336)."

Several of our later English authors do not entertain so high an opinion of the Protector's abilities as has been done by some foreigners. "With respect to Cromwell, says the Monthly Reviewer, he was undoubtedly subtle, a perfect master of dissimulation, active, vigilant, and intrepid. But we cannot discover in him those refined marks, or that deep system of policy, which some writers attribute to his character. He seems rather to have been led by a train of accidents to the power he usurped, than guided to it by a series of design. His chief merit was the artifice he employed to raise himself to the sole command of the army. When he had gained that point, in a state quite unsettled, and where the Government was upon no legal foundation whatever, it was easy for a victorious Commander to change the sword for the sceptre. Nay, to an ambitious mind the transition was almost involuntary. But we are not persuaded that he planned his schemes from a foresight of events: we rather think that he was taught by the occasion as it offered. Thus much is certain, that his system of foreign politics was, in many respects, erroneous in its principles, and narrow in its foundation; and that he consulted how to gratify his own pride, by raising what he called the *honour* of the nation, while he neglected its interest (337)."

Mr. Hume, likewise, while he does justice to Oliver's talents, is far from viewing them in that transcendent point of light in which they have frequently been represented. His character of the Protector is as follows.

"It seems to me, that the occurrence of Cromwell's life, where his abilities are principally discovered, is his rising from a private station, in opposition to so many rivals, so much advanced before him, to a high command and authority in the army. His great courage, his signal military talents, his eminent dexterity and address, were all requisite for this important acquisition. Yet will not this promotion appear the effect of supernatural abilities, when we consider, that

Fairfax,

(336) Annual Register, vol. ix. p. 88, 89. Monthly Review, vol. v. p. 449, 450.

(337) Monthly Review, vol. xix. p. 274.

Fairfax, himself a private Gentleman, who had not the advantage of a seat in Parliament, had, through the same steps, attained even a superiour rank, and if endued with common capacity and penetration, had been able to retain it. To incite such an army to rebellion against the Parliament, required no uncommon art or industry: to have kept them in obedience, had been the more difficult enterprize. When the breach was once formed betwixt the military and civil powers, a supreme and absolute authority, from that moment, is devolved upon the General; and if he is afterwards pleased to employ artifice, or policy, it may be regarded, on most occasions, as great condescension, if not as a superfluous caution. That Cromwell was ever able really to blind, or over-reach, either the King or the Republicans, does not appear. As they possessed no means of resisting the force under his command, they were glad to temporize with him, and, by seeming to be deceived, wait for opportunities of freeing themselves from his dominion. If he seduced the military Fanatics, it is to be considered, that their interest and his evidently concurred, that their ignorance, and low education, exposed them to the grossest imposition, and that he himself was at bottom as frantic an Enthusiast as the worst of them; and, in order to obtain their confidence, needed but display those vulgar, and ridiculous habits, which he had early acquired, and on which he set so high a value. An army is so forcible, and, at the same time, so coarse a weapon, that any hand which wields it, may, without much dexterity, perform any operation, and attain any ascendant, in human society.

"The domestic administration of Cromwell, though it discovers great ability, was conducted without any plan of liberty or arbitrary power; perhaps, his difficult situation admitted of neither. His foreign enterprizes, though full of intrepidity, were pernicious to national interest, and seem more the result of impetuous fury, or narrow prejudices, than of cool foresight and deliberation. An eminent personage, however, he was in many respects, and even a superior genius; but unequal and irregular in his operations. And though not defective in any talent, except that of elocution, the abilities, which in him were most admirable, and which most contributed to his marvellous success, were the magnanimous resolution of his enterprizes, and his peculiar dexterity in discovering the characters, and practising on the weaknesses of mankind.

"If we survey the moral character of Cromwell, with that indulgence which is due to the blindness and infirmities of the human species, we shall not be inclined to load his memory with such violent reproaches, as those which his enemies usually throw upon it. Amidst the passion and prejudices of that time, that he should prefer the parliamentary to the royal cause, will not appear very extraordinary; since, even at present, many men of sense and knowledge, are disposed to think, that the question, with regard to the justice of the quarrel, may be regarded as very doubtful and ambiguous. The murder of the King, the most atrocious of all his actions, was to him covered under a mighty cloud of republican and fanatical illusions; and it is not impossible, that he might believe it, as many others did, the most meritorious action which he could perform. His subsequent usurpation was the effect of necessity, as well as of ambition; nor is it easy to see, how the various factions could at that time have been restrained, without a mixture of military and arbitrary authority. The private deportment of Cromwell, as a son, a husband, a father, a friend, is exposed to no considerable censure, if it does not rather merit praise. And, upon the whole, his character does not appear more extraordinary and unusual, by the mixture of so much absurdity with so much penetration, than by his tempering such violent ambition, and such enraged fanaticism, with so much regard to justice and humanity (338)."

(338) Hume's
Hist. of Eng.
vol. vii. p. 296.
—298. edit. of
1763.

Dr. Smollett's character of Cromwell, though short, is drawn up with ability and discernment.

"Oliver, says the Doctor, was of a robust make and constitution, and his aspect was manly, though clownish. His education extended no farther than a superficial knowledge of the Latin tongue, but he inherited

great talents from nature; though they were such as he could not have exerted to advantage at any other juncture than that of a civil war, inflamed by religious contests. His character was formed from an amazing conjunction of enthusiasm, hypocrisy, and ambition. He was possessed of courage and resolution that overlooked all danger, and saw no difficulty. He dived into the characters of mankind with wonderful sagacity; while he concealed his own purposes under the impenetrable shield of dissimulation. He reconciled the most atrocious crimes to the most rigid notions of religious obligation. From the severest exercise of devotion, he relaxed into the most ludicrous and idle buffoonery. He preserved the dignity and distance of his character, in the midst of the coarsest familiarity. He was cruel and tyrannical from policy, just and temperate from inclination: perplexed and despicable in his discourse; clear and consummate in his designs; ridiculous in his reveries; respectable in his conduct: in a word, the strangest compound of villainy and virtue, baseness and magnanimity, absurdity and good sense, that we find upon record in the annals of mankind (339)."

Mrs. Macaulay has exposed the views and conduct of Cromwell with all the severity and sagacity of a zealous, an impartial, and an enlightened Republican. She has entered deeply into his character, and is of opinion that to his fortune and success, more than to his ability, he is indebted for the eulogiums with which he has been loaded by the English Historians. Her review of his administration is clear and spirited, and the portrait she has drawn of him is executed with great energy of expression. We shall present it to our readers.

"The hyperbolical praises, she observes, bestowed by his partizans on the unhappy Charles, have been fully refuted by several pens; but the yet more exalted commendations lavished on his fortunate successor Cromwell, have, from an odd concurrence of circumstances, met with little contradiction. Did facts allow us to give credit to the exaggerations of panegyrists, the power and reputation which England acquired by the magnanimous government of the republican Parliament, entirely flowed from the unparalleled genius and virtue of the hero Cromwell: Cromwell imprinted throughout all Europe a terror of the English name: Cromwell was the conqueror of the Dutch: he retrieved the honour of his country in the business of Amboyna, and prescribed a peace to that insolent republic on his own terms: Cromwell was the scourge of the piratical States: the scourge of the House of Austria; every Court in Europe trembled at his nod; he was the Umpire of the North, the support of the Reformed Religion, and the friend and patron of that warlike Protestant Monarch the King of Sweden. In regard to his domestic government, Cromwell was ever ready to attend to complaints and redress grievances; Cromwell administered the public affairs with frugality; filled Westminster-hall with judges of learning and integrity; observed the strictest discipline in his army; was the support of religious liberty, and a benefactor to the learned: under the administration of Cromwell every branch of trade flourished: in his Court a face of religion was preserved, without the appearance of pomp, or needless magnificence: he was simple in his way of living, and easy and modest in his deportment.

"False as is this representation to the true character of the Usurper, it has been adopted by that party among us who call themselves Whigs, as a mortifying contrast to the principles, administration, and conduct of the Stewart line; and the Royalists of all denominations are well pleased to give to the government of an individual a reputation, which was alone due to the republic, and to conceal from the multitude the truth of facts, which must discover to vulgar observation that eternal opposition to the general good of society which exists in the one, with the contrary spirit which so evidently shone forth in the other. Historians, either from prejudice or want of attention, have in general given into these ill-founded encomiums so prodigally bestowed on the Usurper: but a just narration of the transactions of those times shews, that it was under the government of the Parliament the nation gained all its real advantages, and that the maritime

(339) Smollett's
Hist. of Eng.
vol. v. p. 327—
329. 3d edit.

maritime power they had raised and supported, with the skill and bravery of the Commanders they had placed over the naval force, was the sole means by which Cromwell supported the reputation of his Government.

“ Excepting the Dutch, whom the Parliament had totally subdued, with the Danes and Portuguese, whom they had brought to a state of humiliation, the Usurper found the English Commonwealth at peace with all the powers of Europe, and in the sole possession of the Spanish trade, a great source of national wealth. The Spaniards, who had paid great court to the Parliament, were equally warm in their professions to Cromwell, and would have entered into a close union with him on the easy terms of his remaining neuter during their contention with France. This was the plan pursued by the Parliament, and the obvious interest of England; but the Usurper sacrificing both the glory and the welfare of his country to the security of his own establishment, after having made a shameful peace with the Dutch, on terms lower than they had offered and the Parliament had refused, he, for the sake of procuring money to support his despotism, made war with Spain without previous declaration, whilst he was amusing them with the hopes of a treaty; entered into a league offensive and defensive with the French Court, on the reason of removing his rivals the Stewart family from so near a neighbourhood, and to please the English fanatics, his only fast friends, and pamper a vain-glorious appetite by the reputation of being the protector of the Protestant interest. Could he have brought the Dutch into his destructive measures, he would have assisted the Swedish monarch in acquiring a power which would have laid all Europe at the mercy of Sweden and France.

“ The domestic administration of the Usurper was a greater opposition to the liberty of his country, than his foreign transactions to her security and interest as a state. The models or rules of his government were of his own making; and though he changed them according to his pleasure or conveniency, he never abided by the directions of any. He ruled entirely by the sword, burthened the people with the maintenance of an army of thirty-thousand men, and more grossly violated their right to legislation by their representatives than had any other tyrant who had gone before him. The power he delegated to his Major-generals superseded the established laws of the country. He threatened the Judges, and dismissed them from their office when they refused to become the instruments of his arbitrary will; imprisoned Lawyers for pleading in a legal manner the cause of their clients; packed Juries; eluded the redress of Habeas Corpus; and kept John Lilbourn in confinement after an acquittance by the verdict of a Jury. In the point of religious liberty, the usurper, as it served his purposes, encouraged and oppressed all the different sectaries, not excepting the Papists; and if he was liberal to men of learning, it was with a view to make use of their talents for his own peculiar advantage. Some face of decency in his Court, and continuance of that familiarity to his inferiours by which he had effected his ambitious purposes, were absolutely necessary to the preservation of his power; but so far was he from preserving, or even affecting, that simplicity of appearance particularly useful in a supreme governor, that, when only in the character of General of the Army of the Commonwealth, he lived in a kind of regal state at Whitehall. By his parliamentary interest, he prevented the sale of the Royal Palaces, with a view to possess them when he had compassed his intended usurpation; and that he never appeared in public without an ostentatious parade and pomp, and lived in high state and magnificence, is confirmed by authentic records, with the testimony of all parties. On the dissolution of the Republican Government, there were five hundred thousand pounds in the public Treasury; the value of seven hundred thousand pounds in the magazines; the army was three or four months pay in advance; the maritime power was sufficiently strong to enable England to give law to all nations; and the trade of the country in so flourishing a condition that nine hundred thousand a year had been refused for the Customs and Ex-

VOL. IV.

cise. On the death of the Usurper, notwithstanding the money he had arbitrarily levied on the people, the aid afforded him by a convention of his own nomination which he termed a Parliament, the vast sums he had raised by decimating the cavaliers, the sums paid by the Dutch, the Portuguese, and the Duke of Tuscany, with the treasure he at different times had taken from the Spaniards, the state was left in debt, the army in arrears, and the fleet in decay! To these national evils was added the loss of a great part of the Spanish trade, with the foundation of that greatness in the French monarchy, which is to this day formidable to the liberty of England.

“ Such were the fruits of a Government carried on upon the principles of public good, and of that economy preserved by the Parliament; and such the mischief to society, when the lusts of an individual are to be supplied from the public stock, and the general good of the community sacrificed to particular interest. The aggrandizement of the French monarchy, to which Cromwell so essentially contributed, was no less fatal to the interest of the reformed; which he affected to protect, than opposite to the welfare and security of England. To sum up the villany of his conduct in a few lines—He deprived his country of a full and equal system of liberty, at the very instant of fruition; stopped the course of her power, in the midst of her victories; impeded the progress of reformation, by destroying her government and limiting the bounds of her empire; and, by a fatal concurrence of circumstances, was enabled to obstruct more good, and occasion more evil, than has been the lot of any other individual.

“ It is said that Cromwell was exemplary in the relative duties of a son, a husband, and a father; and the whole of his private conduct has been allowed by all parties to have been decent, though his mirth often degenerated into buffoonery, and the pleasures of his table bordered on licentiousness. If, as a citizen and magistrate, his character has been attacked by a few of the judicious, there are none who doubt the almost supernatural abilities of a man, who, from a private station, could attain to the summit of splendour and power. The accidental occurrences of life, so frequently favourable to fools and madmen, are never taken into the account of great fortune. Fairfax, though his understanding is allowed by all parties to have been weak, had he possessed a heart as corrupt as Cromwell's, might have taken the advantage his military command gave him, to tyrannize over a people unsettled in their government, ignorant of their true happiness, and divided both in their political and religious opinions. Fairfax, without abilities to be of eminent service to his country, was too honest to do it a real injury. The selfish Cromwell let no opportunity slip to turn to his particular advantage the victories gained on the side of liberty, and establish a personal interest on the ruins of the public cause. That he was active, eager, and acute; that he was a master in all the powers of grimace and the arts of hypocrisy, is obvious in every part of his conduct: but these qualities are no proof of extraordinary abilities: they are to be met with daily in common life, and never fail of success equal to their opportunities. The sagacity and judgment of Cromwell, in that point where his peculiar interest was immediately concerned, will appear very deficient, if we consider the sacrifice he made of those durable blessings which must have attended his person and posterity, from acting an honest part, in the establishing the Commonwealth on a just and permanent basis, and the obvious danger of those evils he incurred for the temporary gratification of reigning a few years at the expence of honour, conscience, and repose.

“ Cromwell, both by the male and the female line, was descended from families of good antiquity; and though it does not appear he was a proficient in any of the learned sciences, yet his father, notwithstanding his circumstances were narrow, was not sparing in the article of education. An elevated sense of religion, which took place in his mind after a licentious and prodigal course, recommended him to the reformers of the age, and was the cause of his promotion to a seat in Parliament; and the grimace of godliness, when the reality was extinguished by the

fumes of ambition, with his signal military talents, at length lifted him to the throne of empire. Notwithstanding that perfection in the science of war to which he attained, he was upwards of forty when he commenced soldier; a circumstance not to be forgotten, as it is the only splendid part of his character (340)."

(340) Macaulay's Hist. of Eng. vol. v. p. 191—208. Octavo edit.

Without stopping to enquire, whether Mrs. Macaulay's zeal for liberty, and admiration of the Republican Parliament, may not sometimes have led her to fix Cromwell's talents on too low a scale, we cannot but express our full conviction, that no rational and consistent friend to civil freedom can ever be an applauder of his conduct. The man, who, setting out in the cause of the people, could at length trample upon their rights, and erect himself into a tyrant, must justly be regarded with indignation and abhorrence. It is not in the power of some wise, splendid, and even laudable actions to wipe away the stains that adhere to such a character, and to prevent their being transmitted, in their true colours, to posterity. Tyranny is tyranny still, with whatever prudence it may occasionally be tempered, with whatever good qualities it may sometimes be accompanied.

We shall add two sketches of Cromwell drawn by Mr. Granger. "Oliver Cromwell united, in a very high degree, the characters of the Politician and the General; and occasionally assumed those of the Buffoon, and the Preacher. He broke forth from his obscurity, at an age when others think themselves doomed to it for ever; and when many begin to entertain thoughts of retiring from the world, he began to make the most conspicuous figure in it. He availed himself of the virtues and the vices, the talents and the weaknesses of mankind; and such obstacles as would have been insurmountable to an inferior genius, helped greatly to carry him on in his career (341)."

(341) Biographical Hist. of Eng. vol. ii. p. 251. 2d edit.

"This great man, says Mr. Granger in another part of his work, whose genius was awakened by the distractions of his country, was looked upon as one of the people, till he was upwards of forty years of age. He is an amazing instance of what ambition, heated by enthusiasm, restrained by judgment, disguised by hypocrisy, and aided by natural vigour of mind can do. He was never oppressed with the weight, or perplexed with the intricacy of affairs; but his deep penetration, indefatigable activity, and invincible resolution, seemed to render him a master of all events. He persuaded without eloquence; and exacted obedience, more from the terror of his name, than the rigour of his administration. He appeared as a powerful instrument in the hand of Providence, and dared to appeal to the decisions of Heaven for the justice of his cause. He knew every man in the three kingdoms, and endeavoured to avail himself of their respective talents. He has always been regarded by foreigners, and of late years by the generality of his countrymen, as the greatest man this nation ever produced. It has been disputed which he deserved most, a halberd or a crown; and there is no less disparity betwixt the characters drawn of him, and the reports propagated by his enemies and his friends. Colonel Lindsey affirmed, that he saw him enter into a formal contract with the devil; and Dawbeny has drawn a parallel betwixt Moses the man of God, and Oliver the Protector. The French Court went into mourning for him; but the famous Mademoiselle de Montpensier disdain- ed to pay that respect to the memory of an Usurper (342)."

(342) *Ibid.* vol. iii. p. 11, 12.

Mr. Granger has mentioned a slight circumstance with regard to Cromwell's person, which has escaped the notice of most of his Biographers. It is, that his nose was remarkably red and shining, on which account it was the subject of much ridicule. Cleveland in his character of a London Diurnal, humorously says, "This Cromwell should be a bird of prey by his bloody beak: his nose is able to try a young eagle, whether she be lawfully begotten; but all is not gold that glitters. Again, Cromwell's nose wears the dominical letter." The same Biographer has given the following anecdote from Dr. Hickes's Discourses on Dr. Burnet and Dr.

Tillotson. A Gentleman came to Oliver, to beg a lock of Charles's hair for an honourable Lady. "Ah! no Sir, said Cromwell bursting into tears, that must not be; for I swore to him when he was living, that not a hair of his head should perish (343)." The incongruity of this story might possibly not be too hard for the digestion of Dr. Hickes. On the subject of Oliver's being sometimes a preacher, Mr. Granger informs us, that there is a Sermon said to have been preached by him, on Rom. xiii. 1. the last Lord's day in April, 1649, at Sir P. T.'s house in Lincoln's-Inn-Fields. It was printed in 1680. There is no internal evidence of its being genuine; and as it abounds with low ribaldry and egregious nonsense, it was probably a fabrication to serve party purposes. Fictions of this kind have not been so uncommon as to be a matter of surprize.

(343) *Ibid.* p. 5; 9. 61.

Cromwell may not only be mentioned as having been, in some degree, an encourager of learning, but as having, likewise, been in some degree a patron of the arts. There are more original paintings of him than has generally been imagined; and they were done by the first Artists of the time, Cooper, Walker, Vandyke, and Sir Peter Lely. The engraved portraits of him are very numerous. A large Catalogue of them is given by Mr. Granger, and Mr. Noble has exhausted the subject, with regard both to the pictures and prints of Oliver (344). We shall select one or two circumstances, that are particularly curious. Ferdinand the Second, grand Duke of Florence, who, having felt the weight of the Protector's vengeance, not only courted his friendship, whilst living, but respected his memory when dead, ordered his Resident in London, to procure him the best original picture of Cromwell that could be obtained. Accordingly, the Resident applied to a Lady, a relation of the Protector's, who was possessed of a fine painting of him, by Walker. The Lady was unwilling to part with the picture; but, at the same time, not choosing to displease a sovereign Prince, she asked five hundred pounds for it, believing that such a sum would not be given. However, to her great surprize, the money was immediately paid; and the piece was sent to Florence, where it hangs in the old Palace, amongst the illustrious Generals. The present Bishop of Peterborough (Dr. Hinchcliffe) has acquainted Mr. Noble, that he thinks it to be an half-length, and in armour.

(344) Granger, *ubi supra*, vol. ii. p. 216. 251. vol. iii. p. 5—12. 72. Noble's Memoirs, vol. i. p. 123. 300—311.

Before the Resident had made this purchase, being sensible of the value his Master had for Oliver's character, and consequently how acceptable a good likeness of him would be, he is said to have bribed a person in the Palace, that had access to the Protector's corpse, to permit a model to be taken off, in Plaster of Paris, and that only a few minutes after his Highness's dissolution. A cast, wrought from this mould, and which is either of bronze, with a brass hue, or stained to give it that appearance, is now in the Florentine Gallery. Breval observes of it, that there is something more remarkably strong and expressive in it, than in any picture or bust of the Usurper which he had ever seen. Lord Corke, in his description of it, remarks, that it bears the strongest characteristics of boldness, steadiness, sense, penetration and pride; and, therefore, he disbelieves its having been done after Cromwell's decease. The muscles, his Lordship adds, are strong and lively, and the look is fierce and commanding; whereas death sinks the features, renders all the muscles languid, and flattens every nerve. Bishop Hinchcliffe concurs in opinion with Lord Corke. On the whole, Mr. Noble concludes it to be most probable, that the grand Duke asked, and obtained the bust from Oliver himself (345).

(345) Noble, *ubi supra*.

Simon, the Medallist, was patronized by Cromwell. His medals, coins, and seals, were chiefly engraved by that incomparable artist; who, in 1656, was appointed to the office of Principal Engraver and Medall-maker. Notwithstanding his decided superiority to every rival, Simon was neglected after the Restoration (346).

Strange stories have been told concerning the disposal of Oliver's body; some of which are mentioned in note [PP]. It is sufficient here to say, that the futility of all of them has been well exposed by Mr. Noble, who has clearly shewn that he was buried in Westminster.

(346) *Ibid.* Pinkerton's Essay on Medals, vol. ii. p. 143.

Westminster-Abbey. It need not be added, that, after the Restoration, his corpse was taken up, hanged at Tyburn, and the head fixed upon a pole, at the top of Westminster Hall (347).

(347) Noble's
Memoirs, *ubi*
supra, p. 288—
291.

It was not possible, that the wife of so celebrated a man, in such a violent collision of parties, should escape the shafts of calumny. Several aspersions were thrown upon her; but they appear to have been totally groundless. Mr. Granger has characterized her as a woman of an enlarged understanding, and an elevated spirit. "She was," he adds, "an excellent house wife, and as capable of descending to the kitchen with propriety, as she was of acting in her exalted station with dignity. It has been asserted, that she as deeply interested herself in steering the helm, as she had often done in turning the spit; and that she was as constant a spur to her husband in the career of his ambition, as she had been to her servants in their culinary employments. Certain it is, that she acted a much more prudent part as Protectress, than Henrietta did as Queen; and that she educated her children with as much ability as she governed her family with address. Such a woman would by a natural transition have filled a throne (348)."

(348) Granger,
ubi supra, vol. iii.
p. 13.

Mr. Granger's idea, that Mrs. Cromwell interfered greatly in the affairs of Government, does not appear to be well founded. She was, indeed, a woman of ability and spirit, notwithstanding which, she generally acted in conformity to the Protector's desire; and when she did exert herself, it was rather to bridle, than to stimulate his ambition. Ludlow acknowledges, that when Oliver removed from the cockpit to Whitehall, his wife seemed at first unwilling to go thither, though afterwards she became better satisfied with her grandeur. When her husband was at the very summit of his power, she earnestly wished for, and endeavoured to effect a reconciliation with the Royal Family. For this purpose, she listened eagerly to a proposal of Lady Dyfert (afterwards Duchess of Lauderdale) for restoring the exiled Monarch, and promised to break it to his Highness. Accordingly, she took an opportunity of doing it one morning before he rose; when, having represented the many

dangers he was exposed to from his situation, and the certain ruin that would befall his family at his decease, she desired him to accept the Carte Blanche the King was willing to grant. This, she urged, would not only obtain a pardon for all past offences, but secure to himself and his posterity honours little less than regal. The sole answer she received to her representation was, "You are a fool: Charles Stuart can never forgive me his father's death, nor the injustice he has suffered from me; and if he can, he is unworthy of the Crown." Only one letter of Mrs. Cromwell's has been preserved. It was written in 1650, and affords sufficient evidence of her affection for, and submission to her husband (349).

(349) Noble's
Memoirs, vol. i.
p. 124—131.
311, 312.

Great pains have been taken of late years to obtain every possible information concerning the family of Oliver Cromwell, and to trace his descendants down to the present time. The subject was, in part, begun by Mr. Duncombe, or rather by Mr. Luson, in the Appendix to the second Volume of Hughes's Letters; was carried on by Dr. Gibbons, at the end of his funeral Sermon for Mr. William Cromwell; and has still more minutely been pursued in one of the numbers of the Bibliotheca Topographica Britannica. But for the most complete and extensive intelligence, recourse must be had to Mr. Noble's Memoirs of the Protectoral House of Cromwell, to which we have already so frequently referred. In this work will be found not only whatever could well be collected concerning the posterity of the Protector, but an account of all the families to which the House of Cromwell was allied, as well as of the principal persons who were distinguished and employed by Oliver during his government. Of Mr. Noble's publication we shall make no farther use, at present, than to avail ourselves of its assistance in writing the two following articles of Richard and Henry Cromwell. It may here be observed, that the extraordinary character of Mrs. Bridget Bendysh, the granddaughter of the Protector, and daughter of Ireton, which makes so prominent a figure in Mr. Duncombe's collection, has not been forgotten by us, but will be properly noticed in another part of our work.] K.

* * [CROMWELL (RICHARD), son of Oliver, and for a short time, successor to his father, as Lord Protector of the Commonwealth of England, Scotland, and Ireland, and of the dominions and territories thereunto belonging, was born at Huntingdon, on the fourth of October, 1626, and baptized at St. John's Church in that town, on the nineteenth of the same month. It is probable that his uncle, Richard Cromwell, Esq; was one of his sponsors, and gave him his name, and certain that Mr. Henry Downtell, of St. John's College, in Cambridge, was another. His grammatical education, together with that of two of his brothers, was completed at Felsted, in Essex, whither he was sent, that he might be under the inspection of his maternal grandfather, Sir James Bouchier, who resided at that place. On the 27th of May, 1647, when he was far advanced in the twenty-first year of his age, he was admitted to the Society of Lincoln's Inn, where he did not distinguish himself by the closeness of his application, or his ardent prosecution of legal knowledge. His time was chiefly spent in the pursuits of pleasure; and it is remarkable, that, while the nation was torn to pieces by faction and civil war, he took no part in the contest; but led a life of privacy and inactivity. What is still more observable, whilst Oliver was fighting the battles of the Parliament, Richard Cromwell was the companion of the most loyal Cavaliers, and frequently drank success to the arms of the Sovereign whom his father was labouring to dethrone. When that unfortunate Monarch was condemned to death, Richard, it is said, was so struck with the horror of his approaching fate, that he threw himself upon his knees, and pleaded the cause of fallen majesty. But Oliver was not a man who could be diverted, by the entreaties and tears of his son, from executing the purpose he had formed (a).

(a) Noble's Memoirs of the Protectoral House of Cromwell, vol. i. p. 158, 159.

(b) *Ibid.* p. 319—323.
Harris's Life of Cromwell, p. 514—526.

Soon after the King's death, Richard Cromwell, in consequence of the eminence to which his family was now rising, obtained a very eligible marriage with Dorothy, the eldest daughter of Richard Maijor, of Hursley, in the county of Hants. The Negotiation for this alliance may be seen in some letters of Oliver's which have been given to the public, by Dr. Harris and Mr. Noble (b). Richard Cromwell had a very considerable fortune with his Lady; and after his marriage, retired to Hursley, where he resided for some years, and became entirely the country Gentleman; indulging himself in hunting, hawking, and the other rural sports of the age. Neither did he here forget his former principles of loyalty, but retained the same attachment to Charles the Second which he had borne to Charles the First, and used his best endeavours to serve such of the adherents to the royal family

family as fell into inconveniences on that account. During his retirement, he did not otherwise concern himself with public affairs, but spent his time in the company of his wife, to whom he was tenderly devoted, and in a hospitable mode of living, which exceeded the rules of frugality and prudence. Upon his father's advancement to the Protectorate, he was chosen to represent the counties of Monmouth and Southampton. This was in 1654; and on the eleventh of November, 1655, he was made first Lord of Trade and Navigation. In August, 1656, he was returned one of the county Members for Hants, as well as Representative for the University of Cambridge. The next year, he had a narrow escape from being crushed to death, by the giving way of the stairs of the Banqueting-House, when the Members of Parliament were going to pay their respects to Oliver. Some of his bones were broken by this accident; but having the advantage of youth and a good constitution in his favour, his health and strength were speedily restored (c).

(c) Noble's
Memoirs, *ubi*
supra, p. 159—
161.

The Protector having resigned the Chancellorship of the University of Oxford, on the third of July, 1657, that learned body manifested their regard for the family of his Highness, by choosing Richard for his successor. The choice was made on the eighteenth of the same month, and on the twenty-ninth following, he was installed in his new office at Whitehall. On this occasion, the ceremony was performed with great splendour; and next to the Chancellor, the most conspicuous person at the Installation was Dr. Wilkins, afterwards Bishop of Chester. At the same time, to do him still greater honour, Richard was created a Master of Arts, in a Convocation of Doctors and Masters of the University, assembled at the Palace for that purpose. One of his first acts, as Chancellor of Oxford, was to remove Dr. Owen from the Vice-chancellorship, and to appoint Dr. John Conant in his room. The next honours conferred upon Richard Cromwell, were his being sworn a Privy-Counsellor, and made a Colonel in the army. When Oliver formed the design of creating a House of Peers, he placed Richard at the head of this newly constituted body. The Protector had been obliged to be cautious, in thus bringing his son forward to public notice. From the fear of alarming the Republicans, he had pretended, for a while, that he had no thoughts of raising his sons above the rank of private Gentlemen. But when he was more solemnly inaugurated and confirmed in his Protectorship, he displayed other views; though he still concealed his wishes of transferring the sovereign power, in hereditary succession, to his family (d).

(d) *Ibid.* p. 161,
162.

It has generally been represented that Richard Cromwell was dissatisfied with his father's grandeur, and thought that it was not built upon a good foundation. It does not, however, appear that he expressed any degree of hesitation in accepting the Government of these kingdoms: nor, on the other hand, is there reason to believe that he looked forward to it with pleasure. It is certain that he felt a real concern on account of Oliver's last illness; and a letter which he wrote to an intimate friend on that occasion, while it manifests his disposition in this respect, shews that he was possessed of a sound understanding [A]. On the fourth of September, 1658, the day after his father's decease, he was proclaimed with great solemnity, and the form of the proclamation was as follows: "Whereas it hath pleased the most wise God, in his Providence, to take out of this world, the most serene and the most renowned Oliver, late Lord Protector of this Commonwealth; and his said Highness having, in his life-time, according to the humble petition and advice, declared and appointed the most noble and illustrious the Lord Richard, eldest son of his said Highness, to succeed him in the Government of these nations: We, therefore, of the Privy Council, together with the Lord Mayor, Aldermen, and the Citizens of London; the Officers of the Army, and numbers of other principal Gentlemen, do now hereby, with one full voice and consent of tongue and heart, publish and declare the said Noble and Illustrious Lord Richard to be rightfully Protector of this Commonwealth of England, Scotland, and Ireland, and the Dominions and Territories thereunto belonging;

[A] *Shews that he was possessed of a sound understanding.* The truth of what is asserted above will best appear from the letter itself, which was written from Whitehall, on the 28th of August, 1658, to Captain John Dunche, at Peusey, near Abingdon, in Berkshire.

"SIR,

"I intended to have written to you by the first return, but since his Highness has been so ill, that I have not had either opportunity or desire to set pen to paper; we have not been without very great fears; for his Highness's illness hath been such as hath put the Physicians to a nonplus. Our hopes are somewhat increased by this fit of an ague; and shall it please God to go on with his gentle hand, and bring him temperately out of this fit, and not renew it, at the time his former fit began, or visit us with a quartan, we shall have some reviving comfort, and cause to magnify his goodness; it being a new life to his Highness and the affairs as they now stand, of this

nation, with the Protestant interest of Christendom. I believe the rumours of this dangerous illness hath flown into all parts of this nation, and hath caused several persons of ill affections to prick up their ears, which will cause friends to be vigilant, for they will hope they have a game to play: it is a time that will discover all colours, and much of the disposition of the nation may now be gathered. I heard that those who have been enemies, others that have been no friends, some of both, are startled; fearing their possessions, and worse conditions, not considering their affection, in this hazard his Highness is in. It must be the goodness of God that shall save him, and his knowledge of the state of England and Christendom; the spirit of prayer which is poured out for him, and the faith which is acted on behalf of him, gives us the best comfort and hopes: mine and my wife's respects to your father and mother.

"I rest yours,

"R. CROMWELL (1)." (1) Parliamentary History, vol.

xxi. p. 223, 224;
"to note.

"to whom we do acknowledge all fidelity and constant obedience, according to law, and
 "the said humble petition and advice, with all hearty and humble affections; beseeching
 "the Lord, by whom Princes rule, to bless him with long life, and these nations with
 "peace and happiness under his government (e)."

Richard's accession to power was followed by every apparent testimony of attachment and affection. Lieutenant-General Fleetwood, in the name of the Officers of the Army of England; Monk, for those of Scotland; Sir Charles Coote, for Ireland; and Lockhart, from Dunkirk, all presented their congratulations to him, and their vows of fidelity. The same was done by Admiral Montagu, in behalf of the Navy. The zeal of the Citizens of London for his service, appeared more unanimous than it had been for that of his father; and most of the counties, cities, and towns in the three nations, testified, by addresses under their hands, their obedience to their new Sovereign. Nay, the spirit of addressing extended to the Plantations. The young Protector, in many of these solemn congratulations, was highly magnified for his wisdom, his nobleness of mind, and the lovely composition of his body. At the same time, the memory of Oliver was loaded with flattery. He was compared to Moses, Zerubbabel, Joshua, Gideon, and Elijah; to David, Solomon and Hezekiah; to Constantine the Great; and, in short, to every other person who had been celebrated, either in the sacred Scriptures or profane History, for their piety or their goodness, their wisdom or their valour. Of these addresses, one specimen shall be inserted below [B], which seems to have been a model for many of the others; and we have given it

(e) Parl. Hist.
 of Eng. vol. xxi.
 p. 223, 229.

[B] One specimen shall be inserted below.]

"To his Highness the Lord Protector of the Commonwealth of England, Scotland, and Ireland, and the Dominions and Territories thereunto belonging,

"The Humble Address of the Officers of your Highness's Armies in England, Scotland, and Ireland.

"May it please your Highness,

"WHEN we call to mind how God, the great and wise disposer of all things, hath, by a long continued series of Providence, carried on his work in these nations by the hands of several instruments, making it manifestly to prosper in the hands of all those that did heartily own his cause and people; but most remarkably and eminently, in the hands of that man whom he had chosen, your deceased father, whose memory shall be blest, and will be had in perpetual remembrance amongst good men; as having been the great assertor of the liberties of God's people, an instrument to restore these nations to peace, a lover of their civil rights, and so indefatigable in his endeavours after reformation; the mentioning of whom may well strike our hearts with unconceivable sorrow and abasement, to think that we, by our sins, have provoked the God of all our Mercies to give us such a stroke, by taking from us the delight of our eyes, and, under God, the Captain of his people, upon whom the eyes of foreign Princes were fixed with reverence and expectation.

"Oh! how gloriously did the Lord appear for and with him in the midst of his people, making the mountains to become a plain before him, and carrying him upon the wings of faith and prayer, above all difficulties and oppositions? How did the graces of God's spirit evidently shine forth in him? In his armies he reckoned the choicest saints his chiefest worthies; in his family, those that were near and dear to God, were near and dear to him. His eyes were upon the faithful in the land, to relieve many, to advance some, to protect and countenance all. In the things of God he had a tender and large heart, to love all the saints though of different judgments. He had great acquaintance with the Lord, mighty in faith and prayer, which made him so constant and glorious a victor.

"Your Highness, your armies, and people, reap the benefit of his prayers and successes; but, alas! this our *Moses* (your dear and blessed father) the servant of the Lord is dead, and shall we not weep? Though we weep not for him, yet we cannot but weep for ourselves. We cannot but look after him crying, *Our Father, our Father, the Chariots of Israel and the horsemen thereof.*

"When we consider these things, we cannot but reverence the same Providence, in bringing your

Highness to succeed him in the Government, with so much serenity and general consent and approbation of the people, when the enemy so strenuously endeavours to promote distractions and divisions; and we cannot but hope, though it hath pleased the Lord sharply to rebuke us, yet he will not cast us off, nor withdraw his fatherly affections from us; but, in our returnings, he will give us rest, and will enable your Highness to carry on that good old cause and interest of God and his people upon your heart continually, and then he will carry you as upon eagle's wings, above all the malice and wicked machinations of ungodly men, to do valiantly in Israel, in the further enlarging of the kingdom of Jesus Christ, in maintaining the Christian liberty of all sober godly men, though of different opinions in some things; the defending of the civil rights of the whole people of these nations; and the reformation of all abuses.

"And more particularly, that we may open our hearts before you, we hope and pray that God will enable your Highness to endeavour, that the army which shall be thought fit to be kept up in the three nations, may be continued, and kept under the command of such officers as are of honest and godly principles, free to adventure all, that is dear to them, by all lawful ways and means to maintain an equal and just liberty to all persons that profess godliness, that are not of turbulent spirits as to the peace of these nations, nor disturbers of others, though different in some things from themselves, according to the true intent of the humble petition and advice.

"That the vacancies in your Highness's Council, and other places of public trust, be, from time to time, supplied and filled up with men of known godliness and sober principles, that they, with your Highness and your armies, may make it their work to carry on the concerns of the godly in these nations, and the civil rights of the people thereof, upon their hearts, with full purpose to maintain the same; and that a work of reformation, tending to good life and manners, may be vigorously carried on by the hands of good Magistrates, and those things that are vexatious and oppressive to the people may be suppressed.

"That the provision made for the ejecting scandalous, ignorant, and insufficient Ministers, and that for the approbation of Ministers tending to the bringing in of godly and able Preachers into the several places of these nations (whereby poor and ignorant souls may be brought to the knowledge of the truth) may be owned and maintained in their power, according to the Acts of Parliament; and that any who shall discourage or discountenance good Ministers in these nations, by encouraging loose and profane persons to oppose and slight them for not admitting such as are loose and profane to the Sacrament, may be discountenanced and punished.

"In your prosecution whereof, we hope that God will assist us to make it known to your Highness, and

it the preference, as it affords a direct contrast to what was presented, a few months after, by the same body of men. It is said that this Address was drawn up at Court, and that copies of it were sent to the several regiments of the three nations, to be subscribed: nor is it improbable that this might be the case, when it is considered how nearly related Fleetwood, who had then the Chief Command of the English Army, was to the Protector. Henry Cromwell, Lord Lieutenant of Ireland, is, likewise, understood to have had no small hand in the scheme of procuring the presentation of a general Address from the three Armies; and his design in it was, to display the great unanimity of the soldiery in support of his brother's succession (f).

(f) *Ibid.* p. 232.
#36, 237.

The respect paid to Richard was not confined to his own subjects. Foreign Princes and States addressed their condolences to him, and sought a renewal of their alliances. M. de Bourdeaux, the Ambassador from France, distinguished himself above all others on this occasion. At an audience which he had of the Protector, and to which he was introduced by Sir Oliver Fleming, Master of the Ceremonies, he presented to his Highness two letters; one from the King of France, the other from his Eminency Cardinal Mazarine, as Chief Minister of State; and delivered himself, in a speech, to the following effect: "That his Master, the King of France, having heard of the death of his late Highness, of glorious memory, did very much take to heart the loss of so great a Captain, and so good an Ally of his Crown: that his Majesty rejoiced at being informed that, in order to the repairing of so great a loss, it had pleased God to establish his Highness, as his father's undoubted successor: that it was the desire of his most Christian Majesty, by all means, to maintain that alliance and amity, which had hitherto been of so great an advantage to both nations: and that his Majesty, to manifest the sincerity of his friendship, would be ready upon any occasion, either with his Counsels or Forces, to assist the Lord Protector against any of his enemies or opposers whatsoever." To this speech the Ambassador added, in his own behalf, "That as he himself had a great affection for the English nation, having now many years resided here, and a particular regard for the person of his late Highness the Lord Protector, to whom he always bore a profound reverence on account of his princely virtues; so he should at all times be ready to give his most noble son and successor a testimony how joyful he was to see his Highness thus happily established in the Government, and how desirous he was to render him every possible proof of his esteem and devotion (g)."

(g) *Ibid.* p. 237,
238.

For some time, the situation of Richard had every thing that was promising and prosperous in its external appearance. The voice of joy and of praise was heard from all parts; and perhaps this agreeable prospect might have continued much longer, had not the necessities of the State required the calling of a Parliament. By an alliance which Oliver, not long before his death, had made with the Crown of Sweden, and of which he was fonder than of all the rest of his engagements, he had stood obliged to send, in the Spring, a strong fleet into the Sound, to assist that King against Denmark; or, at least, to act so powerfully the part of a Mediator, as to induce the Danish Monarch to accept such conditions of peace as the other should be willing to propose. This could scarcely be done without parliamentary assistance; and therefore, the new Protector, by the advice of his Council, issued out writs about the middle of December, summoning a Parliament to meet on the twenty-seventh of January. Till that day, being nearly five months from his Accession to the Protectorship, he seemed to remain as great a Prince as ever his father had been before him. During the two last Parliaments of Oliver, no writs had been issued out to the meaner boroughs, but only to capital towns; and he had increased the number of Knights of Shires, in proportion to the assessments paid by each county to the public service. In consequence of this popular and equitable scheme, the House was filled with so great a number of independent Gentlemen, of the best families and estates in the kingdom, that he had no way of managing them, but by excluding, either by fraud or force, those who were the true friends of the Constitution. His son Richard, therefore, to avoid splitting upon the same rock, and not daring to rule without a Parliament,

all the world, that we aim not at any private interest or end of our own; but that we shall be heartily and faithfully with you, as we have been with your father, to adventure our lives and all that is dear unto us to stand by you. These being the principles upon which we engaged with your blessed father, and were blessed of God in, and we trust God will direct your heart to be fixed and bottomed upon the same principles, which we are persuaded God will own you in, and bless us in standing by you against all that shall oppose you therein, or make it their design to change or alter the present Government established in a single person and two Houses of Parliament, according to the humble petition and advice, or shall endeavour the subversion thereof, or the disturbance of the peace of these nations.

"And we are confident you will have the concurrent helps of the prayers and endeavours of the people of God, whereby your heart and hand will be strengthened to ride on prosperously, to the joy and rejoicing of all good men, and to the terror and disappointment of all your adversaries, when they shall perceive you inherit, not only your father's glory and authority, but also the hearts of his old faithful followers; and (which crowns all) the blessing of the God of your father; which that it may be continued unto you, and prosper you, in all that you put your hand unto, is and shall be the continual prayer of

Your Highness's most humble and loyal Servants.

resolved

(2) *Parl. Hist.*
vol. xxi. p. 233
—236.

resolved to call his upon the old model. Accordingly, only two Knights of the Shire were elected for each county; and all the petty boroughs were restored to their ancient usages and returns. This was done by the Protector under the pretence of ingratiating himself with the people; but the real design was to make way for his own creatures and dependents. As to the Members of the Upper House, they were all sufficiently attached to him by his father's or his own choice and election (b).

(b) *Ibid.* p. 245, 246.

On the twenty-seventh of January, 1658-9, the Parliament met, according to appointment, and Richard came to Westminster with the same state and solemnity that Oliver had done. The Commons assembled in their usual place; and the new Lords, who had also been summoned, by writ, to attend according to the humble Petition and advice, took their seats in the Upper House. In the last Parliament, the Commons had refused to acknowledge the authority of their Lordships; and this was one principal cause of their own dissolution. Something of the same spirit operated on the present occasion. When his Highness sent the Usher of the Black Rod to summon the Commons to attend him in the other House, it was only a small number that thought proper to obey the Call. Those, however, who did appear before him, heard a Speech from him much superior to their expectations [C], and which far exceeded that which followed from the Lord Commissioner Fiennes, the Keeper of the Great Seal (i).

(i) *Ibid.* p. 262 —265.

[C] *Heard a Speech from him much superior to their expectations.* This Speech, which reflects credit on the good sense of Richard, or his advisers, was as follows:

“ My Lords and Gentlemen,

“ I BELIEVE there are scarce any of you here, who expected, some months since, to have seen this great Assembly, at this time, in this place, in peace; considering the great and unexpected change which it hath pleased the all-disposing hand of God to make in the midst of us. I can assure you, that if things had been according to our own fears, and the hopes of our enemies, it had not been thus with us: and therefore it will become both you and me, in the first place, (as to reverence and adore the great God, Possessor of Heaven and Earth, in whose hands our breath is, and whose are all our ways, because of his judgments) so to acknowledge him in his goodness to these lands, in that he hath not added sorrow to sorrow, and made the period of his late Highness's life, and that of the nation's peace, to have been in one day.

“ Peace was one of the blessings of my father's Government: a mercy after so long a civil war, and in the midst of so great division which that war bred, is not usually afforded, by God, unto a people in so great a measure.

“ The cause of God, and these nations, which he was engaged in, met in all the parts of it, as you well know, with many enemies and great opposition. The Archers, privily and openly, sorely grieved him, and shot at him; yet his bow abode in strength, and the arms of his hands were made strong by the hands of the mighty God of Jacob.

“ As to himself; he died full of days, spent in great and fore travail: yet his eyes were not waxed dim, neither was his natural strength abated: as it was said of Moses, he was serviceable even to the last.

“ As to these nations; he left them in great honour abroad, and in full peace at home; all England, Scotland, and Ireland dwelling safely, every man under his vine, and under his fig-tree, from Dan even to Beerseba.

“ He is gone to rest, and we are entered into his labours; and if the Lord hath still a blessing for these lands, (as I trust he hath) as our peace hath been lengthened out to this day, so shall we go on to reap the fruit, and gather the harvest of what his late Highness hath sown, and laid the foundation of.

“ For my own part, being by the Providence of God and the disposition of the law, my father's successor, and bearing that place in the Government that I do, I thought it for the public good to call a Parliament of the three nations, now united, and conjoined together into one Commonwealth, under one Government.

“ It is agreeable not only to my trust, but to my principles, to govern these nations by the advice of

my two Houses of Parliament. I find it asserted in the humble petition and advice, (which is the cornerstone of this building, and that which I shall adhere to) *That Parliaments are the great Council of the Chief Magistrate, in whose advice both he and these nations may be most safe and happy.* I can assure you I have that esteem of them; and as I have made it the first act of my Government to call you together, so I shall further let you see the value I have of you, by the answers that I shall return to the advice that shall be given me by you, for the good of these nations.

“ You are come up from your several countries, as the heads of your tribes, and with hearts (I persuade myself) to consult together for their good. I can say I meet you with the same desires, having nothing in my design, but the maintenance of the peace, laws, liberties, both civil and christian of these nations; which I shall always make the measure and rule of my Government, and be ready to spend my life for.

“ We have summoned you up at this time to let you know the state of our affairs, and to have your advice in them: and I believe a Parliament was never summoned upon a more important occasion.

“ It is true, as I have told you, we are, through the goodness of God, at this time in peace; but it is not thus with us because we have no enemies: No, there are enough both within us and without us, who would soon put an end to our peace, were it in their power, or should it at any time come into their power.

“ It will be becoming your wisdom to consider of the securing of our peace against those, who, we all know, are, and ever will be, our implacable enemies: what the means of doing this are, I shall refer unto you.

“ This I can assure you, that the armies of England, Scotland, and Ireland, are true and faithful to the peace and good interest of these nations; and it will be found so, and that they are a consistent body, and useful for any good ends; and if they were not the best army in the world, you would have heard of many inconveniences, by reason of the great arrear of pay which is now due unto them, whereby some of them are reduced to great necessities: but you shall have a particular account of their arrears, and I doubt not but consideration will be had thereupon, in some speedy and effectual way. And this being matter of money, I recommend it particularly to the House of Commons.

“ You have, you know, a war with Spain, carried on by the advice of Parliament. He is an old enemy, and a potent one, and therefore it will be necessary, both for the honour and safety of these nations, that that war be vigorously prosecuted.

“ Furthermore, the constitution of affairs in all our neighbour countries, and round about us, (as well friends as enemies) is very considerable; and calls upon us to be upon our guard both at land and sea, and to be in a posture able to maintain and conserve our own state and interest.

“ Great

The first grand object that engaged the attention of Parliament, was a Bill, entitled, "An Act of Recognition of his Highness's Right and Title to be Protector and Chief Magistrate of the Commonwealth of England, Scotland and Ireland, and the Dominions and Territories thereunto belonging." This Bill was brought in, on the first of February, by Mr. Secretary Thurloe; and it was comprized in such terms as had no less a meaning in them than the admittance of Richard, and the persons then sitting in the other House, unto the full power, privileges and prerogative of the ancient Kings, and the ancient Peers of the Realm. It was the view of the Court party to carry the matter undiscovered; and they were the more encouraged in their hopes of success, as the Bill was read the first time without much difficulty. Accordingly, some of the long robe, who were devoted to the Protector, pressed for the reading of it again on the same day; their design in which was, that it should have been read a third time the next day, and thus immediately have passed into an Act. But though great pains had been taken to procure a Parliament which should support the measures of Richard and his Administration, it was impossible to prevent the principal leaders of the Republican party, and many of the zealous friends of Liberty, from being elected. These, therefore, contended, with equal justice and energy, that, according to the rule in such cases, the Bill ought to be referred to a grand Committee of the whole House. When this could not be obtained, they urged that the second reading of it ought, at least, to be put off for some days, and that liberty should be given to the Members to take copies, for the purpose of considering the business, and being better prepared for the debate. Thus far they succeeded, and the seventh of February was appointed for the second reading. When the House, at the time fixed upon, proceeded to the consideration of this grand point of Government, five whole days were spent in debating it, without coming to any conclusion; and on Monday the fourteenth, the Bill was not yet so far proceeded in, as to be referred to a Committee. However, on that day, the two following Resolutions were passed, as previous to the commitment of the Bill. The first was, "That it be part of this Bill to recognize and declare his Highness Richard Lord Protector, to be Lord Protector and Chief Magistrate of the Commonwealth of England, Scotland, and Ireland, and the Dominions and Territories thereunto belonging." It was resolved, secondly, "That, before this Bill be committed, this House do declare such additional clauses to be part of this Bill, as may bound the power of the Chief Magistrate, and fully secure the rights and privileges of the Parliament, and the liberties and rights of the people; and that neither this nor any other previous vote that is, or shall be, passed, in order to this Bill, is, or shall be, of force, or binding, unto the people, until the whole Bill be passed." So consonant was the last Resolution to the genuine sentiments of the Members, when under no improper bias, that it passed the House without any other negative than that of the Secretary. Nevertheless, when the courtiers understood, from the manner of Mr. Thurloe's voting, what the disposition was which prevailed at Whitehall, they manifested very little solicitude for effectually securing the freedom of the Constitution. In the course of the proceedings on the Recognition Bill, the Commons, after a debate that was carried on with great warmth for some days, came to two farther resolutions. These were, first, that it shall be part of this Bill to declare the Parliament to consist of two Houses; and secondly, that the bounds and power of the other House should be the first business taken into consideration. Accordingly, on the twenty-second of February, the subject was brought forward; and after a variety of warm debates, which sometimes lasted for a whole day together, it was at length resolved, on the twenty-eighth of March, that the House of Commons would transact business with the persons sitting in the other House, *as an House of Parliament*, during the present Parliament; and that it was not hereby intended to exclude such Peers, as have been faithful to the Parliament, from their

"Great and powerful fleets are preparing to be set forth into these seas, and considerable armies of several nations and kings are now disputing for the mastery of the *Sound*, with the adjacent islands and countries; among which is the Emperor of Germany, with other Popish States. I need not tell you of what consequence these things are to this State.

"We have already interposed in these affairs, in such manner as we found it necessary for the interest of England; and matters are yet in such a condition in those parts, that the State may, with the assistance of God, provide that their differences may not prejudice us.

"The other things that are to be said I shall refer to my Lord-Keeper Fiennes; and close up what I have to say, with only adding two or three particulars to what I have already said.

"And, first, I recommend to your care the people of God in these nations, with their concerns: the more they are divided among themselves, the greater prudence should be used to cement them.

"Secondly, The good and necessary work of reformation, both in manners and in the administration of justice, that profaneness may be discountenanced and suppressed, and that righteousness and justice may be executed in the land.

"Thirdly, I recommend unto you the Protestant cause abroad, which seems at this time to be in some danger, having great and powerful enemies, and very few friends; and I hope and believe that the old English zeal to that cause is still amongst us.

"Lastly, My Lords, and you Gentlemen of the House of Commons, That you will, in all your debates, maintain and conserve Love and Unity among yourselves, that therein you may be the Pattern of the nation, who have sent you up in peace, and with their prayers, that the spirit of wisdom and peace may be among you: and this shall also be my prayer for you; and to this let us all add our utmost endeavours for the making this an happy Parliament (3)."

privilege

(*) See his article in the present volume, p. 264*.

(/) Parl. Hist. vol. xxi. p. 281—297.

privilege of being duly summoned to be Members of that House. It was on this occasion that the long, severe, and able speech was delivered against the newly constituted Lords, which we have formerly mentioned as having been spoken by Sir Anthony Ashley Cooper, afterwards first Earl of Shaftesbury (*). Another Question which was agitated about the same time, was concerning the Members from Scotland and Ireland. Richard had summoned thirty Representatives from each of these two kingdoms, whose right to sit in the House was strongly objected to by the patriotic party. It was carried, however, without any extraordinary difficulty, though not without considerable debates, that the Members returned to serve for Scotland and Ireland should continue to sit and vote during the present parliament (/).

Whilst these and other matters were in agitation, the situation of the Protector became every day more and more critical and dangerous. The opposition to him in the Lower House was powerful and formidable; the Upper House was altogether insignificant and contemptible; and a spirit was rising against him in the Army. One strong proof of this spirit appeared in an Address which was presented to him, in the month of April, entitled, "The humble Representation and Petition" of the General Council of the Officers of the Armies of England, Scotland, and Ireland; in which, amongst a variety of complaints, they strongly insisted that their arrears should be satisfied. If the Parliament had immediately resolved to give effectual redress to the Petitioners with regard to the last point, perhaps Richard might have continued in power some time longer. But so wise a measure was not pursued. The House, on this occasion, endeavoured to support its consequence by vigorous resolutions. On the eighteenth of April, a question was proposed and put, "That, during the sitting of the Parliament, there shall be no General Council, or Meetings, of the Officers of the army, without the direction, leave, and authority, of his Highness the Lord Protector and both Houses of Parliament." The division being called for on this Question, it was carried in the affirmative, by a large majority of a hundred and sixty-three to eighty-seven. Another Resolution, which was agreed to without a division, was, "That no person shall have, or continue, any command or trust, in any of the armies or navies of England, Scotland, or Ireland, or any of the Dominions or Territories thereunto belonging, who shall refuse to subscribe, that he will not disturb, nor interrupt, the free meeting in Parliament of any of the Members of either House of Parliament, or the freedom in their Debates and Councils." It was farther resolved, "That the concurrence of the other House be desired to these votes." The Commons having thus asserted their own authority, and attempted to provide for the personal security of the Members, next voted, That they would take into consideration how the arrears of the armies and navies might be speedily satisfied. All these resolutions were ineffectual: The army was too formidable to be resisted; and the grand Council of its Officers, by consent of the Protector, had assembled at Wallingford House. In this exigence, Richard advised with his Privy Council, whether it was, or was not, proper to dissolve the Parliament. Most of the Counsellors gave their opinion in favour of its dissolution; but Whitelocke doubted the success of the measure, and wished that the Houses might be permitted to sit a little longer; especially as the Commons had begun to consider of raising money, by which they might soon engage the soldiery, and link them fast to their interest. The majority, however, persisting in a different sentiment, the Parliament was dissolved on the 22d of April, and this act may be regarded as the real determination of Richard's power. He retained, indeed, the name and the appearance of Protector for a few days longer, though without any authority; and his reign, if such it may be called, was finally ended, by the resolution of the Council of Officers to invite the surviving Members of the Long Parliament, who had continued sitting till the twentieth of April, 1653, to return to the exercise and discharge of their trust (m).

(m) Ibid. p. 340—369.

There were not wanting those who advised Richard to support himself in his dignity by sanguinary measures. They wished him to determine, without scruple, to cut off the men who aimed at depriving him of Sovereignty. But neither his moral principles nor his disposition would permit him to retain power at the expence of blood. There is a dialogue upon record, which is said to have passed, on this occasion, between Richard and Colonel Howard; and which is so curious, that it shall be inserted below [D]. At the

[D] And which is so curious, that it shall be inserted below.] The account is as follows: "When Colonel Howard perceived that nothing but vigorous measures could secure Richard in his Protectorate, from the treachery and ambition of Fleetwood and his other relations, the grandees of the army, he thus addressed him: "'Tis time to look about you; Empire and Command are now the question: your person, your life is in peril; you are the son of Cromwell, shew yourself worthy to be his son."

VOL. IV.

"This business requires a bold stroke, and must be supported by a good head. Do not suffer yourself to be daunted now, and my head shall answer for the consequence. Fleetwood, Lambert, Desborough, Vane, are the contrivers of all this: I will rid you of them; do you stand by me, and only back my zeal for your honour with your name. The necessity of preserving yourself, dispenses with the severe laws of justice. If this is not done, the army will be against you, and you are infallibly ruined."

6 U

the close of the dialogue it is subjoined, that it is just such a conference as we may suppose to have passed between King Henry the sixth and Queen Margaret. From whomsoever this remark proceeded, we are free to declare that it doth not meet with our approbation. There is a contempt of Richard implied in it, to which we think his conduct is not entitled, and which does not indicate the most exact moral discernment. Surely in the eye of true virtue, it must ever be judged laudable, rather to give up the gratifications of ambition, than to attain them by the perpetration of slaughter and murder. We are persuaded at the same time, that Richard's behaviour was as wise as it was just. If he had followed Colonel-Howard's advice, and had ventured to put to death men who stood in the nearest relation to his family, there is not the least probability that he could have secured to himself the permanency of Sovereign power. The bent of the times was against it; the late ill patched frame of Government was growing generally detestable; and people of all ranks, and of very different parties, began anxiously to look for a more settled state of things, in the restoration of the King. It has been thought, with no small appearance of reason, that if Oliver himself had lived much longer, he would not have been able, notwithstanding his extraordinary sagacity, and venturesome spirit, to have maintained his usurped greatness. Far less likely, therefore, was it that his son would have been capable of retaining the Sovereignty of this country, even though he had been wicked enough to have adopted the measures proposed by Colonel Howard.

There are but few occurrences, during Richard's Administration, that relate personally to himself. The principal one, is the danger he was exposed to by a fall from his horse, as he was taking his favourite diversion of hunting. Through excess of eagerness in the sport, he outrode his retinue; and his horse, either from restiveness, or leaping short, threw him into a ditch, from which he was extricated by a countryman before his guards could come up. This is said to have been the only time in which the good-humoured Sovereign was ever displeased with his attendants (n).

No sooner were the Republicans possessed of Government, than they sent to desire Richard to quit the Palace of Whitehall, as not thinking it safe that one who had been invested with Sovereignty should continue in the residence of the ancient Kings, and that too in the Metropolis. He was ordered, likewise, to surrender up his Great Seal, which he accordingly did on the fourteenth of May, when it was broken in pieces. At first he entertained thoughts of flying; but Fleetwood, whom he acquainted with his design, advised him to remain; assuring him that there was no intention of taking away his life, and that a fortune would be settled upon him adequate to his moderate wishes. This might occasion his continuing still at Whitehall, which displeasing the Parliament, the former order to leave it was renewed on the twenty-first of May; but to sweeten the message, the Lord-Chief-Justice St. John, and another Gentleman, were commissioned to promise, that, upon his compliance, provision should be made for the payment of his debts, and an honourable subsistence be procured for himself and family. Upon this he sent a submission in writing, declaring his free acquiescence in the change that had been made, and engaging to demean himself with all peaceableness under the present Government. His act of submission was accompanied with a schedule of his debts. The House being satisfied with this part of his conduct, agreed to the payment of his debts, upon condition that he should peaceably quit Whitehall, and dispose of himself as his private occasions required. To encourage him farther in so doing, they took him under their protection, and resolved that a Committee should be appointed to consider of the most eligible manner of settling upon him a comfortable and honourable subsistence. Richard stood at this time in need of being protected by Parliament, as he now felt all the inconveniences of the involved state of his affairs: for the creditors, to whom he was indebted on account of the pompous funeral of his father, became extremely clamorous; and one of them had the boldness to issue out a writ against him. Nay it has been asserted, that his Palace was surrounded with all the Bailiffs of Middlesex. As the House proceeded slowly in giving effect to the

well, vol. i. p.
164.

"ruined. And you have nothing to fear: I'll take it upon myself, and be answerable for the consequences."

To this Richard replied; "Every one shall see I will do no body any harm. I never have done any, nor ever will. I shall be very much troubled if any one is injured upon my account; and instead of taking away the life of the least person in the nation for the preservation of my greatness, which is a burden to me, I would not have a drop of blood spilt." "Do you think," replies the Colonel, "this moderation of your's will repay the wrong your family has committed by its elevation?" "Every body knows that, by violence, your father procured the death of the late King, and kept his sons in banishment. If the father's crimes cry for vengeance, shall the son have them passed over in silence? Mercy in the present state is unrea-

sonable. We may shed that blood that strives to shed our's, without being blood-thirsty, or cruel. Though conscience may sometimes obstruct a Sovereign's sacrificing an innocent person to his ambition, it does not oppose his executing a criminal for his own safety. Lay aside this pusillanimity so unbecoming the successor of Cromwell. Be quick, for every moment is precious. Consider your enemies spend this time in acting, which we waste in consulting." But, instead of rousing his resentment against his perfidious relations, he returned his thanks for the Colonel's zeal, and said, "talk no more of it, my resolution is fixed. Violent counsels suit not with me; and all you can persuade me to by what you now give, is, that it proceeds from true friendship, for which I am thankful (4)."

redress

redress and provision which had been voted in Richard Cromwell's favour, he still remained at Whitehall; and when, at length, he was obliged to leave it in consequence of a resolution that it should be cleared in six days of all persons whomsoever, excepting such as should be allowed by Parliament, he did not retire to his Seat at Hursley, but went to the Palace of Hampton Court, where he resided for some time. The alarm occasioned by this step was productive of consequences that might have been very advantageous to him, had not the subsequent changes prevented all farther transactions relative to him and his affairs (o).

(o) *Ibid.* p. 164
—168.

During the sitting of the Long Parliament, and through the frequent revolutions that followed, Richard continued totally inactive. Some, indeed, who had less to fear from his Restoration than from that of his Majesty, wished to see him Protector again. This is understood to have been especially the case with regard to Lambert, who is represented as having strongly solicited Colonel Ingoldsby to join with him in the business. But the Colonel was convinced that any such attempt was now too late; besides which, he had already made his peace with the King. On the meeting of the healing Parliament Richard Cromwell retired to Hursley; and, on the very day in which Charles the Second's return was voted, he resigned the Chancellorship of the University of Oxford. The resignation is expressed in terms which do honour to his understanding and his disposition. It was as follows:

“ For the Vice-Chancellor and Convention of the University of Oxford.

“ Gentlemen,

“ I shall always retain a hearty sense of my former obligations to you in your free election of me to the office of your Chancellor; and it is no small trouble to my thoughts, when I consider how little serviceable I have been to you in that relation. But since the All-wise Providence of God, (which I desire always to adore, and bow down unto) has been pleased to change my condition, that I am not in a capacity to answer the ends of the office, I thought I should not be faithful to you, if I did not resign it up into your hands, that you might have opportunity to choose some other person, who, in the present state of things, may be more fit and able to serve you. I do hereupon most freely resign and give up all my right and interest in that office; but shall always retain my affection and esteem for you, with my prayers for your continual prosperity; that, amidst the many examples of the instability and revolutions of human affairs, you may still abide flourishing and fruitful.

“ Gentlemen,

“ HURSLEY,
“ May 8, 1660.

“ Your affectionate friend and servant,

R. CROMWELL (p).”

(p) *Ibid.* p. 168,
169. 339.

As Richard was sensible how obnoxious he must be to a Monarch who was come home to take possession of the kingdoms which for so many years had been withheld from him, and the Sovereignty of which had been occupied by the Cromwells, he judged it prudent to retire to the Continent. It is remarkable that his name was not mentioned in either House of Parliament; and Lord Clarendon asserts, that he fled “ more for fear of his debts than of the King; who thought it not necessary to enquire after a man so long forgotten.” He transported himself to France, and, according to the same author, resided some years at Paris, “ untaken notice of, and indeed unknown, living in a most obscure condition and disguise, not owning his name, nor having above one servant to attend him.” When there happened to be a rumour and apprehension that a war was likely to fall out between England and France, Richard determined to quit that country, and to remove to some neutral place. The city he pitched upon was Geneva, to which he made his way by Bourdeaux, and through the Province of Languedoc. In the course of his journey he came to Pezenas, a very pleasant town belonging to the Prince of Conti, who had a handsome Palace there, at which he then resided, being at that time the Governor of the Province. “ In this place,” says Lord Clarendon, “ Richard made some stay, and walking abroad to entertain himself with a view of the situation, and the many things worth the seeing, he met with a person who well knew him, and was well known by him, the other having always been of his father's, and of his party; so that they were glad enough to find themselves together. The other told him, that all strangers who came to that town, used to wait upon the Prince of Conti, the Governor of the Province, who expected it, and always treated strangers, and particularly the English, with much civility: that he need not be known, but that he himself would first go to the Prince, and inform him, that another English Gentleman was passing through that town towards Italy, who would be glad to have the honour to kiss his hand. The Prince received him with great civility and grace, according to his natural custom, and, after a few words, began to discourse of the affairs of England, and asked many questions concerning the King, and whether all men were quiet, and submitted obediently to him; which the other answered briefly, according to the truth. “ Well,” said the Prince, “ Oliver, though he was a traitor and a villain, was a brave fellow, had great parts, great
“ courage,

(q) Clarendon's History of the Rebellion, and Civil Wars of England, vol. iii. Part 2nd, page 662, 663.

"courage, and was worthy to command; but that Richard, that coxcomb, *coquin*, *pot-tron*, was surely the basest fellow alive. What is become of that fool? How was it possible he could be such a sot?" He answered, that he was betrayed by those whom he most trusted, and who had been most obliged by his father;" so being weary of his visit, quickly took his leave, and the next morning left the town, out of fear that the Prince might know that he was the very fool and coxcomb he had mentioned so kindly. And within two days after, the Prince did come to know who it was whom he had treated so well, and whom before, by his behaviour, he had believed to be a man not very glad of the King's restoration (q)." This pleasant story has been taken notice of by several writers; and some have made remarks upon it that are favourable to Richard Cromwell. After what has been already said in his vindication, we shall only observe, that the Prince of Conti appears to have been a man who did not think that scruples should hinder any person from resolving to wade through blood and slaughter to a throne.

Richard did not continue long at Geneva. The alarm which occasioned his leaving France proving groundless, he returned to that country; where he resided (with the exception of another short interval spent at Geneva, and for the same reason) till about the year 1680. At this time, having overcome his pecuniary difficulties, and knowing the unpopularity of the Court, he ventured to return to England. The place which he fixed upon for his residence was Chesshunt in Hertfordshire, a village within twelve miles of London. Here he lived under the name of Richard Clark, Esq; and was little known, excepting by a few select friends. But though he courted privacy and retirement, he did not abstain from social intercourse; making occasional visits to his acquaintance, to the most intimate of whom he cautiously avoided speaking of his former elevation. Dr. Watts, who had frequently been in his company, used to say, that he never knew him glance at his former station above once, and that in a very distant manner (r).

It might have been expected that Richard had now weathered every storm, and that he would have descended to the grave in peace. This, however, was not the case. In 1705, he lost his only son, Oliver, who died on the eleventh of May, having never married. By this event Richard became entitled to a life estate in the Manor of Hursley, which, having been part of his wife's jointure, had devolved to Oliver, in right of his mother. In consequence of his son's decease, the old Gentleman sent his youngest daughter to take possession of the estate; which she accordingly did; but not, it seems, with a view of surrendering it to her father. She and her sisters, it is said, forgetting their duty, and even the dictates of humanity, refused to give it up to him; alledging that he was superannuated, and proposing to allow him a small yearly sum. This conduct was the more criminal, as he had ever been very fond of his children, and had treated them with the greatest tenderness and affection. The advanced age of Richard did not prevent him from behaving, on the present occasion, with a becoming spirit. He scorned to submit to the award of his daughters, and a process at law was the consequence. As he was obliged to appear in person in court, his sister, Lady Fauconberg, sent her coach and equipage, to conduct him thither. When he came, the judge, remembering his former elevation, conducted him into an apartment where refreshments were provided for him; and, on his being brought into court, ordered that he should be accommodated with a chair, and that he should sit covered. One of the Counsel on the other side seeming disposed to object to this indulgence, the liberal minded magistrate immediately replied, "I will allow of no reflections to be made, but that you go to the merits of the cause." In conclusion, a decree was given in favour of Richard, accompanied with some severe strictures on the shameful treatment he had received from his daughters. It is understood that the Judge was commended by Queen Anne, for the proper attention he had shewn to a man who had once been a Sovereign. The principal Counsellor retained by Richard was Thomas Pengelly, Esq; who, in the reign of George the First, became Chief Baron of the Exchequer. This Gentleman exerted himself with uncommon zeal in favour of his Client, and was much approved for his conduct in the affair. There was, at that time, a prevalent report, that he was the natural son of his employer. However this may have been; it is certain that a great friendship subsisted between Richard Cromwell and Mrs. Pengelly the mother of the Counsellor [E]. As the old Gentleman was going from Westminster Hall, his curiosity led him to visit the House of Peers. Being asked there, by a person, to whom he was a stranger, if he had ever heard or seen any thing like it before, he replied, "never since I sat in that Chair," pointing to the Throne (s).

(r) Noble's Memoirs, *ubi supra*, p. 172, 173.

(s) *Ibid.* p. 173 —175.

[E] It is certain that great friendship subsisted between Richard Cromwell and Mrs. Pengelly, the mother of the Counsellor.] The report of Sir Thomas Pengelly's having been the natural son of Richard, is confirmed by Lord Egmont, in his manuscript collections. It has been enquired who the Judge was that behaved with so much respect to the former protector. According to the Earl of Egmont and Mr. Hewling Luson, it was the Lord Chancellor Cowper.

Mr. Granger says, that it was the Lord Chief Justice Holt. The question depends upon the court in which the cause was tried. If the trial was at the King's Bench, Holt was the Judge; if in the Court of Chancery, it must have been Lord Cowper. Cowper presided in the Court of Chancery, from the 11th of October, 1705, to the 25th of September, 1710. We mention this circumstance, because it has been mistaken by Mr. Noble (5).

(5) Granger, vol. iii. p. 14. Hughes's Letters, vol. ii. App. p. 52, 53. Cowper's Article in this volume.

Richard

Richard Cromwell enjoyed a good state of health to the latest period of his life; and his activity was so great, that at fourscore, he would gallop his horse for several miles together. In his last illness, and just before his departure, he said to his daughters, "Live in love, I am going to the God of Love." His decease took place on the 12th of July, 1712, in the eighty sixth year of his age. It is somewhat uncertain whether Cheshunt or Theobalds was the place of his death; but the general account is, that he died at Cheshunt, at the House of Serjeant Pengelly. His remains were conducted with considerable funeral pomp, to Hursley, and deposited in the Chancel of that Church, near to those of his Lady. In his last will, which was made on the first of July, being no more than twelve days before his decease, he remembered several of his acquaintance; and, among the rest, he bequeathed to his good friend Mrs. Rachael Pengelly, "the little picture with the gold chain." His sister Mary, Countess of Fauconberg, was appointed his executrix. It is observable that his daughters are not named in the will. Perhaps he had but a small personal fortune, and he knew that they would succeed of course to the estate of Hursley, which was an ample patrimony. Had he possessed ever so much, their conduct gave them no title to be particularly distinguished (t).

Very unfavourable, and, in our opinion, very unjust accounts have been given, by the generality of writers, of Richard Cromwell's abilities. Such accounts seem to have originated, in a great measure, from a secret contempt which has been entertained of him because he would not support his illegal power by plunging into the deepest iniquity. That he had a good understanding we trust has already been sufficiently evinced: and though he cannot be said to have been of an enterprising temper, he could behave with spirit on proper occasions. When the army deserted him, excepting one troop of horse, seeing Whalley's regiment also filing off, he opened his breast, and desired them to put an end at once to his misfortunes and his life. At the time in which Fleetwood, Desborough, and others, endeavoured to persuade him to dissolve his Parliament, and even proceeded so far as to threaten him if he did not adopt that measure, he withstood all their arguments, menaces, and solicitations until the next morning, though he had no person near to support him in the contest, besides Secretary Thurloe. A pleasant magnanimity was displayed by him on his quitting Whitehall. Having given strict orders to his servants to be very careful of two old trunks which stood in his wardrobe, a friend, who was with him, asked him the reason of his particular solicitude about them. "Why," replied he, "they contain no less than the lives and fortunes of all the good people of England." The trunks were filled with the addresses which had been presented to him, from every part of the kingdom, on his accession to power, and in which the addressers promised to support him at the expence of all that was near and dear to them. These addresses he always carefully preserved [F]. The general practice of addressing commenced on Richard's succeeding to the Protectorate (u). It was unfortunate in its origin; but has been wide in its example. The extent to which it has since been carried, sometimes as an engine of policy, sometimes as the effervescence of public spirit, and sometimes as the effect of genuine loyalty, cannot be unknown to our readers.

Richard Cromwell was represented by the Republicans as a man of little religion; one cause of which was, his reply to an inferior officer, who had publicly murmured at the advancement of some Cavaliers, and was taken to Whitehall to answer the charge. "What," said the Protector, in a deriding manner, "would you have me prefer none but the godly? Here is Dick Ingoldsbey, who can neither pray nor preach; and yet I will trust him before you all." This, however, only implies that he was aware of the hypocrisy and cant of the times. In a letter which was written, in 1659, to John Winthorpe, Esq; Governor of Connecticut, in New England, he is described as a very worthy person indeed, of an engaging nature, and religious disposition, paying great respect to the best of men, ministers, and others. In the latter part of his life he attended divine worship regularly every Sunday. Mr. Neal, who says that Richard in his early years had not the zeal for religion, which was then fashionable, has testified that he was a man

[F] *These addresses be always preserved.* A curious anecdote on this subject was related to the late Rev. George North, Vicar of Codicote, near Welwyn, Herts, by two persons who conversed with Richard in the last years of his life, at Cheshunt. None were admitted to visit him, but such as had strong recommendations from some of his intimate acquaintance, as being men of an agreeable and cheerful conversation, and of strict honour. One of the two persons just mentioned, who lived at Ware, was recommended under this character, and introduced to him, with an admonition to conform to the old Gentleman's peculiarities, without asking any questions, or seeming to make observations. After an hour or two had been spent in conversation, and in drinking, Richard started up, took the candle, and was followed by the rest of the company, (who all,

excepting the last admitted man, knew what was going forward) carrying the bottle and the glasses into a dirty garret, where was nothing but a round hair trunk. This Mr. Cromwell pulled out to the middle of the room, and calling for a bumper of wine, drank prosperity to old England. The company did the same, when the new guest was called to do so, sitting astride on the trunk, as all of them had done. Richard desired him to sit light, as he had no less under him than the lives and fortunes of all the good people of England. The trunk was then opened, and the original addresses shewed him with great mirth and laughter. Such was Richard's method of initiating a new acquaintance (6). This anecdote was communicated to Mr. Noble by Dr. Lort, to whom several Biographers, and ourselves in particular, are so greatly indebted.

of great gravity and real piety. However, even in old age, he was so far from being an austere person, that he often gave way to innocent pleasantries. He possessed many amiable qualifications, and was much beloved by his friends, with some of whom he kept up a correspondence to his death. Mr. Howe, Mr. White, and Mr. Penn, were in the number of his correspondents. The first of these had been his domestic Chaplain; and when that Gentleman was upon his death-bed, Richard went to pay him a respectful visit, and to take a last farewell of him. It is said that tears were shed on both sides, and that the parting was very solemn. From various testimonies it appears, that Mr. Cromwell was highly esteemed in his neighbourhood; that there was no kind of blemish upon his character; that he was a perfect Gentleman in his behaviour; and was well acquainted with public affairs (*w*).

(*w*) Noble's
Mem. ubi supra,

Neal's Hist. of
the Puritans,
vol. iv. p. 260.

It is somewhat extraordinary that there is no coin or medal of Richard Cromwell. His Great Seal was cut by the inimitable Simon, and has been engraved by Vertue. Some pictures of him are in the possession of different persons; and there are several prints of him, executed by various hands. Concerning his wife Dorothy, very little is known. So far she has been happy, that amongst the illiberal things that have been levelled against the Protectoral House of Cromwell, her character is almost the only one that scandal has left untouched. It is thought she never saw her husband after he retired to France. She was married at Hursley, on the first of May, 1649; and died on the fifth of January, 1675-6, in the forty-ninth year of her age. The character given of her is, that "she was a prudent, godly, practical Christian (*x*)."] K.

Richard Crom-
well's children.

* * [CROMWELL (HENRY), the youngest surviving son of the Protector Oliver, and, for a short time, Lord Deputy and Lord Lieutenant of the kingdom of Ireland, was born at Huntingdon on the twentieth of January, 1627-28, and baptized at the Church of All Saints in that town, on the twenty-ninth of the same month. His education, together with that of his brothers, was finished at Felsted School, in the county of Essex. Being of a military disposition, his father placed him in the army of the Parliament at the age of sixteen; and, in 1647, when he had not completed his twentieth year, he had risen to be Captain of the General Sir Thomas Fairfax's Life Guard. In August, 1649, he accompanied Oliver into Ireland, to quell the Roman-catholic Rebellion, having, at that time, attained to the rank of a Colonel. Whilst he was in this service, he made an attack, in conjunction with Lord Broghill, upon the quarters of the enemy, in which a hundred and sixty of them were killed. At the same time, a hundred and twenty foot, with their officers, and a hundred and fifty gallant horse, were taken prisoners. This action took place in April, 1650; and in the following year Henry Cromwell assisted at the siege of Limerick. When the little, or Barebones Parliament, as it was called, assembled, in 1653, he was returned one of the representatives for the kingdom of Ireland. In the same year he was sent again into that Island, for the purpose of examining its condition, of discovering the temper of the people, and of reconciling them to the government of his father. This was a delicate and difficult task; but he performed it with admirable wisdom and discretion. The ruling powers, at that time, were the zealous Republicans. With regard to these men, Henry Cromwell found, or thought he found, that they had taken more care of themselves than of the people; and that they were so much in love with their power and places, that it would be improper to permit them any longer to retain important situations in the kingdom. Upon Ludlow, one of the most steady and determined amongst them, he could make no impression. That high spirited Gentleman preserved the consistency of his principles, and would not stoop to promise subjection to the government of a man whom he looked upon as an usurper, and a betrayer of the cause for which they had so long been fighting. The Protector, who was well acquainted with the jealous temper of the Republicans, and knew that they would be offended if his son affected state and grandeur in his manner of coming to Ireland, sent him without any other title than plain Henry Cromwell, and he was attended only by one servant. However, even the Common-wealth party thought proper to receive him with the greatest ceremony and respect. As he landed near Ludlow's country seat, that Commander sent his coach to conduct him thither; and here he was met by his brother-in-law Fleetwood, who, with several other persons of rank, came with their carriages, and conveyed him with due solemnity to Dublin. Such was Henry Cromwell's behaviour in this visit to Ireland, that he was highly valued by the people in general of that country; nor was the estimation he was held in confined to that kingdom, but extended to England. When, on his return, he arrived at Chester, many of the Gentlemen who had distinguished themselves in favour of Charles the First, waited upon him to testify their regard to his character; and, among the rest, a Colonel Mossion, who had been an officer in the King's army. In this interview, the Colonel having asked Henry how he left Ireland, he replied, "very well, only some who are in love with their power must be removed." Henry afterwards manifested his gratitude for the civilities he had repeatedly received from that Gentleman, by strongly, and we may suppose effectually interceding for his enlargement, when, in 1658, he was secured, together with some other

other Cavaliers, who had fought during the civil war, in his Majesty's service (a).

Soon after Henry Cromwell had returned to England, in 1653, he married a daughter of Sir Francis Russel, Bart. and for some time chiefly resided at Whitehall. Part of 1654 was spent by him at his father-in-law's seat, at Chippenham in Cambridgeshire; and in this year he was appointed one of the Visitors who were sent by the Protector to the University of Cambridge. In the same year he was chosen one of the Representatives in Parliament for that University. In 1655, he was again sent into Ireland, though with no other commission than that of Major General, to prevent the Governors of that kingdom, and Fleetwood in particular, from being disgusted. When he came to Chester, he remained there from the second of June to the twenty-third of the same month; and on that day he dispatched a letter to Thurloe, Secretary of State, acquainting him, that he had been treated, both by the country in his journey, and by the city where he then was, with a great deal of respect. From Chester he went to Holyhead, where he arrived on the fifth of July. Here he was much concerned to find that there were only two Ministers in the whole Island of Anglesea; and he requested that an order might be made to increase the number of clergy in that country. During some time which he spent in these western parts of the kingdom, he was constantly treated with every mark of esteem, and particularly by the Cavaliers. This did not appear a little criminal in the eyes of Ludlow, especially as Henry Cromwell was again entertained at Colonel Mossion's in North Wales, where the said Colonel drank the Protector's health. The same author was far from being pleased with the welcome reception which Henry met with on his return to Ireland. "Upon his arrival," says Ludlow, "in the Bay of Dublin, the men of war that accompanied him, and other ships in the harbour, rung such a peal with their cannon, as if some great good news had been coming to us; and though the usual place of landing for those who come in ships of war was near my house, yet he and his company went up in boats to the rings end, where they went ashore, and were met there by most of the officers, civil and military, about town (b)."

Great caution and secrecy were used by Henry Cromwell, for some time, to cover the real business on which he was sent; and it was at first thought that he only came over to command the army as Major-General, under Lieutenant-General Fleetwood. But by degrees his designs became more and more apparent. At length, when he found that it would be impossible any longer to curb the spirit of the Republicans, who were secretly supported by Fleetwood, he produced a commission by which he was constituted Lord-Deputy of Ireland, and Commander in Chief in that kingdom. However, to qualify what it was known would be distasteful to many persons, others were joined with him in the administration of civil affairs. But nothing could reconcile the minds of the officers of the army. As they had long been accustomed to oppress the natives, and to advance their own fortunes by the confiscation of the estates of the Irish, they were far from approving the government of one who was likely to put a stop to their excesses. Besides this, Henry did not view their political sentiments in the most favourable light. He wished, by moderation and condescension, to unite the whole kingdom, and to conciliate the affections of the different parties to each other. To frustrate, therefore, his designs, the officers had the boldness to petition the Protector to restore their old Chief Governor, Fleetwood, who coincided with them in their principles, and whose weak understanding they could easily render subservient to their projects. In this crisis Henry conducted himself with no small degree of prudence and address. The petition of the officers was counteracted by another of the opposite party in favour of the new Lord Deputy; and in a letter from the Church of Dublin, to Oliver, signed by many of the Ministers, an entire approbation is given of his son's conduct; for his equal justice; his mercy to the poor; his charity to all good men, though different in religious sentiments; and for the respect and reverence he shewed for religion. Indeed, Henry Cromwell, by the liberal and equitable spirit of his administration, by his impartiality and benevolence, soon reconciled the Irish to their Governor. Though the nation was depopulated and exhausted, and, at the same time, oppressed with assessments; though the military establishment could not be supported, and the partiality of Oliver to the officers who had espoused his cause, prevented any scheme of a reduction; though his grants to particular creatures impoverished the revenue; and though in consequence of the other urgent concerns of the Protector, the affairs of Ireland were sometimes totally neglected; amidst all these difficulties, Henry acted with so much skill and vigour for the public welfare, that the country was in a far more happy and prosperous condition than it had been for a long series of years. His father said, that his son was a Governor from whom he himself might learn. So firmly did the Lord Deputy establish his authority in the hearts of a people, who were ingenuous enough to acknowledge the merits of his administration, that they were entirely reconciled to the interests of Oliver. When a petition was sent to Oliver from the officers of his own regiment, avowing their dissatisfaction with his son's Government, addresses were transmitted from the army and the inhabitants of every county in Ireland, expressing their resolution of adhering to the Protector against all those whose particular animosities endeavoured to re-embroil the public. But notwithstanding these

flattering

flattering testimonies in Henry's favour, and the esteem which he, in general, acquired by his wife and zealous measures for the common benefit, he was surrounded with so many embarrassments, that his letters are full of complaints; and he declared his wish to Secretary Thurloe, that he might be permitted to lay down his office, and retire to a private life (c).

Leland's Hist. of Ireland, vol. iii. p. 401.

On the death of his father, with which event Henry appears to have been deeply affected, he took care to have his brother Richard's accession to the Protectorate proclaimed and acknowledged with all due solemnity in Ireland; and the same assurances of support were renewed to the new Sovereign, which had been given to Oliver. The satisfaction and joy in Ireland, upon the occasion, was as general and as great as they had been in England. There is no doubt but that Henry contributed principally to this; not only by his power as Governor, but by the influence arising from the popularity of his character. He was, indeed, very zealous for the interests of his brother, which he displayed, among other instances, in giving such advice to him and to Fleetwood, as reflects no small credit upon the soundness of his own understanding, and the goodness of his heart [A]. His Commission to the Government of Ireland was now renewed under the title of Lord-Lieutenant. However, it was an addition of honour only, and not of advantage, that was gained by this title. On the contrary, the new commission was so modified by the Privy Council, and contained so many restrictions and limitations, that Henry had much reason to be dissatisfied. When the Intelligence was brought of the dissolution of Richard's Parliament, and the intrigues at Wallingford-House, the Lord-Lieutenant exerted him-

[A] *As reflects no small credit upon the soundness of his understanding, and the goodness of his heart.* What is asserted above will be confirmed by two letters which have been preserved by Mr Neal, in his history of the Puritans; the first written to Richard, the second to Fleetwood. They are as follows:

"In his letter of October 20, 1658, he says, if the account be true which I have received of the state of affairs in England, I confess it is no more than I looked for; only I had some hopes it might have been prevented by keeping all officers at their respective charges; but as things now stand, I doubt the flood is so strong you can neither stem it, nor come to an anchor, but must be content to go adrift and expect the ebb. I thought those whom my father had raised from nothing would not so soon have forgot him, and endeavour to destroy his family before he is in his grave. Why do I say I thought, when I know ambition, and affectation of empire never had any bounds. I cannot think these men will ever rest till they are in the saddle; and we have of late years been so used to changes, that it will be but a nine day's wonder; and yet I fear there is no remedy, but what must be used gradually and *pedetentim*. Sometimes I think of a parliament, but am doubtful whether sober men will venture to embark themselves when things are in so high a distraction; or if they would, whether the army can be restrained from forcing elections.—I am almost afraid to come over to your highness, lest I should be kept there, and so your highness lose this army, which, for ought I know, is the only stay you have, though I cannot but earnestly desire it. I also think it dangerous to write freely to you, for I make no question but all the letters will be opened that pass between us, unless they come by a trusty messenger. I pray God help you, and bless your councils.

"I remain, yours, &c.

"H. C."

"Dear Brother,

"I received your account of the petition of the officers; but pray give me leave to expostulate with you; how came these two or three hundred officers together? If they came of their own heads, their being absent from their charge without license would have flown in their face when they petitioned for a due observance of martial discipline. If they were called together, were they not also taught what to say and do? If they were called, was it with his highness's privity? If they met without leave in so great a number, were they told their error? I shall not meddle with the matter of their petition; but, dear brother, I must tell you, I hear that dirt was thrown upon his late highness at that great meeting: that they were exhorted to stand up for that good old cause

which had long lain asleep. I thought my father had pursued it to the last. He died, praying for those that desired to trample on his dust. Let us then not render evil for good, and make his memory stink before he is under ground. Let us remember his last legacy, and for his sake render his successor considerable, and not make him vile, a thing of nought, and a by-word. Whither do these things tend? What a hurly-burly is there? One hundred independent ministers called together; a council, as you call it, of two or three hundred officers of a regiment. Remember what has always befallen imposing spirits. Will not the loins of an imposing independent, or anabaptist, be as heavy as the loins of an imposing prelate, or presbyter? And is it a dangerous opinion, that *dominion is founded in grace*, when it is held by the church of Rome, and a sound principle when it is held by the fifth monarchy men. Dear brother, let us not fall into the sins of other men, lest we partake of their plagues. Let it be so carried, that all the people of God, though under different forms; yea, even those whom you count without, may enjoy their birthright and civil liberty; and that no one party may tread upon the neck of another. It does not become the magistrate to descend into parties; but can the things you do tend to this end? Can these things be done, and the world not think his highness a knave or a fool, or oppressed with mutinous spirits? Dear brother, my spirit is sorely oppressed with the consideration of the miserable state of the innocent people of these nations: what have these sheep done that their blood should be the price of our lust and ambition? Let me beg you to remember, how his late highness loved you; how he honoured you with the highest trust, by leaving the sword in your hand, which must defend or destroy us. And his declaring his highness his successor, shews, that he left it there to preserve him and his reputation. O brother! use it to curb extravagant spirits, and busy-bodies, but let not the nations be governed by it. Let us take heed of arbitrary power; let us be governed by the known laws of the land; and let all things be kept in their proper channels; and let the army be so governed, that the world may never hear of them unless there be occasion to fight. And truly, brother, you must pardon me, if I say God and man may require this duty at your hand, and lay all miscarriages of the army, in point of discipline, at your doors. You see I deal freely and plainly with you, as becomes your friend, and a good subject. And the great God, in whose presence I speak, knows that I do it not to reproach you, but out of my tender affection and faithfulness to you. And you may rest assured, that you shall always find me,

"Your true friend, and loving brother,

"H. C. (1)."

(1) Neal's Hist. of the Puritans, Vol. iv. p. 212—214.

self with peculiar vigour to support the tottering power of his brother; and on the restoration of the Rump Parliament, he laboured to prevent the disorders which might arise from so sudden a revolution. A proclamation was issued by him to preserve the peace; and after a consultation with his officers, he sent agents to the Council of State in England, with proposals relative to the civil and military government of Ireland. These proposals being referred to the Parliament, some ordinances were made for the benefit of the adventurers and soldiers; and at the same time it was resolved, that the country should again be put into the hands of Commissioners; that Henry Cromwell should be recalled; and that Ludlow should be appointed to command the forces of the Commonwealth in that kingdom. Henry had already declared to Fleetwood, "that, although he could not promise so much affection to the late changes as others very honestly might, because he could not promote any thing which inferred a diminution of his late father's honour and merit, yet he had such a tenderness for peace as to be content with the present Government; and, therefore he thought it his duty to prevent those fears and jealousies which might give occasion to interrupt the public peace, by resigning his charge to any one whom they should send to receive it." The new Commissioners were either not acquainted with his sentiments, or suspected his sincerity. They were sensible, at the same time, of his abilities, his popularity, and his power in Ireland; and hence were led to imagine that he would retain his authority by force. Their fears in this respect were groundless: for when Sir Hardress Waller was employed to surprize the Castle of Dublin, he was admitted without the least opposition, and Henry Cromwell retired to a House in Phoenix Park. He had administered the government with so great a disregard to his private interest, that he could not immediately command as much money as would be sufficient to defray the expenses of his voyage to England. Indeed, such was the integrity of his disposition, that, in a letter to his brother, he could say, "I will rather submit to any sufferings with a good name, than be the greatest man upon earth without it (d)."

After Henry Cromwell had arrived in England, and waited on the Parliament, he retired into the country, where he continued without taking any part in the various succeeding revolutions. He probably thought himself happy in quitting a station, which, though elevated and splendid, had been exposed to so many difficulties that it never afforded him any satisfaction. It is understood, that he was far from being displeased with his Majesty's restoration. When that event happened, he was not only included in the Act of Indemnity, but appears to have received some mark of favour from the King, of which he expressed a very grateful sense, in a letter to the Lord Chancellor Clarendon, through whose interposition the benefit was obtained [B]. For some years Henry Cromwell resided with his father and brother-in-law, Sir Francis and Sir John Russel; after which he removed to his estate at Spinney Abbey, near Soham, in Cambridgeshire, a very retired situation. In the house belonging to this estate, which was worth between five and six hundred pounds a year, he spent the remainder of his days, descending from the toilsome grandeur of governing men, to the humble and happy occupation of husbandry. There is a tradition that he was once honoured with a visit from King Charles the Second, when his Majesty was returning from Newmarket [C].

The

[B] *Of which he expressed a very grateful sense, in a letter to the Lord Chancellor Clarendon, through whose interposition the benefit was obtained.* It may be acceptable to our readers to see a copy of the letter.

"May it please your lordship,

"When the declaration was framing, I did abhor to bee so unreasonable as to seeke any particular provision for myself in it; but when I saw myself secured by the multitude, and when his majesty by his special letters and promises declared, that though I had indeed escaped in the crowd, yet that hee had a particular mercy for mee; and when I saw hee could not be prevailed upon to unsettle others, who perhaps (abating my name) were greater offenders, I did then presume to insist upon that his mercy; nor could I believe (with some) that my soe doing was dishonorable unto his majesty. And your lordship (being above making an interest by trampling upon the fallen, or by being bitter against things that come to pass by God's secret providence) have most nobly and christianly patronized me in it, even to successe; and for this, in a few words. I give your lordship my eternall thanks and prayers.

"I might, perhaps, have better expressed these my sentiments some other way; yet I have presumed to doe it thus, by a letter, that there may remayne a testimony of infamy upon mee, if ever I abuse the admirable mercy I have found, either by future disloyalty to his majesty, or ingratitude to your lordship. And I wish your lordship would add one favour

VOL. IV.

more, which is to assure his most excellent majesty, and his royal highnes (how hard, or needles soever it be to beleieve me) that few can wish their royall persons, family, or interest, more prosperity and establishment, then doth,

"may it please your lordship,
"your lordship's most obedient, most humble,
"and most obliged servant,

April 9, 1662.

"H. CROMWELL (2)."

[C] *There is a tradition that he once was honoured with a visit from King Charles the Second, when his Majesty was returning from Newmarket.* The story, as related by Mr. Noble, we shall give in his own words.

"In this employment (husbandry) he was discovered by his Sovereign King Charles the Second, who, in returning from Newmarket, in the month of September, 1671, expressing his wish to call at some house and take refreshment, Lord Inchiquin, Henry's brother-in-law, then with his Majesty, observed, that there was a very honest Gentleman in the neighbourhood, that would think it an honour to entertain his Majesty, which the King was pleased with, and desired him to conduct them to his friend's seat. When they came into the farm-yard (which led to the house) his Lordship, taking up a muck-fork, and throwing it over his shoulder, went before Mr. Cromwell, who was then in the yard, and wondering at so large a company's coming so unexpectedly upon him, and still more at

6 Y

"this

(2) Noble's Memoirs of the Protectoral House of Cromwell, vol. i. p. 347, 348.

The death of Henry Cromwell was occasioned by that dreadful disorder, the stone. His Majesty being informed of his illness by the Earl of Suffolk, expressed his regard for him, enquired into the particulars of his complaint, and recommended that certain drops should be given him, of which the King, who had a chemical turn, entertained a high opinion. It was on the twenty-third of March, 1673-74, that Henry departed this life, and in the forty-seventh year of his age. Two days after his decease, he was buried within the Communion-Rails of Wicken-Church, close to his mother. After the Restoration, he conformed to the Church of England, and died in that Communion. This, however, did not prevent his retaining a great regard for the Nonconformists. To Richard Parr, M. A. the ejected Vicar of Chippenham, he afforded a seasonable assylum; and it is certain that most, if not all, of his descendants continued among the Protestant Dissenters. The testimonies to the excellence of Henry Cromwell's character are numerous and decisive. Dr. Leland says, that he was penetrating, just, and generous. Mr. Neal declares, that he was a wise and discreet Governor; that, by his prudent conduct, he kept the Irish in awe; that he brought that nation into a flourishing condition; and that he behaved with such a generous impartiality, as gained him the esteem even of the Royalists themselves. Cardinal Mazarine acknowledged, that he admired him very much. Sir Anthony Ashley Cooper, in a letter to him, said, "You may have many who love his Highness's son, but I love Henry Cromwell, were he naked, without all those glorious additions and titles, which, however, I pray may continue and be increased on you." And the late Arthur Onslow, Esq; so long Speaker of the House of Commons, than whom no one was a better judge of characters, was of opinion, "that he was truly a great man, and might pass for a great man in those great days (e)." It is remarkable, that there is no engraved portrait or medal of so eminent a person. Oliver Cromwell, Esq; of Essex-street, in the Strand, the sole male-descendant of the family now living, has an original picture of him; the only one, he thinks, that is known (f). Mr. Noble, however, has mentioned others. Elizabeth, Henry's Lady, was a woman of exemplary conduct, and elegant manners. She is said to be still remembered in the neighbourhood, by the appellation of the good Lady Cromwell. It is related, that, before her marriage, she had a dislike to the Protector Oliver; but that, upon her union with the family, all her prejudice was removed, and changed into a very affectionate esteem for her father-in-law, as the most amiable of parents. She survived her husband some years; and dying on the seventh of April, 1687, at the age of fifty-two, was buried close to him, in the Church of Wicken (g). For an account of Henry Cromwell's posterity, we refer, as before, to Dr. Gibbons, to Hughes's Letters, to the Bibliotheca Topographica Britannica, and to Mr. Noble.

"Thus," says the author to whom we have so often referred, "the Protectorate House of Cromwell may not be improperly represented as a river, which taking its rise in the mountains of Wales, continued long in that Principality; when gently gliding down the hills of Glamorganshire, and meandering through various countries, it arrived at the Imperial Thames; where, having gained great strength, and enlarged its bounds, it changed its ancient name, and turning its course North-East, rolled on into Huntingdonshire, where it loitered a considerable time and divided itself into various branches. One of the least of them suddenly bursting its banks, swelled itself into a tremendous river, which not only swallowed up the main stream, but at length overflowed three mighty nations; and by its rapidity, and dreadful violence, spread terror throughout the globe; when it as silently, and suddenly, returned to far less than its original limits; leaving, however, many noble branches behind it. Ever since it has softly murmured on towards the South; where, instead of its former boundless current, it is now only admirable for the clearness and goodness of its stream (h).]"

K. (h) Noble, *ubi supra*, p.

"this ceremony of the muck-fork. Nor was the King without his surprize. What, says his Majesty of Fun, is the reason of this? "Why, Sire, says the muck-fork bearer, this Gentleman, before whom I carry this instrument of husbandry, is Mr. Henry Cromwell, to whom I had the honour of being mace-bearer, when he was in Ireland. Charles laughed, poor Mr. Cromwell was confounded; but the ease of the Sovereign dissipated all disquietude. The hungry company were treated with what the hospitable Henry had, and they departed with good humour and pleasure on all sides (3)." Mr. Noble informs us, that this story was communicated by the Rev. Edward Turner, of Burwell, in Cambridgeshire; and adds, that he has reason to suppose that Mr. Turner is right in his relation, because he is a very curious Gentleman, resides near the place, and is some way allied to the Cromwells. Anecdotes make so admirable a figure in convivial intercourse, and are so much sought for,

and delighted in at present, that it is an unpleasing employment to weigh them in too nice a balance. Nevertheless, a regard for truth obliges us to point out the incongruities of the above story. We would ask, in the first place, how Lord Inchiquin came to be Henry's brother-in-law? No such circumstance occurs in all Mr. Noble's elaborate researches into the affinities of the Cromwell family. Secondly, was it likely that the eldest son of a Peer (for the Earl of Inchiquin's father was living at the time of Henry's administration in Ireland) should condescend to the humble office of being mace-bearer to the Lord Lieutenant? Thirdly, there is good reason to believe, that this Nobleman, at that very time, resided abroad with his father. Fourthly, it is probable that Lord Inchiquin, in September, 1671, was at Tangier, of which he was Governor. The fact, we apprehend, is, that, on some occasion or other, King Charles the Second was at Henry Cromwell's house; but the circumstances of the visit cannot now be ascertained.

(e) Leland's Hist. of Ireland, vol. iii. p. 398. Neal's Hist. of the Puritans, vol. iv. p. 181. Noble's Mem. *ubi supra*, p. 211—215. (f) From the information of Mr. Cromwell.

(3) Noble, *ubi supra*.

* * [CROXALL (SAMUEL), a Divine of the Church of England, and author of several ingenious productions, was born at Walton upon Thames in Surrey (a); but in what year we are unable to ascertain. He was son of the Rev. Mr. Samuel Croxall, Rector of Hanworth, Middlesex, and Vicar of Walton (b). He was educated at Eton School, and from thence was removed to St. John's College, Cambridge. It is supposed to have been while he was at the University, that he became enamoured of Mrs. Anna-Maria Mordaunt, to whom he afterwards addressed his "Fair Circassian," in a dedication, expressive of an ardent passion, but written in a very bombastic style, and with expressions that bordered on profaneness. Having early imbibed an attachment to the Whig interest, he employed his pen in favour of that party during the latter end of Queen Anne's reign; and published "Two original Cantos, in imitation of Spenser's Fairy Queen," as a satire on the Earl of Oxford's administration (c). In 1715, he addressed a Poem to the Duke of Argyle, upon his obtaining a victory over the rebels; and the same year published "The Vision," a poem, addressed to the Earl of Halifax. It was in the year 1720, that he published "The Fair Circassian [A]," in 4to. but without his name, as he was then probably in orders, and did not think it prudent openly to avow such a performance. Soon after he quitted the university, he was instituted to the Vicarage of Hampton in Middlesex (d); and in 1722, he published, "Fables of Æsop, and others, translated into English: with instructive applications [B]." This collection of fables was well received,

(d) Ibid.

[A] *The Fair Circassian.* A small part of this poem was first printed in Steele's Miscellanies, and has been since re-printed by Mr. Nichols, in his Select Collection of Poems, vol. iv. p. 120. The Fair Circassian is a very free translation, or imitation, of Solomon's Song. As a poetical composition it has considerable merit, but it is too licentious in its tendency. The eighth edition was printed in 1765. Though Mr. Croxall published it without his name, and only as written by "a Gentleman Commoner of Oxford," yet it was some years after known to be his, and he was attacked for it with great severity by Mr. Cragg, one of the Ministers of the city of Edinburgh, who published a small volume of *Spiritual Poems*, in one of which are the following lines:

'Curfed be he that the Circassian wrote,
'Perish his fame, contempt be all his lot
'Who basely durst in execrable strains,
'Turn holy mysteries into impious scenes.'

Mr. Cragg also expressed great indignation at the author of the "Fair Circassian," for having 'prostituted his muse to the purposes of lewdness, in converting the Song of Solomon into an amorous dialogue between a king and his mistress,' and he observed, that he could not have expected 'such profanation from a Clergyman (1).'

(1) Lives of the Poets, vol. v. p. 291, 292.

It is observed in the notes to the Bible of the Messieurs of Port Royal, that Solomon's Song is a 'spiritual Epithalamium, in which Solomon, animated by the spirit of God, sings the praises of Jesus Christ, and of the Church.' Another writer, after taking notice that there have been various opinions respecting the design of Solomon's Song, remarks, that 'the most generally received is, that we are not to stick in the primary, and literal sense of this book of Solomon, and so look upon it as nothing but the fond dictates of an earthly passion; but we are to search for a secondary, and a spiritual meaning; and as the mutual affection of Christ, and his Church, is frequently in other parts of scripture described to us by the tender, and reciprocal affection of the married state, we are to consider this book as a mystical account of the spiritual espousals of Christ and the Faithful, and to explain the several parts of it by this key (2).' But it is well known that the learned Sebastian Castalio maintained, that the Song of Solomon was a profane piece, and as such ought to be left out of the canon of scripture; and others have adopted similar sentiments. It has been considered as an amorous Pastoral. The writer, who has been just quoted, says, 'We may, without any hesitation, assert, that it is of the pastoral kind. There are not, indeed, *totidem verbis*, shepherds and shepherdesses introduced in it. The personages, it must be confessed, are of a more distinguished character. But yet the scenes are entirely pastoral, and the sentiments of this piece are evidently such as are

not near so agreeable to any other way of writing. We have every where in it vineyards, flocks, flowers, birds, trees, gardens, fountains, love, beauty, simplicity, and nature. Nay all its ideas are in a manner borrowed from rural scenes. At least, there are as few instances of this rule's being transgressed, as there are in any of the ancient pastorals (3).—It is not improbable, that some of the favourers of the mystical interpretation were induced to entertain such sentiments solely by finding it among the sacred writings; from whence they but too easily agreed, that it must of necessity be explained in this allegorical manner; forasmuch as, if they did not look beyond the bare letter of it, it could not be thought to have been with any propriety ranked among the inspired volumes (4).—The Jews of the age of Solomon, out of an affectionate regard to their illustrious monarch, thought every thing of his composing ought to be preserved and given down to posterity, and as they preserved his *Proverbs* as a monument of his wisdom, and *Ecclesiastes* of his repentance, they probably chose this out of many others to be kept, as a proof of his gallantry and politeness. But Rabbins and Targumists afterwards arose in Israel, who knew not Solomon, and being fond of shewing their deep penetration, gave it a new and figurative sense, and immediately ranked it among their authentic scripture (5).'

(3) Ibid. p. 49.

(4) Ibid. p. 17.

(5) Ibid. p. 13.

The same writer also observes, that if the Song of Solomon be considered only as a mere human composition, 'the whole, and every part of it, considered only in that light, is as easy, consistent, and intelligible, as can reasonably be expected in a piece of such antiquity (6).—There are allegories in other parts of scripture; yet in the very obscurest of them there is always something to fix and ascertain the design of the author, and to assist us in investigating their meaning. But is this the case with the Song of Solomon? Is there, through the whole, any the least hint given us, that it relates to Christ, and his Church? or that the Beloved, that is spoken of, is any other, than Solomon himself; or the Fair, that is celebrated, any other than his Bride (7)?' This writer also remarks, that the name of God is never once mentioned in Solomon's Song, and that this poem is no where quoted, or referred to in the New Testament. 'A pure and heavenly flame,' says he, 'shines through every other part of the Sacred Writings; but who, without doing the greatest violence to reason, can discover, in this book, any thing but a mere earthly passion (8)?'

ed, and has been much used in schools. The ninth edition, in 12mo. was printed in 1770. Mr. Croxall also wrote all the dedications prefixed to the "Select Novels," printed for Watts in 1729 (e). He was likewise concerned, with several others, in the translation of Ovid's *Metamorphoses*, of which he performed the story of Nisus and Scylla, the Labyrinth, the funeral of Memnon, Dædalus and Icarus, part of the fable of Cyparissus, and the greatest part of the eleventh book (f). In February, 1730-31, he was instituted to the united parishes of St. Mary Somerset and St. Mary Mountshaw, in London, which he held till his death. He was also Chancellor, Prebendary, Canon Residentiary, and Portionist of the Church of Hereford, and became Doctor in Divinity. In 1732, he was appointed Chaplain to the King, and was made Archdeacon of Salop in the Diocese of Hereford; in 1734, he obtained the Vicarage of Selleck in Herefordshire; and the following year he published, in one volume, 8vo. "Scripture Politics: Being a View of the Original Constitution, and subsequent Revolutions, in the Government, religious and civil, of that People, out of whom the Saviour of the World was to arise: as it is contained in the Bible." In this work he treats of the Mosaic law, of the Holy Land, the origin of the people of Israel, their forms of government, their military affairs, and their religious rites, ceremonies, and ecclesiastical officers. It is not a performance of much erudition [C], and seems chiefly intended to render the Old Testament more easily understood by ordinary readers. In 1750, he published a poem, entitled, "The Royal Manual;" which he stated, in the preface, to be the production of Andrew Marvel; but it was supposed to have been written by himself (g). A poem, called, "Colin's Mistakes," which has been lately re-printed by Mr. Nichols (h), has also been attributed to Dr. Croxall. He is reported to have chiefly governed the Church of Hereford during the old age of Bishop Egerton; and it is said, that he pulled down an old stone chapel, adjoining to the Palace, and with the materials built part of a house for his brother, Mr. Rodney Croxall (i). Dr. Croxall died, at a very advanced age, on the 13th of February, 1752 (k).] T. (k) *Ibid.*

(h) Select Collection of Poems, vol. vii. p. 345.

* * [Besides his other preferments, Dr. Croxall was House Chaplain to the Royal Palace at Hampton Court. While he held this employment, he preached a Sermon on a public occasion, in which, under the character of a corrupt and wicked Minister of State, he was supposed to mean Sir Robert Walpole. Sir Robert had stood in his way to some ecclesiastical dignity which he wished to obtain. It was expected that the Doctor, for the offence he had given, would have been removed from his Chaplainship: but the Court over-ruled it, as he had always manifested himself to be a zealous friend to the Hanover Succession. To the list of his Poems may be added, an Ode, inscribed to King George the First, on his landing to receive the Crown (l).]

Dr. Croxall, in the course of his life, published six single Sermons. The first was preached in 1715, from John xiii. 35, and entitled, "Incendiaries no Christians;" the second in 1723, from Isaiah xxxviii. 18, 19; the third in 1724, from 1 Timothy iv. 6, at the Consecration of Bishop Egerton; the fourth on the 30th of January, 1730, before the House of Commons, from Proverbs xxv. 5; the fifth in 1738, from 2 Samuel xii. 7; the title of which is, "The Royal Sin, or Adultery in a King rebuked;" and the sixth in 1741, from Psalm lxxxvii. 7. on the Antiquity, Dignity, and Advantages of Musick (m).

(l) From Lord Egmont's Manuscript Biographical Collections.

A late author has censured Dr. Croxall's Fables, as being above the comprehension of those by whom alone they are read, and, at the same time, as composed in a very mean style. With regard to his ordinary mode of expression, the writer adds, that it aims at humour without reaching it; that it is totally destitute of that elegant simplicity in which a narrative of this kind should be presented to children; and that it were easy to fill a volume with the vulgarisms and absurdities of Croxall's *Æsopian Fables* (n). The book, however, is still in the possession of the schools.] K.

(m) Cooke's Preacher's Assistant, vol. ii. p. 95.

(n) Winter Evenings, vol. i. p. 210-212.

'our best regards, and every vice which we are most concerned to avoid.' In the applications of these Fables, Dr. Croxall has introduced sundry remarks, in order to instil into the minds of youth sentiments of civil liberty, and has made many useful observations on life and manners.

[C] *Not a performance of much erudition.* In his preface, Dr. Croxall says, 'The whole scope of the Sacred Writings, from the beginning to the end, appears evidently to be but this one, *The salvation of mankind through Jesus Christ*. Which being attainable only by a proper faith, and a good moral life, the Bible contains nothing but what relates to one or the other of these; nothing but genealogies,

types, predictions, and demonstrations, concerning the Messiah; and institutions, precepts, exhortations, and examples, for living righteously. Therefore, that I might not burthen, either the reader or myself, with more than was necessary, and perhaps safe upon this occasion, I have omitted consulting any of those very learned authors who have written professedly upon the same subject, except Sigonius; and him, more for method than any thing else; keeping as close as possible to the express sense and meaning of the scriptures; which I take to be the best, if not the only allowable interpreters of what themselves contain (g).']

CUDWORTH (RALPH), a very learned and rational Divine, son of Ralph Cudworth, D. D. Rector of Aller in the County of Somerset [A], was born at Aller in 1617.

[A] *Son of Ralph Cudworth, &c.* He [the father] was at first Fellow of Emanuel College and Rector of St. Andrew's in Cambridge, then Vicar of Coggeshall in Essex, and afterwards Rector of Aller, and Chaplain to

(3) *Vita, ubi supra.*

1617 (a). His mother was of the family of Machell, and had been nurse to Prince Henry, eldest Son of King James I. After Dr. Cudworth's death, which happened in August or September, 1624 (b); she married again to Dr. Stoughton, an eminent Preacher in those times, who took a particular care of his son-in-law's education. He discovered from the first a quick and penetrating genius, and made so good progress in his studies, that at the age of thirteen he was admitted Pensioner of Emanuel College [B]: however, he was not matriculated as a Student in the University till July 5th, 1632. What proficiency he made there in all kinds of learning, particularly in Philosophy, his excellent Works do abundantly testify. In 1639 he took the degree of Master of Arts; and about the same time being chosen Fellow of his College, he became so eminent a Tutor, that he had eight-and-twenty Pupils at once; a thing never known before even in the largest Colleges in the University. Among them was the famous William Temple, afterwards created a Baronet (c). Not long after, he was presented by Emanuel College to the Rectory of North-Cadbury in Somersetshire, a living worth near three hundred pounds a year, and probably kept it till the year 1656 (d). The first things he published were, *A discourse concerning the true Notion of the Lord's Supper*; and, *The Union of Christ and the Church shadowed, or in a shadow*, printed at London in 1642. About 1644 he took the degree of Bachelor of Divinity [C], and the same year he was chosen Master of Clare-Hall, in the room of Dr. Paske who was ejected; where he had the honour of having under his care the celebrated John Tillotson. The next year, Dr. Metcalfe resigning his place of Regius Professor of Hebrew, Mr. Cudworth, who was a great master of the oriental languages, was unanimously appointed, on the 15th of October, to succeed him. From this time he applied himself entirely to his academical employments and studies; and read his public lectures every Wednesday; the first being upon the structure and plan of the Temple of Jerusalem. In 1647 he printed, at Cambridge, a Sermon on 1 John ii. 3, 4. which he had preached, the 31st of March of the same year, before the House of Commons at Westminster [D]. In 1651, he took the degree of Doctor in Divinity (e). Notwithstanding his preferments, yet, whether it was owing to that neglect and contempt of the things of this world, which are common among studious persons, or to any other cause, certain it is, that Dr. Cudworth's income was not sufficient to maintain him; and therefore he left, upon that account, the University for a while: but, being extremely beloved, he was soon invited thither again. For, upon the death of Dr. Samuel Bolton, Master of Christ's College, in October 1654, he was chosen to succeed him. The same year he married; and spent in this place the remainder of his days, being very careful of young Gentlemen's education. January 16, 1656, he was one of the Divines appointed by the Grand Committee for Religion (f), to consider of the translations and impressions of the Bible [E]. The first of December, 1662, he was presented by Gilbert Bishop of London, to the Vicarage of Ashwell, in the county of Hertford (g). And in 1678, he was installed Prebendary of Gloucester (h). But the most remarkable circumstance of his life, and what does him most honour, is, that he was the Author of *The True intellectual System of the Universe*; a book full of excellent reasoning, and a great variety of curious learning [F]. As one extreme is generally apt to produce another, the pious Nonsense, and

(d) For then S. Cradock was presented thereto. See A. Wood's *Faßti*, vol. ii. col. 71.

(g) Bishop Ken-
net's Register
and Chronicle,
&c. p. 835.

to King James I. He published several pieces of Mr. Perkins, and added *A Supplement to Mr. W. Perkins's Commentary upon St. Paul's Epistle to the Galatians*; which is all he ever published under his own name (1).

[B] — *At the age of thirteen he was admitted Pensioner of Emanuel College.* And though he was so young, his father-in-law declared, That he was as well grounded in school-learning, as any boy of his age that went to the University (2).

[C] *He took the degree of Bachelor of Divinity.* The questions he disputed upon, at the commencement at Cambridge that year, were these; There are eternal and indispensable reasons (or differences) of good and evil; and, There are incorporeal substances immortal in their own nature (3).

[D] *A Sermon on 1 John ii. 3, 4.* It was printed in 4to, containing 82 pages, and reprinted in folio to be placed at the end of his Intellectual System. In the Dedication of it to the House of Commons, he told them, That the scope of that Sermon was not to contend for this or that opinion, but only to persuade men to the Life of Christ, as the pith and kernel of all religion; without which all the several forms of religion in the world, though we please ourselves never so much with them, are but so many several dreams.

[E] *He was one of the Divines appointed, &c.* These Divines, of which the chief, besides Dr. Cudworth, were, Dr. Walton, Mr. Hughes, Mr. Clarke, Mr. Castle, and Mr. Poulk, often met at the Lord

Commissioner Whitelock's, and had the most learned men in the oriental tongues to consult with in this great business, and divers excellent and learned observations of some mistakes in the translations of the Bible in English; which yet was agreed to be the best of any translation in the world. But this design became fruitless by the Parliament's dissolution (4).

[F] *The true Intellectual System, &c.* The whole title of it is, *The true Intellectual System of the Universe: The first part; wherein, all the Reason and Philosophy of Atheism is confuted; and its Impossibility demonstrated.* By R. Cudworth, D. D. Being surprized at the length of the first part, he published it, as a thing complete of itself; designing to compose and publish afterwards a second and third part, which, however, he never did (5). An abridgment of this book was published in 1706, under the following title, *A Confutation of the Reason and Philosophy of Atheism: being in a great measure either an Abridgment or an Improvement of what Dr. Cudworth offered to that purpose in his True Intellectual System of the Universe. Together with an Introduction, in which among accounts of other matters relating to this Treatise, there is an impartial examination of what that learned person advanced touching the Christian Doctrine of a Trinity in Unity, and the Resurrection of the Body* In two Volumes. By Tho. Wise, B. D. Fellow of Exeter College, &c. in Oxford. This abridgment is reckoned to be well done: the style being clear and easy, and the matter well digested. A Latin translation of the Intellectual System was published

(4) Whitelock, *ubi supra.*

(5) Preface.

and stupid Enthusiasm, that had prevailed in this kingdom during the times of confusion, were succeeded, in the licentious reign of King Charles II. and even some time before, by Atheism, Profaneness, and Irreligion. Many of our best Divines endeavoured to stop their progress, but none with more vigour or greater success than Dr. Cudworth. 'None better knew how to use the arms of Reason and Learning, as one expresses it (i), to conquer the presumptuous ignorance of Hobbes, who had acquired a great reputation at court.' 'Tis no wonder therefore that King Charles's courtiers should undervalue the

(i) Mosheim in vit. Cudworth, ubi supra.

(i) See J. Clerici Vita, Amstelod. 1711. 8vo. p. 129.

True intellectual System (k): but, notwithstanding their vain efforts, it has and will maintain its reputation. The Author was undoubtedly several years about it, though it was not published till 1678 [G]. Besides the four books already mentioned, Dr. Cudworth published in 1664, a Sermon preached at Lincoln's-Inn, on 1 Cor. xv. 57. and a treatise intitled *Deus Justificatus*, or, *The Divine Goodness vindicated and cleared, against the Assertors of absolute and inconditionate Reprobation*. He left several books in manuscript [H], of which only one has been printed since his decease, intitled, *A Treatise concerning eternal and immutable Morality* [I]. He died at Cambridge June 26, 1688, in the seventy-first year of his age, and was buried in Christ's College. Several sons that he had died young; but one daughter, named Damaris [K], born January 18, 1658, survived him. She was second wife to Sir Francis Masham, of Oates in Essex, Baronet, and had by him a son, Francis Cudworth Masham, Esq (l); one of the Masters in Chancery, Accomptant-General of the said court, and foreign Apposer in the Court of Exchequer, who died May 17, 1731. Dr. Cudworth was a man of great piety and moderation, of uncommon prudence; and especially of very extensive learning: for he was not only a good Linguist and Antiquary, but also an able Mathematician, a subtil Philosopher, and a profound Metaphysician. In his small treatises, he shows himself well skilled in the oriental languages; as he appears in his *Intellectual System* a perfect master of the Platonic Philosophy; with a great strength of genius, and a vast compass of learning. He hath in it some particular notions; namely, of a *Plastic Nature*, which, subordinate to the Supreme Being, forms and organizes the bodies of animals, and produceth other phænomena (m): and, what he saith concerning the *Trinity* (n), and the *Resurrection* (o), is thought not to be exactly conformable to the received opinions [L]. But, notwithstanding, he must be impartially allowed

(m) Intellectual System, &c. p. 146, 147, &c. This notion was adopted by the great Mr. Ray, in his Wisdom of God, &c. (o) Pag. 784, &c.

published at Jena 1733, in two volumes, fol. by John-Laurence Mosheim, D. D. illustrated with notes and dissertations.

[G] *Though it was not published till 1678.* It was printed in a thick folio containing 999 pages, besides the Preface and Contents. The *Imprimatur*, at the end of the Preface, bears date May 29, 1671, which shows that the author kept it by him a considerable time before he published it.

[H] *He left several books in manuscript.* The titles of them are, I. *A Treatise concerning moral Good and Evil*, in several volumes in folio, containing near 1000 pages. The design of it is to prove, that morality is founded in nature, and doth not depend upon the arbitrary will of any Being. He also exposes Epicurus's notions, and Hobbes's Morality and Politics. II. *A Treatise of Liberty and Necessity, wherein the foundations of the Philosophy of Atheism are destroyed, the certainty of Morality established, and the nature of it explained.* It consists of 1000 pages in folio, and solves the objections of the Stoics, antient Atheists, and some modern Christians, against human liberty. III. *A Commentary on the Seventy Weeks mentioned by the Prophet Daniel, wherein the several explications of them by the Jews, and some Christian writers, are examined and confuted*, 2 vols. fol. IV. *Of the Truth of the Christian Religion against the Jews.* He mentions this book in some of his works, but it has not yet been found among his MSS. V. *A Treatise of the Creation of the World, and the Immortality of the Soul.* A volume in 8vo. VI. *Of the Learning of the Hebrews.* VII. *An Explanation of Hobbes's Notions, concerning the Nature of God, and the extension of Spirits.*

[I] *A Treatise concerning eternal and immutable Morality.* It was printed at London in 8vo. 1731, with a Preface by Edward [Chandler] Lord Bishop of Durham; who therein observes, that the author 'proves in that book the falseness of the consequences with respect to natural justice and morality in God, which are deducible from the principles of those that maintain the second sort of fate, denominated by him *Theologick* (6). And thus it may be reckoned to be a sequel in part, of his first book against *material fate* (7). The author intitled it *Διαισιον* *φυσικὴ καὶ ἀνώγειον*, or *A Treatise concerning eternal and*

immutable Morality; and 'transcribed the best part of it with his own hand, as if it were speedily to be sent to the press (8).'

[K] *One daughter named Damaris.* She died April 20, 1708, and was buried in the Cathedral Church of Bath; where a monument is erected to her memory, in which this character is given of her — 'To the softness and elegance of her own sex, She added several of the noblest accomplishments and qualities of the other. She possessed these advantages in a degree unusual to either, and tempered them with an exactness peculiar to herself. Her learning, judgment, sagacity, and penetration, together with her candor, and love of truth, were very observable to all that conversed with her, or were acquainted with those small treatises she published in her lifetime, though she industriously concealed her name (9). Of the small treatises here mentioned, one was *A Discourse concerning the Love of God*. Printed at London, 1696, 12mo. The rest are not known. Mr. J. Locke lived in her family the 14 last years of his life.

(8) Ibid. p. 11.

[L] *Is thought not to be exactly conformable, &c.* He has been very severely treated upon that account; particularly by one (10), who calls him a Tritheistick, and says, 'the most that charity itself can allow the Doctor, if it were to step forth, and speak his most favourable character to the world, is, that he is an Arian, a Socinian, or a Deist.' A very hard and unjust censure!

(9) Peerage of England, by A. Collins, Esq; vol. iii. p. 435. Le Neve's *Monumenta Anglic.* vol. i. p. 146.

(10) J. Turner, Dedication before his Discourse of the Messiah, Lond. 1685, p. 17. 19.

[*] The article of our learned predecessor is accurate with respect to facts; but it might reasonably have been more copious in describing the works of so eminent a literary character as Dr. Cudworth. This defect, therefore, we shall endeavour, in some degree, to supply. His first publication, which was his "Discourse concerning the true notion of the Lord's Supper," merits notice, on account of the influence it has had on the sentiments of several considerable men. The principle which Dr. Cudworth maintains is, that the Lord's Supper is a feast upon a sacrifice. His tract has excited so much attention as to pass through various editions; and it has been quoted with great commendations by Selden, Barchart,

(6) See Intellectual System, &c. p. 3, &c. and Preface.

(7) Bishop Chandler's Pref. p. 9.

allowed to have been 'a great man in all parts of learning, divine and human, an honour

Historical and
Critical, vol. iv.
p. 484, note B.

chart, and Spencer (11). The doctrine advanced in it has so far stood its ground, as to have been supported, from time to time, by one divine or other, down to the present day. A work which adopts the same idea, was written above forty years ago, by Mr. Willets, a learned dissenting minister, at Newcastle under Lyne. Bishop Warburton, in the second volume of his discourses on the principles of natural and revealed religion, has elaborately sustained Dr. Cudworth's opinion; and the present Bishop of Chester (Dr. Cleaver) has very recently shewn himself to be an ingenious defender of the same sentiment. On the other hand, Bishop Hoadly, in his Plain Account, could discern no evidence of the Lord's Supper being a feast upon a sacrifice. That it is a groundless notion, was ably maintained, in a pamphlet, published in 1755, in answer to Warburton: and Cudworth's hypothesis has lately been refuted by Dr. Bell. Indeed, the idea that the Sacrament is merely a commemoration of the death of Christ, and calculated, in that view, to answer important moral purposes, is so rational and intelligible, and, at the same time, so conformable to the direct words of the institution, that there appears to be no necessity or foundation for having-recourse to any scheme of a more recondite and mysterious nature.

The dedication to the sermon which Dr. Cudworth preached before the House of Commons, in 1647, is omitted in the impression of it that was given at the end of the "Intellectual System," in 1678. This is the more to be regretted, as it displays the Doctor's sentiments, upon the nature of religion, and the value of learning, at a time of prevailing fanaticism and bigotry, in a manner which reflects no small credit on the liberality of his mind. We shall insert, therefore, an account of it, for which we are indebted to the great "General Dictionary."

"He observes there, that the scope of this Sermon was not to contend for this or that opinion, but only to persuade men to the *Life of Christ*, as the pith and kernel of all Religion; without which all the several Forms of Religion in the world, though we please ourselves never so much in them, are but so many several dreams. And those many opinions about Religion, that are every where so eagerly contended for on all sides, where this doth not lie at the bottom, are but so many shadows fighting with one another. So that I may well say of the true Christian, that is indeed possessed of the life of Christianity, in opposition to all those that are but lightly tintured with the opinions of it, in the language of the Poet,

Οἷον πίπνται τοὶ δ' ὡς σκῆλ' αἰσσοῦσι.

Wherefore I could not think any thing else either more necessary for Christians in generall, or seasonable at this time, than to stirre them up to the reall establishment of the Righteousnesse of God in their hearts, and that Participation of the divine Nature, which the Apostle speaketh of; that so they might not content themselves with mere phancies and conceits of Christ, without the Spirit of Christ really dwelling in them, and Christ himself inwardly formed in their hearts, nor satisfie themselves with the mere holding of right and orthodox opinions, as they conceive, whilst they are utterly devoid within of that Divine Life, which Christ came to kindle in men's souls, and therefore are so apt to spend all their zeal upon a violent obtruding of their own opinions and apprehensions upon others, which cannot give entertainment to them. "Which, besides its repugnancy to the doctrine and example of Christ himself, is like to be the bellows, that will blow a perpetual fire of discord and contention in the Christian Commonwealths; whilst in the mean time those hungry and starved opinions devour all the life and substance of Religion, as the lean Kine in Pharaoh's Dream did eat up the fat. Nor lastly, please themselves onely in the violent opposing of other men's Superstitions, according to the genius of the present times, without substituting in the room of

"them an inward Principle of Spirit and Life in their own souls. For I fear many of us that pull down idols in churches, may set them up in our hearts; and whilst we quarrel with painted glasse, make no scruple at all of entertaining many foul lusts in our souls, and committing continual idolatry with them." He afterwards desires the House of Commons, that after their care for the advancement of Religion and the public good of the Commonwealth, they would think it worthy of them to promote ingenuous learning, and cast a favourable influence upon it. I mean not, says he, that onely, which furnisheth the pulpit, which you seem to be very regardfull of; but that, which is remote from such popular use, in the several kinds of it, which yet are all of them both very subservient to Religion, and usefull to the Commonwealth. There is indeed a *ῥυθμιώδης*, as the Philosopher tells us, a bastardly kind of Literature, and a *ῥυθμιώδης γνῶσις*, as the Apostle instructeth us, a Knowledge falsely so called, which deserves not to be pleaded for. But the noble and generous improvement of our understanding faculty in the true contemplation of the Wisdom, Goodnesse, and other Attributes of God, in that great fabrick of the universe, cannot easily be disparaged without a blemish cast upon the Maker of it. Doubtlesse we may as well enjoy that which God hath communicated of himself to the creatures by this larger faculty of our understandings, as by those narrow and low faculties of our senses; and yet no body counts it to be unlawfull to hear a lesson plaied upon the lute, or to smell a rose. And these raised improvements of our natural understandings may be as well subservient and subordinate to a divine Light in our minds, as the natural use of those outward creatures here below to the life of God in our hearts. Nay all true knowledge doth of itself naturally tend to God, who is the Fountain of it; and would ever be raising of our souls up upon its wings thither, did not we *καταχωνεῖν ἐν ἀδικίᾳ*, detain it, and hold it down in unrighteousnesse, as the Apostle speaketh. "All Philosophy to a wise man, to a truly sanctified mind, as he in Plutarch speaketh, is but *ὁδὸς τῆς Θεολογίας*, matter for Divinity to work upon. Religion is the Queen of all those inward endowments of the soul, and all pure naturall knowledge, all virgin and undeflowred arts and sciences are her handmaids, that rise up and call her blessed. I need not tell you how much the skill of tongues and languages, besides the excellent use of all Philology in generall, conduceth to the right understanding of the letter of sacred Writings, on which the spirituall notions must be built; for can those possibly be ignorant of that, which have but once heard of a Translation of the Bible? The Apostle exhorteth private Christians to *whatsoever things are lovely, whatsoever things are of good report, if there be any virtue, if there be any praise, to think on those things*; and therefore it may well become you, (noble Gentlemen) in your publick sphere, to encourage so noble a thing as knowledge is, which will reflect so much lustre and honour back again upon yourselves (12)."

The Intellectual System is a work of such immense learning, and such great celebrity, that a fuller view of its design than our Predecessor has given cannot but be desirable.

"In the preface Dr. Cudworth tells us, that when he engaged the press, he intended only a discourse concerning Liberty and Necessity, or, to speak out more plainly, against the fatal Necessity of all and events; which, upon whatever ground, tained, will serve the design of Atheism, and mine Christianity and all Religion, as taking all guilt and blame, punishments and rewards. But afterwards he considered, that this, which is indeed a controversy concerning the True and Intellectual System of the Universe, does in the full extent of it take in other things; the Necessity of all actions and events being maintained by several persons upon very different grounds, according to the tripartite Fatalism mentioned in the beginning of the first chapter; the

(7) Bishop Burnet's Hist. of his own Times, vol. i. p. 462.

presided, to the whole University of Cambridge which he adorned (p), and to the Church and Age in which he lived (q).

(p) Bishop of Durham's Pref. to the Treatise concerning eternal and immutable Morality, p. 12.

the first of which, *supposing the material Necessity of all things without a God*, he tells us, is *absolute Atheism*; the second, *Immoral Theism*, or *Religion without any Natural Justice and Morality*, all just and unjust, according to this hypothesis, being factitious, made by arbitrary will and command only; and the third, such a Theism as acknowledges not only a God or omnipotent understanding Being, but also Natural Justice and Morality, founded in him, and derived from him; nevertheless no Liberty from Necessity any where, and therefore no distributive or retributive Justice in the world. "Whereas these three things are the fundamentals or essentials of true Religion. First, that all things in the world do not float without a Head or Governor; but that there is a God, an omnipotent understanding Being, presiding over all. Secondly, that this God being essentially good and just, there is *φύσει καλόν* *καὶ δίκαιον*, something in its own nature immutably and eternally just and unjust, and not by arbitrary will, law, and command only. And lastly, that there is something *ἐν ἡμῖν*, or, that we are so far forth the principles or masters of our own actions, as to be accountable to justice for them, or to make us guilty and blame-worthy for what we do amiss, and to deserve punishment accordingly." These three things, as the Doctor observes, taken all together, make up the wholeness and entireness of that, which he calls, *The True Intellectual System of the Universe*, in such a sense as *Atheism* may be called a false System thereof; the word *Intellectual* being added to distinguish it from the other, vulgarly so called, *Systems of the World* (that is, the *visible and corporeal World*) the *Ptolemaic*, *Tychonic*, and *Copernican*; the two former of which are now commonly accounted false, the latter true. And thus our Author's prospect being now enlarged into a *three-fold Fatalism*, or *spurious and false Hypothesis of the Intellectual System*, making all things necessary upon several grounds, he accordingly designed the confutation of them all in three several Books. The first against *Atheism*, (which is the *Democritic* fate) wherein all the Reason and Philosophy thereof is refuted, and the Existence of a God demonstrated, and so that *ἐκκὴ ἀνάγκη*, or material Necessity of all things, is overthrown. The second, for such a God as is not mere arbitrary Will omnipotent, decreeing, doing, and necessitating all actions, bad as well as good; but essentially moral, good, and just; and for a natural *Discrimen honestorum & turpium*, whereby another ground of the Necessity of all human actions will be removed. And the third and last, against *Necessity intrinsic and essential to all actions*, and for such a Liberty and *Sui-Potestas* in rational creatures, as may render them accountable, capable of rewards and punishments, and so objects of distributive or retributive Justice, by which the now only remaining ground of the fatal Necessity of all actions and events will be taken away. And all these three under that one general title of the *True Intellectual System of the Universe*; each book having besides, its own particular title. But the first of these books only appeared under the title abovementioned; our Author informing the reader in his preface, that tho' the other two books were and still are really intended by us, yet the compleat finishing and publication of them will notwithstanding depend upon many contingencies, not only of our life and health, the latter of which, as well as the former, is to us very uncertain; but also of our leisure or vacancy from other necessary employments. At the close of the preface he observes, that tho' some may think his work superfluous, upon pretence, that an Atheist is a chimera, no where to be found in the world, yet such persons are both unskilled in the monuments of antiquity, and unacquainted with the present age they live in, others having found too great an assurance from their own personal converse of the reality of them. "Nevertheless, continues he, this labour of ours is not intended only for the conversion of downright and professed Atheists (of which there is but little hope, they being sunk into so great a degree of fortiftness,) but for the

confirmation of weak, staggering, and sceptical Theists. And unless those exploders of Atheists will affirm also, that all men have constantly an unshaken faith and belief of the Existence of God without the least mixture of doubtful distrust or hesitancy, (which if it were so, the world could not possibly be so bad as now it is,) they must needs grant, such endeavours as these for the confirming and establishing of men's minds in the belief of a God by philosophic reasons, in an age so philosophical, not to be superfluous and useless (13)."

(13) *Ibid.* p. 485, 486, note F.

We shall add a farther account of Mr. Wise's Abridgment of the Intellectual System.

Mr. Wise in his introduction remarks, that Dr. Cudworth's book, which is the vastest magazine of reasoning and learning, that ever singly appeared against Atheism, is swelled with frequent repetitions, circumlocutions, and digressions, and the series and thread of it much interrupted by Greek and Latin quotations, so that hardly any writing will better admit of an abridgment; upon which account Mr. Wise undertook his work. He then proceeds to observe, that Dr. Cudworth, having laid down a general proposition, that the Heathens universally held but one unmade independent God, comes to shew that the Platonists in particular maintained an unity of the Godhead in their three divine Hypostases, viz. *Monad* or *Good*, *Mind*, and *Soul*; notwithstanding that they owned these three Hypostases to be numerically distinct, or to have distinct singular Essences of their own. To vindicate the Platonists in this point, he tells us, that the ancient orthodox Fathers of the Christian Church were generally of no other persuasion than this, that that Essence or Substance of the Godhead, which all the three Persons or Hypostases agree in, as each of them is God, was not singular or individual, but only one common or universal Essence or Substance. This and other assertions of the like nature in Dr. Cudworth's *Intellectual System*, have made so much noise in the world, that there was scarcely a pamphlet or book written for many years concerning the Trinity, especially in England, and in the heterodox way, which did not bring in the Doctor's authority; while on the other hand the orthodox treat his notion with the utmost severity. Mr. Wise therefore endeavours, as much as possible, to clear up and justify our Author's doctrine. He afterwards proceeds to consider Dr. Cudworth's opinion about the Resurrection, who, as appears from several passages of his *Intellectual System* thought, that the Resurrection-Body will not consist of the same substance with that, which was buried; and that it will not be a body of flesh, but an aetherial one; and that the present body is only a seed of the Resurrection. However Mr. Wise shews from some other passages in his works, that he has as plainly asserted the Resurrection of the same numerical Body, as in some places he denied it (14)."

(14) *Ibid.*

It is not easy to meet with a greater store-house of ancient literature than the "Intellectual System;" and various writers, we believe, have been indebted to it for an appearance of learning which they might not otherwise have been able to maintain. That Dr. Cudworth was fanciful in some of his opinions, and that he was too devoted a follower of Plato and the Platonists, will scarcely be denied even by those who are most sensible of his general merit. What he hath said concerning the Platonic Trinity has lately been remarked upon in the *Theological Repository* (15).

(15) *Theological Repository*, vol. iv. p. 95—97.

The reflections that have been cast upon such a man as our Author, by Mr. Turner, (mentioned in note [L]), and by other bigoted writers, are altogether contemptible. It is the lot of distinguished merit to be thus treated. Lord Shaftesbury, speaking on this subject, has given an honourable testimony to the memory of Dr. Cudworth. "You know," says his Lordship, "the common fate of those who dare to appear fair authors. What was that pious and learned man's case, who wrote the *Intellectual System of the Universe*? I confess it was pleasant enough to consider, that though the whole

"world

"world were no less satisfied with his capacity and learning, than with his sincerity in the cause of Deity; yet he was accused of giving the upper hand to the Atheist, for having only stated their reasons, and those of their adversaries, fairly together (16)."

(16) Characteristicks, vol. ii. p. 262.

It is observed by Dr. Birch, that Dr. Cudworth's Intellectual System of the Universe has raised him a reputation, to which nothing can add, but the publication of his other writings still extant in manuscript (17). That these writings are very valuable, cannot be doubted. We may be assured that they display a great compass of sentiment, and a great extent of learning. Nevertheless, from their voluminous quantity, from the abstruseness of the subjects they treat upon, and from the revolutions of literary taste and opinion, it is morally certain, that the publication of them would not be successful in the present age. The history of the fate of Dr. Cudworth's Posthumous Works is somewhat curious. Having been left to the care of his daughter, Lady Masham, they for a long time quietly reposed in the library at Oates, in Essex. But, about the year 1762, when the late Lord Masham married his second Lady, his Lordship thought proper to remove a number of volumes of ancient learning, which had been bequeathed to the family by Mr. Locke, and the manuscripts of Dr. Cudworth, to make room for books of polite amusement. For this purpose, he sold either the whole, or a considerable part of them, to Mr. Robert Davis, then a Bookseller in Piccadilly. Mr. Davis being told, or having concluded, that the manuscripts were the productions of Mr. Locke, it became an object of consideration with him, how to convert them, as a tradesman, to the best advantage. They contained, among other things, sundry notes on scripture. About the same time, a number of manuscript scriptural notes by Dr. Waterland came into the possession of the Booksellers. The business, therefore, was, by the aid of such celebrated names as Mr. Locke and Dr. Waterland, to fabricate a new Bible with Annotations. At a consultation, however, it was suggested, that, though these names were very important, it would be necessary, to the complete success of the design, to join with them some popular living character. Dr. Dodd was then in the height of his reputation as a preacher; and, accordingly, he was fixed upon to carry on the undertaking. This was the origin of Dr. Dodd's Bible. Part of the materials put into his hands the Doctor made use of in the Christian Magazine. When the manuscripts were returned to Mr. Davis, he carried them down to Barnes in Surry, which was his country retirement, and threw them into a garret, where they lay exposed to the dangers of such a situation. About the beginning of the year 1777, a Gentleman, who had a veneration for the name of Mr. Locke, and was concerned to hear that any of his writings were in danger of being lost, went to Barnes, to see these manuscripts; and being positively assured, by Mr. Davis, that they were the real compositions of that eminent man, he immediately purchased them for forty guineas. He

was, however, soon convinced, after an examination of them, that the authority of the bookseller was fallacious. This being the case, he remonstrated against the deception; and the vender condescended to take them again, upon being paid ten guineas for his disappointment in the negotiation. In the investigation of the manuscripts, the Gentleman having discovered, by many incontestable proofs, that they were the writings of Dr. Cudworth, he recommended them to the Curators of the British Museum, by whom they were purchased; and thus, at last, after many perils and mutilations, they are safely lodged in that noble repository (18).

Mr. Granger observes, that Dr. Ralph Cudworth held the same rank in Metaphysics that Dr. Barrow did in the Sublime Geometry; and his daughter he calls the learned and accomplished Lady Masham. Justly does her memory deserve to be held in honour, both for her own attainments and her unshaken friendship to Mr. Locke. Of her Treatise concerning the Love of God, which was published at London, in 1696, in 12mo. without her name, we shall subjoin some account, from the General Dictionary.

"She begins with observing, that whatever reproaches have been made by the Romanists, on the one hand, of the want of books of devotion in the Church of England; or by the Dissenters on the other, of a dead and lifeless way of preaching; it may be affirmed, that there cannot any where be found so good a collection of discourses upon Moral Subjects, as might be made of English Sermons and other Treatises of that nature written by the Divines of our Church; which books are certainly in themselves of the greatest and most general use of any, and do most conduce to that, which is the chief aim of Christianity, a good life." She then animadverts upon those, who undervalue Morality, and others, who strain the duties of it to an impracticable pitch, and pretend to ascend by it to something beyond or above it; and afterwards proceeds to consider the conduct of those, who build their practical and devotional Discourses upon principles, which not only will not bear the test, but which oblige them to lay down such assertions of Morality, as sober and well disposed Christians cannot understand to be practicable. And here she applies herself to the examination of Mr. John Norris's scheme in his Practical Discourses and other Treatises, wherein he maintains, that "mankind are obliged strictly, as their duty, to love with desire nothing but God only, every degree of desire of any creature whatsoever, being sinful." Which assertion Mr. Norris defends upon this ground, that God, not the Creature, is the immediate efficient cause of our sensations; for whatsoever gives us pleasure has a right to our love; but God only gives us pleasure; therefore he only has a right to our love. This hypothesis is considered with great accuracy and ingenuity by Lady Masham, and the bad consequences of it represented in a strong light. This Discourse was translated into French by Mr. Coste in 1705 (19)."]

CUFF or CUFFE (HENRY), a celebrated wit, a famous scholar, and the unfortunate Secretary of the unhappy Earl of Essex, who suffered towards the close of the reign of Queen Elizabeth. He is by some said, or rather suggested, to have been but of low birth (a); but very unjustly, since there is good evidence to prove, that his ancestors had been reputed Gentlemen for several descents, and had lands to a considerable value about Creech and Taunton in Somersetshire (b). He was born at Hinton St. George in that county, about the year 1560 (c), was educated at a Grammar-school, and gave very early marks both of genius and application (d); insomuch that, in 1576, he was removed to Oxford, and entered there of Trinity College (e). His parts were so quick, and his diligence so great, that he very soon distinguished himself from most of his contemporaries, more especially in his knowledge of Greek, and his admirable faculty in disputing. He became, in due time, Fellow of his College, and would, without doubt, have gone through his academical studies with all the success and applause imaginable, if it had not been for a certain hastiness of temper, which induced him to speak his mind very freely on subjects and of persons, with whom he had little or nothing to do. A saying of his of Sir Thomas Pope, who was the Founder of the College in which he was educated, proved fatal to him, so that he was turned out of his Fellowship, and expelled the College (f). His

merit, however, was so great, and his reputation for learning so extraordinary, that he was received into Merton-College by Sir Henry Savile, then Warden of it, and who was particularly remarkable for being a most disinterested patron of such as were truly scholars (g). In 1586 Mr. Cuff was elected Probationer-fellow of that College, and, being very intimate with many of the greatest men of those times who were bred at this University, he was looked upon as one capable of making a shining figure in the world (h); more especially as he was known to turn his thoughts to active life, and to apply himself with great vigour to the more polite as well as abstruser parts of learning. In 1588 he became Fellow of Merton-College, and, on the 20th of February following, he took the degree of Master of Arts (i). Amongst other persons of note with whom he had great intimacy, one was the learned Mr. Camden, in commendation of whose excellent *Britannia* he wrote a Greek epigram, that has been much admired (k). This indeed was the happiest part of his life, and it had been very fortunate for him if he had contented himself with that easy and honourable situation, which his own learning, and the assistance of his friends in this University, had procured him, notwithstanding the slip he had made in the earlier part of his life, from a vivacity of temper which never left him [A]. He was afterwards promoted to the Greek Professorship, and was chosen Proctor of the University April 10th, 1594 (l). At what time he left the University, or upon what occasion, does not appear; but there is great reason to believe, that it was for the sake of improving himself by travelling into foreign parts (m); for he was always inclined rather to a busy than a retired life, and held, that learning was of little service to any man, if it did not render him fitter for being employed in matters of importance. This disposition of his recommended him very much to the favour of Robert Earl of Essex, who was himself much of the same temper; that is, equally fond of knowledge and business, and strongly persuaded the former was of very little use but as it fitted men for the latter. His Lordship writing admirably well, and being an excellent judge of the writings of other men, thought it would be highly useful to himself, and the means of promoting Mr. Cuffe, if he took him into his service, as well as into his protection; and accordingly, about the time that he became Lord Lieutenant of Ireland (n), Mr. Cuffe was appointed his Secretary. It appears, from the private as well as public histories of those times, that he was very much in his confidence; but, whether the Earl intrusted him with the dark designs he carried on with Tyrone, in order to make himself King of England, and Tyrone Lord Lieutenant of Ireland, is as little certain, as whether his Lordship ever had any such designs, or was so unfortunate only as to have them imputed to him by his enemies (o). This, however, is out of dispute, that, when the Earl returned from his expedition, in August 1599, to Dublin, and resolved to send over an account to the Queen of what he had concluded with Tyrone, he made choice of Mr. Cuffe to be the bearer, and, perhaps, used his assistance in penning those letters. This was certainly both a dangerous and a disagreeable service; which, however, Mr. Cuffe undertook, and very happily performed, delivering his letters safely to her Majesty; and afterwards, upon some insinuations to his prejudice, upon which he was sent for to the Queen, he justified himself to her satisfaction (p) [B]. As he had naturally a very high spirit, was sincerely attached

(n) *Camd. Ann.* ed. T. H. p. 792.

[A] *From a vivacity of temper which never left him.* It was certainly a mark of the candour, as well as care, of Mr. Wood, that he took so much pains as to search the Heralds Office, in order to find the grant of a coat of arms made to Job Cuffe, our author's ancestor, by Christopher Baker then King at Arms, in the 36th of Henry VIII (1). He was in the wrong however to fix upon a late, and in some respects a low, writer, as author of those detracting passages, that passed so currently in the world to his prejudice; whereas, most undoubtedly, these took rise from what was said of him by a noble author (2), who wrote indeed at that time under direction, and we may believe could not but be rude to his Secretary, after being roundly schooled by the Queen, for speaking with common decency of his master. It was from him therefore that succeeding writers copied, though there wanted not others, well acquainted with those times and with the man, who spoke of him with decency, pity, and even with respect. He was but a very young man when he went to Oxford, and it was by the pregnancy of his parts that he became so early a Fellow of Trinity College. Mr. Wood tells us, in one place, that he was forced to resign his Fellowship for saying somewhat that was true of the Founder (3). In another place, however, that is, in a Collection of Historical Passages, he has set down the whole story, and that upon good authority; which as it very fully justifies what we have said in the text, the reader shall have in his own words (4): 'Dr. Bathurst told

me, that our Cuffe was of Trinity College, and expelled from thence upon this account: the Founder, Sir Thomas Pope, would, wheresoever he went a visiting his friend, steal one thing or other that he could lay his hands on, put it in his pocket, or under his gown. This was supposed rather an humour than of dishonesty. Now Cuffe upon a time, with his fellows being merry, said, a pox this is a poor beggarly College indeed, the plate that our Founder stole would build such another. Which coming to the President's ears, was thereupon ejected, though afterwards elected into Merton College.' How dear he was to Sir Henry Savile, at that time Warden of Merton College, appears not only from his procuring him to be elected upon the very first occasion that offered after his own preferment, but also from a letter of his to the learned Camden, in which, in a very few words, he gives him the highest character, and styles him his own and Camden's intimate friend.

[B] *He justified himself to her satisfaction.* What we have to explain in this part of the work is, the share that Mr. Cuffe had in the Earl of Essex's proceedings; nor would this be of so much importance, if many of our Histories did not deliver things somewhat remote from truth in several instances, and directly contrary to it in others. It is generally set forth and believed, that the Earl went to Ireland with great joy and alacrity; whence it has been inferred, that he had dangerous designs in his head before he went

attached to the Earl of Essex, and looked upon the usage he met with from the court as effects rather of the power of the opposite faction, than the just punishment of the Earl's offences, he gave way to his resentments, and was one of those that dissuaded that unhappy Lord, after his emerging a little from that dark cloud of the Queen's displeasure, in which he had been involved, and suffered thereby severely, from prosecuting the recovery of her favour by those methods of humble duty, and deep submission, which others of his Lordship's friends advised (q). It is very possible, that both he and they might be prompted to the opposite counsels they gave, from certain views to their own interest, as well as those of the Earl; for Mr. Anthony Bacon, and Sir Francis his brother, had other friends at Court, and other means to trust to, than the countenance of the Earl of Essex, and might therefore advise him to what they thought best suited their own schemes. But it was quite otherwise with Mr. Cuffe: his sole dependance was upon the Earl, and, as he had no other hopes of attaining any considerable office than by his favour and protection, he was very desirous of seeing him quickly restored to the Queen's good graces, which he thought could not fail if he had once free access to the Court, which, therefore, he prompted him to obtain by any means, and at any rate (r) [C]. While the Earl of Essex followed the advice of the two Bacons, as well as during his Lordship's confinement after his precipitate return from Ireland, Mr. Cuffe had little or no access to him; but, after he recovered his liberty, and found that was not attended, as he expected, with a restitution of his power and credit, he began to recur to his old projects, and to converse once more with his old friends, by which means Mr. Cuffe was recalled again to his service, and to that measure of intimacy and confidence in which he had been formerly held (s). This, together with the great likeness of their tempers, was the source of both their misfortunes; for the Earl thenceforward began to dislike, and even to suspect, the representations made to him by those who were desirous that he should leave it to time,

tonianæ, p. 28.

went thither, which he meant to ripen and bring to perfection there (5). However, the contrary of this is very fully proved (6), by a knowing and intelligent writer, who has brought to light many remarkable passages relating to these times. The truth seems to be, that the Earl of Essex found himself not able to perform any great matters in that kingdom, and was at the same time kept there by the Queen's express command. It is very likely that it was this that put him upon his treaty with Tyrone, and afterwards induced him to form that desperate design, of landing with two thousand men at Milford Haven, from which it was with some difficulty he was dissuaded by the Earl of Southampton and Sir Christopher Blount. It is not at all probable that Mr. Cuffe was so much as acquainted with, much less in any degree the author of, this scheme; for he was sent over in August with the Earl's letter to the Queen (7), a particular that seems to have been unknown to most of the writers upon this subject. But however he had not been long in London, before the zeal and diligence he expressed in his master's service drew upon him the resentment of some great persons, who gave bad impressions of him to the Queen, which occasioned his being sent for. This passage we learn from a letter written at that very time by Mr. Rowland White to Sir Robert Sidney, dated September 12, 1599, which runs thus (8): 'The unkindness between my Lord of Essex and Mr. Secretary is grown to extremity. I hear my Lord is infinitely discontented, and in his discontentment uses speeches that may be dangerous and hurtful to his safety. Mr. Cuffe hath had access to the Queen, who came of purpose marvellously well instructed to answer such objections as her Majesty could lay to his charge, and I hear that Cuffe hath very wisely behaved himself to her Majesty's better satisfaction.'

(9) This is Cuffe's own account of the matter, at his trial, in his confessions, and at his death.

[C] By any means, and at any rate.] This was from first to last the great point which Mr. Cuffe had in view. He thought that the Earl of Essex's friends were so numerous, and some of them of such high quality, that the method which the Cecilian party took to maintain themselves in power, might be so represented as to raise a jealousy in the Queen, who was very tender of her authority, and that if the Earl once came to her presence, and represented these matters with his usual eloquence, and was supported by the testimonies of those who were prepared to make good his charge, their business would be done (9). But without doubt, when he first thought of this method, he had no design of accomplishing it by force: that fell in afterwards, when experience had discovered that access could be had no other way. It is true that something of this nature had been proposed to the Earl long before, when he was in Ireland: but he rejected it, and foreseeing that it might be objected to him when his conduct was called in question before the Privy Council, he set down an answer to this charge in the brief notes that he made for his defence, the substance of which is preserved by a grave Historian (10). It is therefore most probable, that when force came again to be thought of, it was originally moved by the same person that first hinted it, and that was Sir Christopher Blount, who had married the Earl of Essex's mother. This seems also to be clearly proved by the Earl of Essex's confession, who charged that Gentleman with giving him such advice (11). Upon the whole, therefore, we have good reason to believe, that at first these were two distinct designs, and that Mr. Cuffe founded all his hopes in the enlarging and increasing the Earl's faction, by taking in malecontents of all parties and of all religions, but more especially by drawing to him such great men and Ministers, as were known either to fear Secretary Cecil's resentment, or to envy his greatness; in pursuance of which scheme Mr. Cuffe not only acted vigorously himself, and engaged the Earl in the like schemes, but prevailed upon him to employ others in the prosecution of that design, which went so far as to alarm the Court very much: nor is it at all improbable, that if it had been managed with more temper and discretion, and without giving such visible occasions of questioning the Earl's dutiful intentions, it might have been brought to end otherwise than it did, the Earl having most part of the city, and not a few at Court, on his side. But it was that Nobleman's misfortune, that with very great parts he had very great weaknesses. He was certainly a man of principle, as well in regard to policy as religion; but as he had very strong passions, and those kept constantly inflamed by his followers on one side, and his enemies on the other, there was little of steadiness in his proceedings. He sometimes embraced the sentiments of Lord Henry Howard, afterwards Earl of Northampton, and of his Court friends; but this method proving slow, he came, as it is said in the text, to dislike that, and fall in with Cuffe's counsels, who suspected the sincerity of the Courtiers, and thought to make his Lord formidable, by placing him at the head of a numerous party. But this too not answering in so short a time as his desires, and indeed his occasions, required, Sir Christopher Blount's project was brought again upon the carpet, and thus, by only approving the best, and pursuing the worst counsels, this Nobleman ruined himself and all who were attached to him.

and

and the Queen's known regard for him, to overcome the ill impressions she had received; and not, by a hasty resuming of his former popularity, beget new grounds of distaste, and afford his enemies fresh opportunities of insinuating things to his prejudice, the only method which, as they persuaded him, could hinder his coming once more into favour and power (t). Yet, as much as the Earl liked the zeal and affection of his Secretary, and notwithstanding he delighted very much, as indeed he very well might, in his conversation, since he had a wonderful facility of applying all that he had learned from books to business, and of suiting the wise observations of ancient authors to the transactions of modern times (u); yet, his Lordship was but too well acquainted with the nature of Courts, and more especially that he had to deal with, to regard Mr. Cuffe's political reflections as oracles, which the other observed, and took amiss. This led him to shew the Earl, that he was not so far addicted to him as not to see his blind side; for that his submission, when called before the Lords of the Privy-Council, had sunk his character very much without raising his fortune at all; that, by admitting his own conduct in Ireland to be wrong, he, in effect, acknowledged all the proceedings against him to be right; and therefore, if he meant not to lead a life of dependance, he must think of recovering his reputation by some distinguished action (w). This roused the Earl, whose parts were certainly very good. He saw at once the danger of such advice, and the destruction that must attend his following it; for which reason he not only rejected it with disdain, but ordered Sir Gelly Merrick to discharge the Secretary immediately from his service, which, if he had done, some writers seem to think both their lives had been by it preserved. So it was however, that Sir Gelly Merrick took no notice of this order, which omission cost him his life also. The reason he gave for it was, that he was afraid Mr. Cuffe might be tempted to join with his Lord's enemies; but his real motive was, his agreeing in Cuffe's sentiments (x). However, this produced a coldness, which lasted for some time. But the Queen denying to renew the Earl's grant for farming the sweet wines, and some other mortifications which he received from Court having again soured his temper, he called Mr. Cuffe back to his Councils; to which he might be possibly induced for the sake of managing better a new design he was upon, which was interesting King James in his favour, or, rather, labouring to persuade that Prince of his cordial affection to his service: a thing not a little suspected before, as appeared by the Jesuit Parsons's dedicating to his Lordship his dangerous book about the Succession, which he had published under the name of Doleman (y). This scheme was certainly a better one than the former, and there is some reason to believe that this also was Cuffe's, and was, for some time, pretty well managed. But such was the heat of some of their associates tempers, that they would not suffer the Earl to wait for the good effects that project might have produced. On the contrary, they were continually infusing into him his danger of becoming a beggar, upon the expiration of his grant for the sweet wines; in consequence of which his friends would drop off, and he must entirely lose that credit and influence which had hitherto made him dreadful to his enemies, even under the weight of his misfortunes (z). By degrees these insinuations prevailed so far upon the Earl's mind, that he departed entirely from his scheme of submission, and returned to that sort of conduct which he had pursued in Ireland, directing, or at least allowing, Sir Gelly Merrick to keep a kind of open table for discontented and factious persons of all parties, though he did not appear in person, or converse with any of them, agreeably to one of Cuffe's maxims, *That it was good to have a multitude at his back, but few heads in his council* (a). Upon particular occasions, and to afford them necessary instructions for the management of their respective parts in the maintenance of his association, the Earl of Essex conferred personally, but generally in private, with the principal Lords and Gentlemen of his party; yet without disclosing the whole extent of his views, or the means he intended to employ in order to carry them into execution: those were reserved for his secret council, and these, as far as we can discern, were Sir Christopher Blount and Mr. Cuffe, who suggested and directed, or at least examined, and gave their approbation, to all his proceedings (b) [D]. Amongst other schemes set on

[D] Or at least examined and directed, and gave their approbation to all his proceedings.] We have in the text, upon the authority of a grave and great Historian, given an account of the motives upon which the Earl of Essex dismissed Mr. Cuffe (12), and how the measure came to prove abortive; but the tale is quite otherwise told by a very polite writer, and one who asserts he had it from good authority. His story is worth the reading, it runs thus (13): 'There was amongst the Earl of Essex's nearest attendants, one Henry Cuffe, a man of secret ambitious ends of his own, and of proportionate counsels, smothered under the habit of a scholar, and slubbered over with a certain rude and clownish fashion, that had the semblance of integrity. This person, not above five or six weeks before my Lord's fatal irruption into the

city, was, by the Earl's special command, suddenly discharged from all further attendance or access unto him, out of an inward displeasure then taken against his sharp and importunate insinuations, and out of a glimmering foresight, that he would prove the very instrument of his ruin. I must add hereunto, that about the same time my Lord had received from the Countess of Warwick (a Lady powerful in the Court, and indeed a virtuous user of her power) the best advice that I think was ever given from either sex, That when he was free from restraint he should closely take any out-lodgings at Greenwich, and sometimes, when the Queen went abroad in a good humour, whereof she would give him notice, he should come forth and humble himself before her in the field. This counsel sunk much into

foot at this time by Mr. Cuffe, for the support of the Earl's interest, there was one which shewed him a true politician, a great master in the knowledge of human nature, and a man equally capable of contriving with the utmost sagacity, and executing with the greatest address. Sir Henry Nevile, who had been the Queen's Ambassador in France, and who had shewn himself, in a long and troublesome negotiation, as active and able a Statesman as those times had produced, was then at home, and under a kind of a court cloud, which, though he was nearly related to Sir Robert Cecil, he had some cause to suspect was of his raising; or, at least, he thought he had good grounds to be displeased, that, by his known power and interest, it was not dispelled (c). Upon the discontents of this great and wise Minister, Mr. Cuffe thought it practicable to work; and, though he had never any nearness with the Earl of Essex in his greatest prosperity, or the least correspondence with him since his troubles began, yet Mr. Cuffe, who knew with how great efficacy the associating so great a person, and of such high reputation for his sagacity in their designs, would operate in favour of the Earl's cause, undertook to bring it about, and, against all shew of probability, succeeded (d). He took an opportunity of insinuating to Sir Henry, that, after the Queen, his mistress, the nation in general, and the Ministry in particular, had received many and great advantages from that vigilance and industry with which he had managed public affairs in France, and elsewhere; instead of receiving suitable rewards, exceptions were taken to his conduct, and himself put under difficulties and hardships, by the intrigues of Cecil, who was jealous of every man whose services were greater, and whose parts were better, than his own. By these suggestions he wrought himself so thoroughly into the confidence of Sir Henry Nevile, that he brought him to have a good opinion of the Earl his master's intentions for the public service; and this may be justly esteemed the most eminent stroke of Cuffe's politicks, and the highest proof of his abilities (e). His perfect intimacy with the Earl, the great likeness of their tempers, his entire knowledge of his affairs, might very well account for the ascendancy he had over him; but nothing of this, a very long acquaintance excepted, can be suggested with regard to Sir Henry Nevile; so that his interest with, and influence over him, could be ascribed to nothing but his abilities (f) [E]. We now come to the main point of the conspi-

(c) Winwood's Memorials, vol. i. p. 271.

(d) See Sir Henry Nevile's case, in Winwood's Memorials.

(e) Collected from Sir Henry Nevile's own relations of this matter.

(f) Mr. Cuffe valued himself highly upon this at his trial.

into him, and for some days he resolved it; but, in the mean time, through the intercession of the Earl of Southampton, whom Cuffe had gained, he was restored to my Lord's ear, and so working advantage upon his disgraces, and the vain foundation of vulgar breath, which hurts many good men, spun out the final destruction of his master and himself, and almost of his restorer, if his pardon had not been won by inches. True it is that the Earl, in Westminster-Hall, did in general disclose the evil persuasions of this man: but the particulars which I have related, of his dismissal and restitution he buried in his own breast, for some reasons apparent enough. Indeed, as I conjecture, not to exasperate the case of my Lord of Southampton, though he might therewithal a little peradventure have mollified his own. The whole and true report I had by infallible means, from the person himself that both brought the advice from the aforesaid excellent Lady, and carried the discharge to Cuffe, who, in a private chamber, was stricken therewith into a swoon almost dead to the earth, as if he had fallen from some high steeple; such turrets of hope he had built in his own fancy! The noble Historian, who, in his junior years, considered the subject upon which the author wrote whom we have last mentioned, though he mentions him but very slightly, yet affords Mr. Cuffe quite another kind of character, and makes him to have been a much better Courtier than his master, one who observed it as a fault in him, i. e. the Earl of Essex, that he wore his passions in his countenance, that his affections or his anger were always to be read in his looks, and that he knew not how to conceal either. The noble writer's words deserve our notice. After shewing that there is a sort of dissimulation absolutely necessary in a Court, he proceeds to shew (14), how indifferently Essex was furnished in that particular; 'how ill, says he, the Earl was read in this philosophy, his servant Cuffe (whose observations were sharp enough, whatever Stoicisms raved in his nature) well discerned when he said, *Amorem* ' *odium, semper in fronte gessit, nec celare novit.*

[E] So that his interest and influence over him, could be ascribed to nothing but his abilities.] It was from a long and intimate acquaintance with Sir Henry Nevile, that Mr. Cuffe undertook to manage so dange-

rous and so intricate an affair with him. This we learn from Mr. Cuffe himself, who, at his trial, was very much provoked by the Attorney-General's treating him as a messenger from the Earl of Essex; and this induced him to tell the Court, that he was no such Mercury as Mr. Attorney was pleased to make him, but that in whatever he transacted with Sir Henry Nevile, he behaved as a principal, and as a common friend to the Earl and to the Knight (15). (15) State Trials, vol. vii. p. 59. Indeed this is sufficiently corroborated by the account given of this matter by Sir H. Nevile, which was read at Cuffe's trial, and what he had asserted is clearly confirmed. It was conceived in the following terms, allowing for the inaccuracy of the transcribers (16). (16) Ibid. p. 47. 'At his (Sir Henry Nevile's) arrival out of France, he was told that he had ill offices done him in Court by divers, and some of great place, and his actions at Bullen and carriage there greatly blamed, as causing the ill success of the peace. And by Cuffe it was told him, the Earl would have him know he was wronged, because he was one that loved him. After this Cuffe brought him a letter from the Earl, thereby desiring his love, and to hold it to him, besides many other words only of compliment. To which letter he returned an answer suitable to so kind provocations: but all this while he never went to him; and being in the country within ten miles of the Earl, yet never went to visit him. But Cuffe came to him from the Earl and told him, the Earl was then at liberty, and all the world that would might then freely come unto him: but still he put off his going, till, at one time, Cuffe came and told him, the Earl expected his coming to him, and such a day he would stay supper for him, and that if he came, and Cuffe chanced not to be in the way, a Gentleman of the Earl's should attend his coming, and bring him to the Earl's closet. About eight of the clock that night he went to the Earl's, and was met by a Gentleman who brought him to his Lord, who entertained him kindly, and after a while, after many questions of his hopes, but used no undutiful words of the Queen or State, he parted with the Earl, there having nothing but ordinary terms of compliment passed between them. Afterwards, Mr. Cuffe repairing often to him, he asked him at times how his Lord's matters stood in Court. At one time

(14) Disparity between the Duke of Buckingham and the Earl of Essex, written by the Earl of Clarendon.

conspiracy, or that design laid for restoring the Earl's power and greatness, which ended in his own, and in his followers ruin. Here it is necessary to distinguish between Mr. Cuffe's scheme, which was contrived and never executed, and the unfortunate Earl's project, which, if I may be allowed the expression, without being thought to play upon words, was executed without any contrivance. As to the first it was this: Mr. Cuffe perceiving that the Earl had many friends, some of them of great rank and quality, and that Cecil, and his associates in the Ministry, had likewise many enemies, who were also persons eminent by their birth, fortune, and influence, he thought that, by uniting these, and procuring, some way or other, access to the Queen, a change might be made in the management of public affairs, at least in her name, if not by her consent, and the Earl thereby raised to a degree of power equal to his friends wants, and his own wishes (g). Whether this sudden change for the present, was to have derived a future support, by a declaration in favour of the King of Scots claim to the succession, or whether that was to be left to farther consideration, is a point we want lights sufficient to determine; but, that this was really the basis of Cuffe's project, and that he flattered himself it would not come within the legal construction of treason, is what we have good grounds to believe, and, indeed, sufficient authorities to prove (h). When things were thus far brought into order, a resolution was taken, that a general and solemn meeting should be had at Drury-House, where the chiefs of the party might see each other, where they might have a full communication in reference to their strength, and come to some resolution as to the attempt that should be made, and the safest and most feasible method of making it. After much reflection and consideration, February 2d, 1601, was fixed upon, and, accordingly, upon that day, the Assembly was held at the place before-mentioned (i). It is very remarkable, that the Earl of Essex himself was not present, to prevent, as was said, any notice or umbrage being taken at Court; but, in reality, that there might be no evidence to affect him for holding such an assembly, or those who were present at it for consulting with him, in case any thing relating to it should take air. At this assembly Mr. Cuffe was likewise not present, but all his friends, and at his request, and upon his earnest intreaty amongst the rest, Sir Henry Nevile. It was propounded there, that a few persons had got the Queen and the Government into their hands; that such as they disliked were no longer safe; that they daily suffered wrongs and oppressions, without any hopes of redress; that these proceedings were against justice and common right, and that the only remedy was, to obtain an audience of the Queen, in which these grievances might be fairly laid before her (k). After these preliminaries, the main point, How such an audience should be obtained, came under deliberation, and a scheme was then laid down for the Earl of Essex gaining access to her Majesty, and power enough to remove his enemies; but nothing was resolved in this assembly, though a list was produced of one hundred and thirty Lords, Knights, and Gentlemen of estates, that were ready to embark in the Earl's cause, and to hazard, as indeed many of them did, and lost too, for his sake, their lives and fortunes (l). Such was the design and issue of the conference at Drury-House, in which

• he answered him, well; and told him of great hopes
• conceived: at some other time he answered him
• very discontentedly in these things, saying it made
• no matter, it would cause the Earl to take other
• courses, and said there was a pretext to lay up the
• Earl of Southampton, which was a warning that
• they meant to lay up Lord Essex after him, but that
• the Earl was resolved they should never curb him up
• any more. Cuffe then told him, his Lord had in
• purpose some matters, but he should not embark
• himself further in them than he listed, and desired
• him to give a meeting to the Earl of Southampton
• and Sir Charles Danvers: he said he would, but
• with this limitation, that nothing was intended
• against the Queen's person, which was promised.
• But he detained them at two meetings, which caus-
• ed them to make an ill judgment of his meaning
• towards them and the intendment. Monday, on
• Candlemas-day, standing in Serjeants-Inn Gate, the
• Earls of Essex, Southampton, and Sir Christopher
• Blount, passed by in a coach, whom he saluted pas-
• sing, and was the first time he had seen them of
• long. Anon after, Cuffe coming to him, told him
• he had a commission to deliver a secret unto him,
• which was, that the Earl finding his life sought by
• men potent about her Majesty, he was advised to
• make his appearance to the Queen, and go with
• strength for that purpose, describing the same man-
• ner of taking the Court, and making way to the
• Queen, as before is set down by others. This
• Cuffe said he was to impart to him, as one in whose

• love the Earl was confident. The matters being
• propounded unto him, he made many objections,
• and put great difficulties in the execution, easy
• perfecting of things being promised; my answer
• was, *Multa sunt quæ non laudantur nisi cum aguntur*.
• When some persons were named for the actors, he
• objected that if many knew it, it would not be con-
• cealed; if few were used, it would not be performed.
• The Earl of Rutland being named for one, said,
• they would not trust him long before-hand, for if he
• knew it but two hours before he would tell. In
• conclusion, he was desired to think of the things
• propounded in case they were shewed unto him.
• Afterward Cuffe came to him, to whom he related
• all the speeches used in that conference, and told
• him he would not allow it, except they would con-
• jure and take an oath to attempt nothing against the
• Queen's person and against Mr. Secretary, he would
• never do nor consent to any thing, for he was nearer
• unto him, therefore they must, *duce pudicè*, spare
• him in that. Cuffe said to him they would only
• have him present when things were doing, and if
• it fell out so, that he should be hastened to dispatch
• into France before that time, he might defer it by
• feigning sickness. By their appointment he should
• have been Secretary. Further it is required, that
• he should have sent a Minister into London to find
• how the city stood affected to the Earl. Cuffe fur-
• ther told him of a buz in many mens mouths in
• London, and that there had been warning given to
• the Mayor and Aldermen to look to the city, but
• of

which Mr. Cuffe had so deep a share, as well in the managing as in the contriving [F]. There was a second meeting some time after, to which Mr. Cuffe used many intreaties with Sir Henry Nevile to come, but he absolutely refused; nor would he listen to what was proposed, of an interview with the Earl of Essex, from a supposition that he was unwilling to trust himself where there were so many people present; but, in reality, he had already heard much more than he was inclined to hear, foresaw but too clearly the consequences of the former meeting, though he was unwilling, as a man of honour, to betray those who had trusted him, as well as a man of too much sense to trust himself in such a company again (m). Things were now so far advanced, that it was thought dangerous to go back, at the same time that there was no safety in going forward. A great resort of company there was to Essex-House, and, to cover this, the mask of religion was used, the Earl pretending that he sought no relief but from spiritual comforts; and, for this reason, he had frequent sermons there; and indeed many of the Clergy in the city ventured to pray for him, and for his preservation; which, all things considered, was a very strange thing (n). It is not to be supposed, that the Court was asleep all this while, or that Sir Robert Cecil, and his friends, should have so growing and dangerous an evil in their neighbourhood, without being apprised of it, or providing for their own safety. There is very good reason to believe, that they were not either inattentive or ill-informed, and that having mustered, in their own opinions, the whole force of the Lord Essex's party, they grew convinced, that any step, tending to open force, must end in his destruction. They therefore, to quicken him, took a variety of methods of shewing their contempt of his interest, and suffered those who had personal quarrels with his friends to insult them (o). Though this went to Essex's heart, yet he was irresolute, as not being able to draw together a number of persons sufficient to execute the scheme that had been talked over at Drury-House. But while he delayed, in hopes of collecting strength, his enemies, having provided for the total dissipation of his schemes, determined not to let him linger any longer; and therefore a message was sent him on Saturday the seventh day of February, from Secretary Herbert, to attend him, which he excused, on the score of his indisposition; and this, as it was foreseen it would, forced him to break out, as he did the next day, with all the force that he could collect; but being dissuaded from attempting the Court, and failing of that assistance he expected in the city, he, and all that were with him in Essex-House, were obliged to surrender themselves prisoners (p). By this sudden reverse of fortune, Mr. Cuffe found himself in the most wretched condition possible; for the Earl of Essex being tried and condemned on the 19th of February, and being solicited by the Divines who attended him while under sentence, not only confessed matters that were prejudicial to Mr. Cuffe, and gave those confessions under his hand, but likewise charged him to his face with being the author of all his misfortunes, and the person who principally perswaded him to pursue violent measures (q). Sir Henry Nevile also being involved in this unhappy business, charged Mr. Cuffe with being the person who invited him to the meeting at Drury-House, but very modestly, and without any circumstances of aggravation (r). He was brought to his trial on the fifth of March following, and defended himself with great steadiness and spirit (s) [G]. He was, however, con-

victed;

‘ of twenty-four Aldermen he doubted not of twenty ‘ at least.’ It is evident enough that this narrative was but indistinctly taken. However it is the best we have, and comes home to the point it was brought to prove, that Sir Henry Nevile had a great confidence in Cuffe, and that it was chiefly from this he was drawn to meddle in the affair.

[F] *In which Mr. Cuffe had so deep a share, as well in the managing as in the contriving.* There is one point left much in the dark in the last note, which therefore should be explained in this. It is confessed that Sir Henry Nevile was privy to the proposals made, and the resolutions taken, in the consultation at Drury House, and it was for his knowledge of them, and for that only, that Cuffe died: it is requisite therefore that the reader should be acquainted with what those propositions were, and this he shall be told with all the succinctness possible (17). Sir Christopher Blount was, with a choice detachment, to possess himself of the Palace Gate; Davis was to seize the Hall; Danvers the Guard-Chamber, which was but slightly watched, and the Presence-Chamber; and Essex was to rush in from the Meuse, which were stables belonging to the Court, with a select party at his heels, and to beg the Queen on his knees to remove his adversaries from her presence, to bring them upon their trial, and then to call a Parliament and make a change in the government. This most certainly was not originally Mr. Cuffe's scheme, but was made up of his and Sir Christopher Blount's blended together, and to which, in the end, Mr. Cuffe

was brought to assent, as the only one that was practicable. Of this it was that Sir Henry Nevile gave his opinion, that some things were not to be applauded till they were achieved, and of this it is not improbable, that he gave some hints to the Court, at least something like this was said by Secretary Cecil at Cuffe's trial. We now see the very depth of this affair, and in what manner, and by what degrees, Mr. Cuffe plunged into this treasonable abyss, out of which, though there were some who escaped, yet it is generally thought that they left the best part of their estates behind them.

[G] *And defended himself with great steadiness and spirit.* When the Attorney-General Coke opened a charge against Mr. Cuffe, he did it with all that violence which was so natural to him (18): he told him that he was the errantest traitor that ever came to the bar; he was *polypragma*, the very seducer of the Earl, and added, that, since he was a scholar and a sophister, he would frame him a syllogism, and bid him deny which part he would. The syllogism was this, Who-soever commits rebellion intends the Queen's death, but you committed rebellion, *ergo*, you intended the Queen's death. After abundance of other hard sayings he enters into the charge, but without producing any witness, or any kind of proof, excepting the confession of Sir Henry Nevile, and the stories that Secretary Cecil was pleased to tell upon the Bench, of the confessions of the Earl of Essex and of the Earl of Southampton, all which were in this general manner used as evidence that Cuffe was the great framer and

manager

viſited; and, as he was looked upon as the principal author of this fatal buſineſs; conſidered as a man of dangerous capacity; and having had no ſort of intelligence with thoſe that were then in favour, he was, with Sir Gelly Merrick, executed at Tyburn, March 30th, 1601, and died with great conſtancy and courage (t) [H]. His character has been
harſhly (t) Stowe's Annals, p. 795.

manager of all theſe dangerous deſigns. At length, Mr. Cuffe being allowed to ſpeak for himſelf, ſaid, 'the matters objected againſt him were many, and urged againſt him with all force of wit; therefore, for the help of his weak memory, he would reduce all unto two heads, things plotted, and things acted. For the firſt of them, Mr. Attorney thinks he hath concluded me in mood and figure, but my answer is, that if a man may be excuſed of treaſon by committing nothing, I am clear. Yet the number of matters heaped upon me, and the inferences and enforcements of the ſame uſed againſt me, to make me odious, make me ſeem alſo as a monſter of many heads in this buſineſs. But ſince by the law all accuſations are to be believed, and facts weighed, as by evidence they are proved, and things are beſt proved being ſingled; I will beſeech Mr. Attorney, that we may inſiſt upon ſome point certain, and not, as in a ſtream, have all things at once brought upon me with violence. For my being in Eſſex Houſe the Sunday, I hope it ſhall be conſtrued as in the caſe of others. Then, if thoſe who only had their being within the walls of that houſe, and no hand nor head in that action, were not traitors, I hope, that in favour and in charity, you will accordingly judge of me, who ſpent all that day locked up in my chamber amongſt my books, and never appeared unto any man till all was yielded up to my Lord Admiral. To conclude me to be a traitor, becauſe I was in the houſe where treaſon was committed, by the ſame reaſon, if a lion had been there locked up in a grate, he had been in caſe of treaſon. But whereas your argument, Mr. Attorney, is this, that whoſoever intends treaſon, and the ſame is afterwards acted by others, there the intender, as well as the actor, is a traitor; but I intended treaſon, and others acted it, *ergo*. Mr. Attorney it is not your *major* that I deny, becauſe my Lords the Judges have determined that, but I deny your *minor*. For if the thing intended was the going to the Court, yet the thing acted was the going into London.' But Mr. Attorney-General taking him ſhort upon his own confeſſion, concluded him a traitor, for in treaſon the very intent is treaſon, if the ſame can be proved. Now it is confeſſed by Mr. Cuffe, that he intended the taking of the Court, which in itſelf is treaſon. Mr. Cuffe ſaid, 'My Lords, the matters forced upon me ſo amaze me, as I know not what to ſay: but I beſeech you, even as yourſelves ſhall be judged, judge ſo of me both by my words and deeds, for this is the law both of God and man; and let not the accuſations of others, or arguments now forced ſo far, have power againſt me, as to take from me my juſt defence. I am further charged with contriving plots for reſtoring the Earl to greatneſs. True, I muſt confeſs, as a ſervant that longed for the honour of his maſter, I have often wiſhed to ſee his recalling to the Court, and reſtoring to her Maſteſty's former favour, but beyond the limits of theſe deſires my thoughts never carried me, nor aſpired to other greatneſs, than to ſee him again in place of a ſervant and worthy ſubject as before he had been. And whereas I ſtand accuſed to be as one that turned the wheel, which elſe had ſtood, and to be the ſtirrer of his mind, which otherwiſe had ſettled to another courſe; to clear this I had written two lines, which you, Mr. Secretary, knew the Earl would have ſubſcribed if he might have been ſuffered.' But Mr. Secretary affirmed, he perceived no ſuch purpoſe in the Earl, neither remembered any ſuch matter in that which was written. Said Cuffe, 'You know, Mr. Secretary, my paper being read to the Earl as he read, he ſaid, ſtill as he went, *true, true*.' At the importunity of Mr. Cuffe, Mr. Secretary willed the paper ſhould be read, but it tended only unto this, that if he knew of the Earl's intent to go to the Court, it was with ſuch limitations as the Earl had propounded, otherwiſe not, for he had not ſuggeſted any

of theſe new practices. Mr. Attorney, to cut ſhort this defence, began his reply with telling him, 'Come Mr. Cuffe, I will give you a cuff ſhall ſet you down;' and then ordered part of the Earl's and Sir Henry Nevile's confeſſion, to be read. Mr. Secretary Cecil then queſtioned Mr. Cuffe, What was meant with reſpect to a Parliament? to which he answered that if theſe ſchemes had ſucceeded, many alterations would have followed, and that, for the ſettling of things, a Parliament might then have become neceſſary. Mr. Attorney-General was pleaſed to inform the Court, that, in that Parliament, Mr. Cuffe was to have been Speaker. The Jury found him guilty, in which Mr. Cuffe ſaid that they had done but right in diſcharging their conſciences; he took notice, that when he was ſeized he had but two ſhillings about him, but that there were three hundred and fifty pounds in ready money taken in his chamber; he ſaid, that, upon his being firſt carried to the Tower, he was put into a very bad place, but that he was afterwards removed into a better, where he deſired to continue, which was afterwards granted; he farther requested, that he might have a Divine ſent him, and be allowed the uſe of pen, ink, and paper, which were alſo promiſed. Mr. Camden, in his account of Cuffe's trial, ſays (19), that the Lord Chief Juſtice Anderſon, told both the Attorney General and Mr. Cuffe, that they were but indifferent diſputants, and preſſed the ſtatute of treaſon, by which Cuffe was concluded, ſince it appeared that he was acquainted with what paſſed in the conference at Drury Houſe, and the propoſal of putting the Queen under a force, and ſhewed his approbation of it by citing, in converſation, to Sir Henry Nevile, a paſſage from the poet Lucan, implying, that where juſtice is denied, it might be obtained by force:

— Arma tenenti
Omnia dat, qui juſta negat.

Mr. Fuller, who affects to treat every ſubject merrily, ſays (20), humorouſly enough, that this might be ſtiled Mr. Cuffe's *neck-verſe*, in which how improperly ſoever he ſhews his wit, yet certainly he ſhews his judgment at the ſame time, for without doubt the quoting theſe verſes was the higheſt treaſon that Cuffe committed, and the only proof that he conſented to the project of putting a force upon the Queen, which, in the conſtruction of the law, was treaſon; yet this is ſo far from being proved by two witneſſes, that it could only have been proved by one, and even he was not produced. Such, in compariſon of thoſe in which we live, was the juſtice, or rather ſeverity, of former times.

[H] And died with great conſtancy and courage.] It was an obſervation of Secretary Cecil's, that Cuffe was as ſilent under his miſfortunes, as his maſter was open. Indeed there was ſomething very extraordinary in the Earl of Eſſex's behaviour; for, when he once began to confeſs, he charged every body that had any kindneſs for him, as having a hand in his plot; ſuch as the Lord Montjoy, his ſucceſſor in Ireland, and many others; ſo that the very number of them rendered a proſecution unſafe, which is a farther proof that Cuffe's original ſcheme might have ſucceeded, had it been coolly and carefully purſued. The Earl, to prove his ſincerity, deſired to ſee Mr. Cuffe, whom he exhorted to confeſs, as he did, with many paſſionate expreſſions, adding at laſt (21), 'I muſt tell you plainly, that this inſtance of diſloyalty is purely owing to your advice.' Mr. Camden tells us, that Mr. Cuffe was ſurprized at this, and in few words, but to the purpoſe, charged the Earl with weakneſs and levity in betraying his friends (22). This was before Mr. Cuffe's trial, and how handſomely he acted thereat has been already ſhewn. At the place of execution all writers agree, that he behaved with the utmoſt reſolution, and the moſt ſteady compoſure.

harshly treated by Lord Bacon (u) and Sir Henry Wotton (w), and some other writers. Camden also, who knew him intimately, and had lived for many years in great friendship with him, bestows on him a short but bitter reflection. Others are milder in their censures, and all allow him to have been a very learned and very able man. He wrote a book in English, that was printed after his death several times, and has been much commended (x): and, besides this, there is another work of his that was never printed, of both which we shall give some account in the notes [I]. The course of his life, as well

(27) Osborn's
Advice to his
Son, P. i. cap. iv.

He delivered himself, upon this melancholy occasion, in the following words: 'I am brought hither to pay my last debt to nature, and to suffer for crimes committed against God, my Prince, and my country; and as I cannot but discern the infinite justice of God, when I reflect on the multitude of my offences, so can I as little doubt but the severity of my punishment will make way for my admission into the embraces of his mercy. We are exposed here as sad spectacles, and instances of human frailty: the death we are to undergo carries a frightful aspect, (for even the best of men desire life), besides that 'tis as full of ignominy as terror. However, 'tis the portion of the best of saints, with whom I assuredly hope to rise again in Christ. Not that I would be thought by any one to depend upon my own merits, which I absolutely discard, but I place my entire trust and dependance in the atonement of my Saviour's blood. I am fully persuaded, that, whoever feels a secret consolation within himself whilst he groans under the infliction of any earthly punishment, is chastised by God with a paternal tenderness, and not in an angry and judicial way. But to come to the cause of my death. There is nobody here can be possibly ignorant, what a wild commotion was raised on the 8th of February, by a particular great, but unadvised, Earl. I do here call God, his angels, and my own conscience, to witness, that I was not in the least concerned therein, but was shut up on that whole day within the house, where I spent my time in very melancholy reflections.' Here he was interrupted, and advised not to disguise the truth by distinctions, nor palliate his crime by specious pretences. Then he proceeded in these words: 'I confess 'tis a crime as black as treason, for a subject, who has lost his Prince's favour, to force his way to the royal presence. For my own part, I never persuaded any man to take up arms against the Queen, but am most heartily concerned, for being an instrument of bringing that worthy Gentleman, Sir Henry Nevile, into danger; and do most earnestly intreat his pardon: and whereas I said, that one and twenty Algermen out of the twenty-four were devoted to the Earl's interest, I only meant that they were his friends, and ready to serve him, but not in the way of open rebellion.' Here he was again interrupted, and so began to apply himself to his devotions, which he managed with a great deal of fervour, and then, making a solemn profession of his creed, and asking pardon of God and the Queen, he was dispatched by the executioner. A man, says Camden, of most exquisite learning, and of a penetrating, but seditious and crooked, wit (23). *Ver exquissima doctrina, ingenioque acerrimo, sed turbido & tortuoso.*

(23) Camd. Ann.
Eliz. p. 868.

[I] Of both which we shall give some account in the notes.] As for Mr. Cuff's book, it was, for some time after his decease, handed about at Oxford in manuscript, and considered as a very great curiosity. Mr. Anthony Wood tells us, he wrote it in the year 1600, that is, a very little before his death. About six years after it was printed under this title:

The Differences of the Ages of Man's Life, together with the original Causes, Progress, and End, thereof. Written by the learned Henry Cuffe, some time Fellow of Merton-college in Oxford. Lond. 1607, 1638, 8vo; 1640, 12mo. There is something in this piece very curious and philosophical; and though, at this time of day, what between our proficiency in experimental philosophy, in which he was but a beginner, and the uncouthness of his stile, which was the fault of his time, much of the beauty of his work is lost; yet the strength of his thoughts, the accuracy

VOL. IV.

of his method, and his connected manner of reasoning, leave no reason at all to doubt, that he deserved the commendations that have been bestowed upon him. Mr. Wood says (24), that he left behind him many other things ready for the press, which were never published; but he does not think fit to tell us any of their titles. All that we can supply from the enquiries of the indefatigable Bishop Tanner, is the following title of one piece, and the place where it is, or at least was once, to be found (25):

De rebus gestis in sancto concilio Nicæno, or, 'The Transactions in the Holy Council of Nice, translated out of Greek into Latin,' and is believed to have been the work of Gelasius Cyricenus, which was transcribed from the original in the Vatican Library, by Henry Cuffe (26). We will conclude this note with the judicious and salutary reflection of a celebrated author, upon the uneasy life, and unfortunate death, of this extraordinary person of whom we have been speaking, which teaches the use of these kind of Histories, and shews, that we may borrow as beneficial improvements from contemplating the lives of unhappy men, as from the perusal of the swelling memoirs of persons more indebted to Fortune for her favours (27). 'Mingle not, says he, your interest with a great man's, made desperate by debts or Court injuries, whose breakings out prove fatal to their wisest followers and friends, averred in the last Earl of Essex but one, where Merrick his Steward, and Cuffe his Secretary, though of excellent parts, were both hanged. For such unconcocted rebellions turn seldom to the hurt of any but the parties that promote them, being commonly guided by the directions of their enemies, as this was by Cecil, whose creatures persuaded Essex to this inconsiderate attempt.' C.

[*] From Dr. Birch's memoirs of the reign of Queen Elizabeth it appears, that Mr. Cuff was one of the Secretaries to the Earl of Essex so early as in 1606, and that he accompanied the Earl in his expedition against Cadiz. After the successful event of the expedition, Cuff was dispatched with his Lordship's letters to England, and, when he had landed, endeavoured, with the utmost speed, to arrive with them at the Court. Being, however, unfortunately taken ill on the road, he was obliged to send up the letters, inclosed in one of his own, to Mr. Reynoldes, another of the Earl's Secretaries. Mr. Cuff, agreeably to large instructions which he had received from his Lordship, had drawn up a discourse concerning the great action at Cadiz, which the Earl purposed to be published as soon as possible, both to stop all vagrant rumours, and to inform those, that were well affected, of the truth of the whole. It was, at the same time, to be so contrived, that neither his Lordship's name, nor Cuff's, nor any other person's, connected with the Earl, should either be openly mentioned, used, or in such a manner insinuated, as that the most slender guesses could be made, who was the penman. The publication was to have the appearance of a letter that came from Cadiz, and the title of it was to be, "A true relation of the action at Cadiz, the 21st of June, under the Earl of Essex and the Lord Admiral, sent to a Gentleman in Court from one that served there in good place." Sir Anthony Ashley, who was entrusted with the design, acted a treacherous part on this occasion. He betrayed the secret to the Queen, and the Lords of her Council; the consequence of which was, that Mr. Fulke Grevill was charged by her Majesty to command Mr. Cuff, upon pain of death, not to set forth any discourse concerning the expedition with-

well as the manner of his death, rendered him the theme of much discourse in his own times; and our general Historians have mentioned him in such a manner, as might have raised the curiosity of their readers, to be more particularly informed. The Reverend Mr. Fuller (y) has given him a place amongst his Worthies in Somersetshire; honest Anthony Wood (z) has treated him with great fairness and freedom; and the learned and industrious Bishop Tanner (a) has spoken of him, as indeed he does of every body, with great candour, accuracy, and decency. These authorities will sufficiently justify the giving his Memoirs a place in this collection, more especially as it has afforded an opportunity of setting several historical circumstances relating to a very dark and intricate affair, in a clear and true light. His death hindered not his limbs from being interred, though we are not able to say where; though the manner of it did, as it well might, deprive him of a monument. An old friend of his, however, ventured to embalm his memory in an Epigram (b), with which, being very short, we shall conclude:

Doctus eras Græce felixque tibi fuit Alpha
At fuit infelix Omega Cuffe tuum.

Which has been thus translated:

*Thou wast, indeed, well read in Greek!
Thy Alpha too was crown'd with hope;
But, oh! tho' sad the truth I speak,
Thy Omega proved but a rope.*

(28) Birch's Memoirs, vol. ii. p. 81, 82, 95.

out her privacy. Such was the state of the liberty of the press in those days. Nevertheless, matters were so managed by Mr. Anthony Bacon, that copies of the discourse were sent abroad, for the purpose of doing justice to the honour and reputation of the Earl of Essex (28).

In the first volume of the Annual Register, and the forty-third of the Gentleman's Magazine, the following remarkable speech is given, as the dying speech of Mr. Cuff. "I am here adjudged to die, for acting an act never plotted, for plotting a plot never acted. Justice will have her course; accusers must be heard; greatness will have the victory. Scholars and Martialists (though learning and valour should have the pre-eminence) in England must die like dogs, and be hanged. To mislike this were but folly: to dispute it, but time lost: to alter it, impossible. But to endure it, is manly; and to scorn it, magnanimity. The Queen is displeased, the Lawyers injurious, and Death terrible. But I crave pardon of the Queen; forgive the Lawyers, and the World; desire to be

"forgiven; and welcome death (29)."

There is a concise energy and spirit in this speech, which cannot fail of exciting the admiration of our readers; and, from its being so excellently suited to the genius and character of Cuff, it carries in it no small degree of internal evidence that it was actually delivered by him. We could have wished, however, that its authenticity had been particularly ascertained. This was the more desirable, as it does not accord with the speech that is given in note [H], and which appears to be founded on the best authority.

In the Epistolæ Francisci et Johannis Hotomorum, Patris et Filii, et clarorum Virorum ad eos, are several letters by Cuff, to John Hotman. These are said to exhibit distinguished marks of genius and learning; to be written in elegant Latin; and to contain some curious particulars. It was, therefore, our earnest desire to avail ourselves of them; but, after much enquiry, we were not fortunate enough to obtain a copy of the work. We hope to supply the defect on a future occasion.] K.

CUMBERLAND (RICHARD), a very learned Divine, and Bishop of Peterborough in the close of the last and beginning of the present century. He was the son of an honest citizen of London, who, by his industry, acquired a competent, though not a great fortune (a). This Reverend Prelate was born in the parish of St. Ann near Aldersgate, July 15th, 1632, though his father lived afterwards in Fleet-street (b). He received the first tincture of letters in St. Paul's School, under the care of Mr. John Langley (c), and was removed from thence to Magdalen-College in Cambridge, where he was contemporary with some very worthy and learned persons; such as Dr. Hezekiah Burton, his intimate friend and acquaintance, a very learned and pious Divine; Dr. Hollings, an eminent Physician at Shrewsbury; Sir Samuel Moreland, admired for his skill in the Mathematics; the celebrated Mr. Pepys, Secretary to the Admiralty; and the Lord Keeper Bridgeman, to whom himself, and his friend Dr. Burton, were Chaplains at the same time (d). He was very remarkable, while Fellow of his College, for his diligent application to his studies, as well as for the unaffected piety, and unblemished probity, of his life. It does not appear in what year this excellent person came to the University, but from circumstances it may be very easily collected, and we have reason to think it was in 1649 (e). He took his Bachelor of Arts degree in 1653 (f), and in 1656 he became Master of Arts (g), at which time he had thoughts of applying himself to Physic, which he actually studied for some time (h). He was incorporated Master of Arts in the University of Oxford, July 14th, 1657 (i). He went out Bachelor of Divinity at a public commencement at his own University, A. D. 1663, with universal applause (k). His first preferment was the Rectory of Brampton in the Deanery of Haddon, in the Archdeaconry and county of Northampton, which was given him by Sir John Norwich. The Patron was not disappointed in having a Clerk, who, in all respects, answered his highest expectations, and they lived together in the greatest unanimity (l). This worthy Gentleman was descended of a most antient and noble family, and was advanced to the dignity of a Baronet

ronet by King Charles the First. Brampton was his own parish, where he lived in great privacy and retirement. Mr. Cumberland was admitted December 3d, 1658, upon the demise of the Reverend Mr. John Ward (m); and after the Restoration, having never had the least scruple to the authority of the Church, he had a legal institution, and read the Thirty-nine Articles, as directed by law, November 24th, 1661 (n), and was, the same year, appointed one of the twelve Preachers in the University of Cambridge. This, however, was a temporary avocation only, owing to the high character he had raised by the masterly manner in which he had performed all academical exercises, and from which he quickly returned to the duties of his parochial charge. In this rural retirement he minded little else than the duties of his function, and his studies. His relaxations from these were very few besides his journies to Cambridge, which he made frequently, to preserve a correspondence with his learned acquaintance in that place. Here he thought to have remained, and here he might have remained during the course of his whole life, if his intimate friend and kind benefactor Sir Orlando Bridgeman, upon his receiving the Seals in 1667, had not sent for him up to London, made him his Chaplain, and soon after bestowed upon him the living of Alhallows in Stamford (o). He discharged the functions of his ministry in that great town with indefatigable diligence; for, besides the duties incumbent upon him by his parochial charge, he accepted of the weekly lecture, and, by this means, was obliged to preach three times every week in the same church (p). This difficult province he went through constantly and assiduously; and though this alone would have been a burthen too heavy for an ordinary man, he discharged it with so much ease, that he carried on at the same time great designs in his Philosophical, Mathematical, and Philological Studies. He gave a noble proof of this, and one which equally demonstrated the soundness of his morals, and the solidity of his parts, in publishing his *Philosophical Enquiry into the Laws of Nature*; a book deserving universal applause, and received with the applause that it deserved [A]. He was not in the least elevated with the praises

[A] And received with the applause that it deserved.] The title of this work at large runs thus: *De Legibus Naturæ Disquisitio Philosophica, in qua earum forma, summa Capita, Ordo, Promulgatio, & Obligatio rerum naturæ investigantur; quin etiam Elementa Philosophiæ Hobbeianæ, tum moralis tum civilis, considerantur & refutantur.* Londini 1672, 4to. i. e. 'A Philosophical Enquiry into the Laws of Nature, in which their Form, principal Heads, Order, Promulgation, and Obligation, are investigated from the nature of things; and in which also the Philosophical Elements of Hobbes, moral as well as civil, are considered and refuted.' This book was written while he was Chaplain to Sir Orlando Bridgeman, to whom it was dedicated, and there is prefixed to it a short Preface to the reader, by the author's friend and fellow Chaplain to the Lord Keeper, Dr. Hezekiah Burton. Dr. Cumberland being at a distance from the press when this book was published, it came into the world very incorrectly printed, and in subsequent editions these faults were multiplied in a very surprizing manner (1). We may hence form an idea of the excellency of a work, that could, notwithstanding, support its author's reputation both at home and abroad, and be constantly esteemed one of the best performances that ever appeared, and that too upon one of the nicest and most important subjects. Mr. Payne says very justly, that it was one of the first pieces written in a demonstrative way on a moral subject, and at the same time the perfectest (2). It is indeed on all hands admitted, that the Philosopher of Malmesbury was never so closely handled, or his notions so thoroughly sifted, as by Dr. Cumberland. He has however taken a new road, very different from Grotius, Puffendorff, and other writers, more difficult, and less entertaining indeed, but, at the same time, much more convincing. It was desired that a piece of such general utility should be made better known by being put into an easier method, and translated into the English language. This the author would not oppose, though he did not undertake it; being very sensible that the obscurity complained of by some, was really in the subject itself, and would be found so by those who meddled with it. The project however was pursued by James Tyrrel, Esq; grandson to the famous Archbishop Usher, who published his performance under the following title: *A brief Disquisition of the Law of Nature, according to the principles and method laid down in the Reverend Dr. Cumberland's (now Lord*

Bishop of Peterborough) Latin Treatise on that Subject; as also his Confutations of Mr. Hobbes's Principles, put into another Method, with the author's approbation (3). Mr. Payne, whom we have so often quoted, gives us a very honest and fair account of a design that he also had of the same nature. After mentioning the prejudice that this work had received from its ill usage at the press, he proceeds thus: 'This may have been some discouragement to the reading it, though the difficulty of the subject, and the closeness of the reasoning, has been a greater. Hardly any men hitherto have made themselves acquainted with the argument of it, but such as are in the uppermost form of learning. I have sometimes wished that his Lordship would have been pleased to have revised it, and tried to make it more easy and intelligible; but it had lain so long out of his hands, that he did not care to take it up again. He gave me leave to attempt any thing of that kind if I would, and as a help he gave me his own interleaved book, which has here and there a little addition. I read his book over and over diligently with this view, but never found where I could well alter any thing, where I could leave out, or where I could add. All I can think on to give a little advantage to common readers, is to print the book correctly, to give an Analysis of the argumentation, to add contents to each paragraph, and to divide them oftener. This I may perhaps find leisure to do (4).' It is not impossible, that the Rev. Mr. Payne might be diverted from this purpose of his, which certainly would have been very welcome to the learned world, by a like attempt made some few years after, while he was employed in publishing the Bishop's Posthumous Works, by a Reverend Divine of the kingdom of Ireland, who very probably never heard of his intention, or of the singular advantages he had, and which must have enabled him to perform it better than any other man. This last mentioned gentleman printed an English translation of our Prelate's book by subscription, under the following title: 'A Treatise of the Laws of Nature, by the Right Reverend Father in God Richard Cumberland, Lord Bishop of Peterborough; made English from the Latin by John Maxwell, A. M. Prebendary of Connor, and Chaplain to his Excellency the Lord Carteret, Lord Lieutenant of Ireland: To which is prefixed, an Introduction concerning the mistaken notions which the Heathens had of the Deity, and the defects in their Mora-

praises bestowed upon him, not only by the world in general, but by persons of the most distinguished merit and learning, upon the score of this excellent performance (q). He went on doing his duty with the same calmness and cheerfulness as before; and, in this station of a private Clergyman, so great was his reputation, that he was importuned by the University, and by other acquaintance, to take upon him the weighty exercise of responding at the public Commencement. Nothing but the earnest solicitation of his friends could have prevailed with a man, void not only of ambition but of even the desire of applause, to appear so publicly. This he did in the year 1680, in so masterly a manner, that, for many years after, the memory of his performance remained fresh in that University (r) [B]. The next specimen of his great abilities and profound learning appeared in the year 1686, in his *ESSAY on Jewish MEASURES and WEIGHTS*; a work written with the utmost sagacity, and in which qualities are discovered that seldom are found in the same mind, a deep penetration, extensive reading, a strong and accurate judgment, together with a candour seldom to be met with, and an unaffected humility, which, in conjunction with such talents, is truly admirable (s). It was a work not only highly useful in its nature, but very much wanted, and was therefore received with the highest applause by the best judges, who were equally pleased with the method and matter, as well as the manner and conciseness, of the performance. It was afterwards reprinted, and will continue to support the reputation of its author, as long as this kind of literature is either encouraged or understood (t) [C]. His sincere attachment to the Protestant Religion

(s) See this fully explained in the notes.

'Morality, whence the usefulness of Revelation may appear. At the end is subjoined an Appendix containing two Discourses, 1. Concerning the Immateriality of thinking Substance. 2. Concerning the Obligation, Promulgation, and Observance, of the Law of Nature; by the Translator. Lond. 1727, 4to.'

[B] *Remained fresh in that university.* These kind of exercises are common in the university, which, however, does not hinder their being performed with great strictness and punctuality; and, as this is always done before a numerous audience, composed of persons who are all of them proper judges, we may be satisfied, that whenever discourses are not only received with a temporary applause, but dwell upon the memory of such as hear them, and are talked of for many years after, they must have an extraordinary degree of merit to recommend them. The topics that were now handled by our learned and accomplished author, were equally weighty and important in themselves, and, at the same time, of a no less nice and delicate a nature, such as, demonstrating his zeal for the Church of England, must, at the same time, deprive him of any assistance from either of the two opposite factions, each of which, at that time, was known to have a considerable influence. The theses maintained by him were (5), 1. *Sancto Petro nulla data est jurisdictio in cæteros Apostolos; i. e. St. Peter had no jurisdiction granted him over the rest of the Apostles.* 2. *Separatio ab Ecclesia Anglicana est schismatica; i. e. The separation from the Church of England is schismatical.*

(5) *Item. ibid.*
p. 9, 10.

[C] *Is either encouraged or understood.* The title of his book at large runs thus: *An Essay towards the recovery of the Jewish Measures and Weights, comprehending their Monies, by help of an ancient Standard, compared with ours of England, useful also to state many of those of the Greeks, Romans, and Eastern Nations.* Lond. 1686, 8vo. The Dedication of this book to Samuel Pepys, Esq; then President of the Royal Society, is dated October 28, 1685, and from thence it may not be amiss to transcribe a paragraph or two, because they shew the reason why this piece was written. 'Because, Sir, the improvement of natural knowledge, for which the Royal Society was founded, may be attained, in some degree, by recovering some parts thereof which the Antients had, but are now unknown, I thought it not improper to present to you, who deservedly preside in that illustrious Society, this attempt to restore those eldest standards of measures and weights, which are mentioned in the most antient records, the Sacred Scriptures, as commonly known when they were written. But such hath been the ignorance and carelessness in these matters, of many intervening ages, by whose care these things should have been transmitted to us their posterity, that most of our late diligent enquirers have declared

their opinion to be, that though the retrieving of them be highly desirable, yet that success in such an endeavour is scarce to be hoped. Nevertheless, being desired by some learned Divines of our Church, in subserviency to some brief Annotations on the Bible, by them intended, to do the best I could in this affair, I have, by this treatise, attempted to rescue this most antient and useful piece of learning from the grave of oblivion and neglect, into which many despairing men were casting it, before it was quite dead, or past recovery. Learning I call this knowledge of weights and measures, because the first constitution of them, and the reason and proportions contained in their mutual correspondencies, do import not only prudent observation which is learning's foundation, but also some elements of Geometry, Arithmetick, and Staticks, which are essential parts of its superstructure, thence peculiarly called *μάθημα*, or, The Learning. And for this cause I have been forced, in the prosecution of this enquiry, to call in to my assistance some of the easiest mathematical notions, which are as old almost as mankind, associating thereunto some observations of nature, whose constancy, from the beginning, gives reason to believe, that they were known early by men, together with the eldest works of art, remaining in the pyramids, shekels, and other remains of Eastern and Western antiquity; that, from the concurrent evidence of these aged witnesses, I might be enabled to give this my verdict, which is now brought in before you.' We have no account any where of the Annotations, for the furtherance of which this discourse was written; but, from the friendship between their authors, and some other circumstances, I am inclined to think they were the Commentaries of Dr. Patrick, Bishop of Ely (6). In another part of his Dedication, our author observes to his patron, that nothing pleased him better, or gave him greater comfort in the prosecution of the difficult task he had undertaken, than that it related not to any quarrelsome interest, but the peaceable doctrine of measures and weights, which in their general nature are the common concern of all mankind, as being the necessary instruments of just dealing and fair commerce between all nations. He mentions also his own industry in avoiding all appearance of contention, which had led him so far as not to name the known diversities of opinion amongst men about this matter. All this, however, did not secure him from contradiction; for a certain writer attacked him, though without naming him (7), and our author wrote some sheets to justify his calculations: but his affection for peace was so great, that after all he laid them aside, and left his book to shift for itself, which it has done very well. A celebrated Journalist has given a very large extract of this work (8), which shews how much he esteemed it; as, on the other hand, that certainly

(6) Whose sentiments he mentions and defends in his posthumous works, in several places.

does

made him very apprehensive of its danger; and the melancholy prospect of affairs in the reign of King James made so deep an impression on this excellent person, as to contribute to a dangerous fit of sickness, one of the severest fevers from which ever man recovered. He continued after the Revolution in the same situation as before, and without any thoughts of soliciting for better preferment. Indeed, through the whole course of his life, this seems never to have entered into his head: he was always content with the lot that befel him, and applied himself, with the utmost vigour and diligence, to discharge his duty in that station where Providence had placed him (u). It was, therefore, a greater surprize to himself than to any-body else, when walking, after his usual manner, on a post day to the coffee-house, he read there in a newspaper, that one Dr. Cumberland, of Stamford, was named to the Bishopric of Peterborough. This piece of intelligence however proved true, and he had the singular satisfaction of finding himself raised to a Bishopric, not only without pains or anxiety, but without having so much as sought for it (w). This accidental, we ought rather to say providential, promotion, was highly honourable for him. It was looked upon, at that time, as a thing necessary to the establishment of the new government, that men, who were to be raised to such high stations in the Church, should be such only as had been most eminent for their learning, most exemplary in their lives, and firmest to the Protestant interest. Whilst these qualifications were only considered, such a man could not easily be overlooked, though he himself did least of any man look for such a promotion. The King was told, that Dr. Cumberland was the fittest man he could nominate to the bishopric of Peterborough. Thus a private country Clergyman, without posting to Court, a place he had rarely seen, without suing to great men, without taking the least step towards soliciting for it, was pitched upon to fill so great a trust, only because he was fittest for it [D]. He was elected in the room of Dr. Thomas White, who refused the new oath, May 15th; was consecrated, with other Bishops, July 5th; and enthronized September 12th, 1691, in the Cathedral of Peterborough (x). Thus in the sixtieth year of his age, when his parts were as strong as ever, his body unbroken with infirmities, and his experience at a just height, he entered on a new scene. He now applied himself to the work of a Bishop. Studious men acquire habits, that make them not overforward to put themselves out into action. The speculations of their minds employ the whole man. The natural calmness of his Lordship's temper added still to this disposition: yet no man took more care not to be defective in his proper duty. He made no omissions to consult his own ease, or to spare his pains; and the desires of his mind, that all under him should do their duty, were very earnest and sincere. His composition had no alloy of vain glory. He never did any thing to court applause, or gain the praise of men. He never acted a part, never put on a mask. His tongue and heart always went together. If he ran into any extreme, it was the excess of humility, the safest side for every Christian to err on. He lived with the simplicity and plainness of a primitive Bishop, conversed and looked like a private man, hardly maintaining, as the world calls it, the dignity of his character. He was not one that loved to have the pre-eminence, and he contended with nobody for prerogative and precedence. He used hospitality without grudging: no man's house was more open to his friends, and the ease and freedom with which they always found themselves entertained, was peculiar to it. The poor had substantial relief at his door, and his neighbours and acquaintance a hearty

does our author great honour, since, besides his being a very bold and free Critick, there was hardly any subject with which he was more thoroughly acquainted.

[D] Only because he was fittest for it.] What has been delivered in the text upon this subject is founded upon the authority, and expressed in the very words, of the Reverend Mr. Payne, a very competent and unsuspected witness to the truth of the facts which he has preserved, and which, but for his duty and gratitude, might have been lost to posterity. But notwithstanding the circumstances which relate to Bishop Cumberland rest upon his testimony solely, yet, as to his promotion in general, a certain Prelate, well acquainted with the politicks of those times, has given us a large account, which it may be the reader will not be displeased to see. The Bishop of Ely's (Dr. Turner's) Letters to St. Germans (9), says he, 'gave so fair an occasion of filling those Sees (whose Bishops would not take the oaths) at this time, that the King resolved to lay hold on it; and Tillotson, with great uneasiness to himself, submitted to the King's command: and soon after the See of York falling void, Dr. Sharp was promoted to it, so that those two Sees were filled with the two best preachers that had sat in them in our time; only Sharp did not know the world so well, and was not so steady

as Tillotson was. Dr. Patrick was advanced to Ely, Dr. More was made Bishop of Norwich, Dr. Cumberland was made Bishop of Peterborough, Dr. Fowler was made Bishop of Gloucester, Ironside was promoted to Hereford, Grove to Chichester, and Hall to Bristol, as Hough (the President of Magdalen's) was the year before this made Bishop of Oxford; so that in two years time the King had named fifteen Bishops, and they were generally looked on as the learnedest, the wisest, and the best men, that were in the Church. It was visible, that in all these nominations, and the filling the inferior dignities that became void by their promotion, no ambition nor Court favour had appeared; men were not scrambling for preferment, nor using arts, or employing friends, to set them forward; on the contrary, men were sought for, and brought out of their retirements, and most of them very much against their own inclinations. They were men both of moderate principles, and of calm tempers. This great promotion was such a discovery of the King and Queen's designs, with relation to the Church, that it served much to remove the jealousies, that some other steps the King had made were beginning to raise in the Whigs, and very much softened the ill humour that was spread among them.'

(9) Burnet's Hist. of his own times, vol. ii. p. 76.

welcome to his table, after the plentiful and plain manner in which he lived. Every thing in his house served for friendly entertainment, nothing for luxury or pomp. His desire was to make every body easy, and to do them good. He dispensed with a liberal hand to the necessities of others, though his contented mind made him require little for his own. His kindness to his relations and acquaintance that wanted it, the sums he parted with to such as were indigent, are deeds not proper to be proclaimed. Half such sums, distributed with ostentation by those who desire to have glory of men, would have gained the fame of great liberality and generosity. In these cases he truly observed our Saviour's precepts, to do his alms in secret, and even *not to let his left-hand know what his right-hand did*. His speeches to the Clergy at his visitations, and his exhortations to the Catechumens before his confirmations, though they had not the embellishments of oratory, yet they were fervent expressions of the inward desires of his soul to do what good he was able, and to excite others to be influenced by it; the pious breathings of a plain and good mind. On all occasions he treated his Clergy with singular regard and indulgence. An expression, that often came from him, was, *I love always to make my Clergy easy*. This was his rule on all applications made to him by them, and if he erred, it was always on this side. When the duties of his office required it, he never spared himself. To the last month of his life it was impossible to dissuade him from undertaking fatigues, that every body about him feared were superior to his strength. He was inflexible to their intreaties, and his answer and resolution was, *I will do my duty as long as I can* (y). He had acted by a maxim like this in his vigour. When his friends represented to him, that, by his studies and labours, he would injure his health, his usual reply was, *A man had better wear out than rust out*. The last time he visited his Diocese, he was in the eightieth year of his age: it was apprehended that he could not but suffer through the fatigues of it, though it pleased God he had no inconvenience from it. At his next triennial, when he was in the eighty-third year of his age, it was with the utmost difficulty that he could be dissuaded from undertaking again the visitation of his Diocese. To draw the Clergy nearer than the usual decanal meetings, to make his visitations easier to himself, was a thing he would not hear of. He would never take a burthen from his own shoulders to lay it on other peoples (z). Such were the public acts of this great Prelate, in the discharge of his duty as a Father of the Church. In respect to his temporal concerns, and his management of the revenue arising from his See, an account will be found in the notes [E]. His natural parts were not quick, but strong and retentive. He was a perfect master of every subject he studied. Every thing he read staid with him. The ideas in many mens minds are too like the impressions made in soft wax; they never are distinct and clear, and are soon effaced: in his mind they were like impressions cut in steel: they took some time in

[E] *An account will be found in the notes.* Every body concerned with him, says the ingenious Mr. Payne (10), 'felt the advantage of his benevolence and goodness of his temper. He had a paternal estate, the lessees of which found him a landlord kind indeed. He never raised his rents, or hardly changed a tenant; they grew old in his farms, and were afterward succeeded by their children. Such was he also to them that held under him, as he was a Bishop, good natured I am almost tempted to say to a fault. They were sure to find no pressure from him: the point in question always was, his preserving the just rights of his See. If he could be prevailed on to raise a fine, where the reason and equity of it was most apparent, it was always with great difficulty, and never his own voluntary act. In renewing some of his leases he shewed great instances of kindness and compassion, I wish they who received the obligation were sensible enough of it: For indeed, tenants under Bishops are generally a thankless sort of men; they consider not the estate they hold as another man's, but look upon it as their own, and part grudgingly with what goes out of it, as a hardship on themselves. As the great Christian graces in which he excelled were humility and meekness, and these concurring with a sedentary and studious habit, it is not to be expected that there should be in the same man any great degree of warmth and activity. God almighty gives not perfection to any man in this mortal state.' As to his modesty, condescension, and good nature in private life, he observes (11), — 'Learned men often love and affect to be silent. His Lordship was so humble, that he thought nobody too low to be conversed with; and so benevolent, that he was willing every body that came near him should partake of his knowledge. As he was the most learned, so he was the most communicative man I ever knew. No

conversation pleased him so well as what turned upon some point of learning. The first experience I had of this, continues Mr. Payne, was while I was under-graduate in the university, soon after his Lordship's promotion. I was then studying some parts of the Mathematical sciences. He did me the honour to talk with me on those subjects. It struck me with surprize to see so much condescension, familiarity of conversation, and love to inform a young man, in a person of his learning, age, and station. The years I since have spent in greater freedom with him, have been the happy part of my life; a blessing that by me can never be sufficiently valued. He was my oracle to consult on any author, or whatever subject I read. Whatever was difficult I was sure to have resolved by him. He was unacquainted with nothing I could ask him, even in small matters, in low authors, which it might be expected, by a man whose mind was taken up with so much higher speculations, should have been passed over unheeded. — His soul was through his whole life in a constant calm and serenity, hardly ever ruffled with any passion. Having thus a mind friendly to his body, and being exactly regular and temperate in his way of living, he attained to a good old age with perfect soundness of mind and body. He was not afflicted with, or subject to, any ailing or disorder; never complained that he was ill or out of order, came almost constantly from his chamber in a morning with a smile in his countenance (12). Such great, and such amiable qualities as these, more especially when they are testified to the world by evidence that cannot be suspected, much less disbelieved, do honour, not only to our Church and nation, but to human nature, and may be the more freely insisted upon when they do occur, because such as are best acquainted with mankind know well, that they occur but very rarely.

(12) *Idem, ibid.*
p. 23.

forming,

forming, but they were clear, distinct, and durable (a). The things he had chiefly studied were searches into the most antient times, Mathematics in all its parts, and the Scripture in its original languages: these were the great works of his life; but he had, by the bye, diverted into almost all other studies. He was thoroughly acquainted with all the branches of Philosophy; he had good judgment in Physic, knew every thing that was curious in Anatomy, had an intimacy with the Classics. Indeed he was a stranger to no part of learning, but every subject he had occasion to talk of he was as much a master of it, as if the direction of his studies had chiefly lain that way. He was thoroughly conversant in Scripture, and had laid up that treasure in his mind. No hard passage ever occurred, either occasionally or in reading, but he could readily give the meaning of it, and the several interpretations, without needing to consult his books (b). He sometimes had thoughts of writing an exposition of the Epistles to the Romans and Galatians. It was a misfortune to the world, that he wanted that spur so necessary to excite men to action, the desire of praise. It is believed, that if he had proceeded in this design, he would have set the doctrine of Justification in a light very different from that in which it has been hitherto considered by most Divines. But the great business of his life was the examination of SANCHONIATHO'S *Phœnician History*, about which the greatest men had been most mistaken, and in relation to which none had entered into so strict an examination as our learned Prelate thought it deserved (c). He spent many years in these speculations; for he began to write several years before the Revolution, and he continued improving his design down to 1702. It may be justly wondered, that, after taking so much pains, and carrying a work of such difficulty to so high a degree of perfection, he should never judge it expedient to publish it; for, though his Bookseller refused to print the first part, at a critical season, yet afterwards both might have seen the light; and for this the most probable reason that can be assigned is, that thorough dislike he had to controversy. His son-in-law however, the Reverend Mr. Payne, has done justice to his memory, and published that work, which, by all competent judges, has been received with the utmost esteem and respect (d) [F]. After he had once engaged his thoughts upon this subject, fresh matter was continually rising, for the distribution of which into a proper method, so as to render a very perplexed subject intelligible, he found himself under the necessity of undertaking a yet more extensive work than the former, in which he made some progress in the space of above twenty years, during which we are assured that it employed his thoughts. To this piece, when finished, he proposed to have given the title of *Origines Antiquissimæ* (e), which were transcribed in his life-time, and, by his direction, through the care of the same person, who, from a most laudable sense of duty and gratitude, published the other work. This treatise also is now likewise in print, and justifies, in every respect, all that we have said of this learned and venerable Prelate, upon the credit chiefly of the editor. This last piece is properly a supplement to the first,

(a) These facts are rendered highly probable, if not incontrovertibly proved by his writings.

(b) Payne's Pref. to Sanchoniatho's Hist. p. 21, 22.

(c) This fully appears from our Prelate's whole work, but more especially from his Review of the Cosmogony and History.

(d) Printed at Lond. 1720. 8vo.

(e) Ibid. p. 20, 21.

[F] *With the utmost esteem and respect.* The title of this work at large will give the reader some notion of it's contents. It runs thus: 'SANCHONIATHO'S *Phœnician History*, translated from the first book of Eusebius *de Preparatione Evangelica*. With a Continuation of Sanchoniatho's History by Eratosthenes Cyrenensis Canon, which Dicaearchus connects with the first Olympiad. These authors are illustrated with many Historical and Chronological Remarks, proving them to contain a Series of Phœnician and Egyptian Chronology, from the first man to the first Olympiad, agreeable to the Scripture accounts. By the Right Reverend R. Cumberland, D. D. late Bishop of Peterborough. With a Preface, giving a brief account of the Life, Character, and Writings, of the Author. By S. Payne, M. A. Rector of Barnack in Northamptonshire, his Lordship's domestick Chaplain (13).' Mr. Payne observes, that our author had a quicker sense than many other men of the advances Popery was making upon us, and was affected with the apprehension of it to the last degree. This made him turn his thoughts to the enquiry, by what steps and methods idolatry got ground in the world. The oldest account of this he believed he found in Sanchoniatho's fragment. This he saw was a professed apology for idolatry, and owned openly what other Heathens would have made a secret of, that the gods of the Gentile world had been all mortal men. He studied this fragment with no other view, than as it led to the discovery of the original of idolatry. He spent some time upon it, before ever he had a thought of extracting from it footsteps of the history of the world preceding the flood. While other Divines of the Church of England were engaged in the controversy

with the Papists, in which they gained over them so compleat a victory, our author was endeavouring to strike at the root of their idolatrous religion (14). Such are the sentiments of this gentleman concerning our Prelate's work, which is in truth full of the most abstruse learning, and shews a sagacity and penetration equally singular and admirable. These fragments have exercised the talents of some of the ablest scholars that foreign nations have produced, and several of these, being able to make nothing clear or consistent out of them, incline to think they were forgeries, and consequently not worthy of notice. Our Prelate was not only of a different sentiment, but, with great knowledge and great labour, has made it very evident that these fragments are genuine, and that he thoroughly understood them. He has proved, that they contain the most antient system of atheism and idolatry, that very system which took place in Egypt, and was set up against the true religion contained in the writings of Moses. It cannot be expected that we should, in the compass of a note, enter into the plan of so large and so compact a performance, for our author was not a diffuse writer, but expressed himself clearly in few words, and has brought into a very narrow compass, what an author, covetous of fame, would have extended into a very large volume. But this great man aimed only at truth, and though the discovery of it cost him much time and pains, yet he was willing to conduct his reader to it by the shortest road possible. He saw indeed, that many useful deductions might be made from this discovery, and it was this that put him upon composing a second volume, of which we shall speak in the next note.

(14) Payne's Pref. to Sanchoniatho's Hist. p. 17.

and

and equally valuable in every respect [G]. We have now done with his History as a Father of the Church, and an ornament of the Republic of Letters: we will conclude with some account of his private life and disposition when in the decline of his days, a season in which the weaknesses even of the greatest men are frequent and excusable. In him, however, there was no need of any apology of this sort. His Lordship lived beyond what Horace called old age; but never were characters more unsuitable to any man, than those bestowed by that Poet on old men were to him: it is literally true, that he was, in every respect, the very reverse of them. A person, who would have retired from every thing that was censorious, querulous, uneasy, or disquieting, must have gone into his company, and the room where he sat. The easiness and sweetness of his temper were such as is not to be described by words: nothing but conversation with him, and the experience of it, could give a man a just idea of it. This happy disposition was become a habit to him, and continued to the last day of his life. His senses and bodily strength lasted better than could well be expected, in a man whose course of life had been studious and sedentary. Yet I, who conversed every day with him, says Mr. Payne, thought that the faculties of his mind were less impaired than those of his body (f). He remained a master of all the parts of learning he had studied when he was young. He ever loved the Classics, and, to the last week of his life, would quote them readily and appositely. When Dr. Wilkins had published his Coptic Testament, he made a present of one of them to his Lordship, who sat down to study this when he was past eighty three. At this age he mastered the language, and went through great part of this version, and would often give excellent hints and remarks as he proceeded in reading it. At length, in the autumn of the year 1718, he was struck in an afternoon with a dead palsy, from which he could not be recovered (g). He had no previous notice of this at all, for he rose in the morning rather better, and more vigorous, than usual. He breathed his last in his Palace at Peterborough on the ninth of October, in the same year, in the eighty-seventh year of his age. His corps was interred in his own Cathedral, where a plain tomb has been erected, with a modest inscription, to his memory (h) [H]. The turn of his studies did not

(15) At London, 1784. 8vo.

[G] *And equally valuable in every respect.* The title of this book was: '*Origines Gentium antiquissimæ: or, Attempts for discovering the times of the first planting of Nations; in several tracts.* By the Right Reverend R. Cumberland, D. D. late Bishop of Peterborough. Published from his Lordship's manuscript, by S. Payne, M. A. Rector of Barnack in Northamptonshire (15).' This work consists of the following tracts, 1. A Discourse on Gen. xxxvi. concerning the settlement of Esau's family from Mount Seir to Elparan, the antient seat of the Horites, and of the government of that land before and after their settlement; with an enquiry about the times thereof. 2. A Discourse on Deut. ii. 23. The Avims which dwelt in Hazarim, even unto Azzah, the Caphtorim, which came forth out of Caphtor, destroyed them, and dwelt in their stead. 3. Notes on the Synchronisms of Canaan and Egypt. 4. Concerning the possibility of a sufficient increase of men, from the three sons of Noah, to a number large enough to found all the nations mentioned in the oldest credible Histories; and that, in the times assigned to their foundations, agreeably with the Hebrew accounts. With some suggestions about the dispersion of men to plant in several parts of the earth, particularly the building of Nineveh, the metropolis of the Assyrian monarchy. 5. An appendix to the preceding chapter, in an Essay towards the better stating of the interval between the founding of Nineveh and the fall of Sardanapalus, which broke from the antient Assyrian empire two monarchies: I. That of the Babylonians, beginning with Nabonassar. II. That of the Medes, begun in Dejoces, yet left to Tiglath Pilezer and his successors, an Assyrian empire, which recovered good strength, so as to conquer Syria, and to captivate the ten tribes of Israel. 6. Proofs from Scripture, and from Heathens, of the Assyrian empire before Nabonassar. 7. A Discourse, endeavouring to connect the Greek and Roman Antiquities, with those of the eldest Eastern monarchies in Asia and Egypt, and, consequently, with the dispersion from Babel, which came near the great flood; in two chapters, 1. Concerning Greece, especially the Pelasgi. 2. Concerning Italy, particularly the Tyrrheni, or, as the elder Greeks call them, the Tyrsni; these, besides the Egyptians, being colonies from the Assyrian empire, and the beginning of the Greek and Roman empires.

8. *Appendix de Cabiris, addenda Disquisitioni de Pelasgi.* i. e. An Appendix as to the Cabiri, to which is added, a Disquisition concerning the Pelasgis. 9. *Appendicula de Legibus quibus tenebantur Patriarchæ tam ante, quam post diluvium, usque ad tempus quo solemniter sancitum est Fœdus Mosaicum, quod leges continet præcipuas quibus tenebatur populus Judaicus post Exodum ex Ægypto;* that is, 'A succinct Dissertation concerning the Laws observed by the Patriarchs, as well before as after the Flood, down to the solemn settlement of the Law of Moses, more especially those under which the People of Israel lived, after going out of Egypt.' To pretend adding any farther explication of this work, would be a needless presumption; since, to competent judges, this short table of contents will prove more satisfactory, than any thing we could offer upon the subject. All therefore that we shall take the liberty to say more is only this, that notwithstanding our Prelate treats of the most antient History, it is in a manner entirely new. His learning, though deep and sound, has nothing in it harsh or unpleasant; and, amongst other advantages to which this work may put in a just claim, there is in it this singularity, that, notwithstanding all the points treated therein are remarkably perplexed, the author has handled them with the utmost perspicuity, made all of them plainer than they were, and many of them as plain as it is possible.

[H] *With a modest inscription to his memory.* As this is very short, we thought it would not be unacceptable to the reader, that it found a place with a translation in the notes (16).

at all conduce to make our Prelate eminent in his life-time. There were a great variety of books written against Hobbes; but, amongst this crowd of refuters, each of their books was not considered as a refutation. On the contrary, Hobbes maintained his notions very well against most of them, not through the justice of his cause, or the superiority of his understanding, but because he understood his ground perfectly well, and, like a skilful fencer, kept that advantage, and made the most of it. But our author was not to be so treated: he considered the ground well before he engaged, discerned his antagonist's advantage, and drove him from it; but as this was a hard and laborious task to himself, so his method of arguing was not to be understood but by close application in his readers, so that it was a long while before the merit of his performance was fully known (i). At present, indeed, his reputation is very great at home, and much greater abroad; for foreign writers, of all nations, have been very ready to do him justice, and to speak of him with the praises he deserves [I].

(i) See the Rev. Mr. Maxwell's Preface to his translation of our author's works, as also Dr. Hezekiah Burton's Short Discourse prefixed to the original.

In English thus:

Near this place lies interred, that most learned and holy Prelate, Richard Cumberland Bishop of this city, who, when he had long and faithfully watched for the Church and State, was translated to that other city, which alone he sought: full of days and of honour he slept in the Lord, in the year of Christ 1718, of his age 86.

*Proceed foul error's scourge, and friend to right,
Champion of Nature's laws, and Justice too;
How much! the assassin Hobbes now put to flight,
To thy sharp pen, do faith and reason owe?*

From Dupont's poem upon the confutation of Hobbes by Cumberland.

Underneath two books, with these words engraven on the leaves:

Biblia Sacra. Legibus Naturæ.
The Holy Bible. Of the Laws of Nature.

[I] *With the praises he deserves.* We find the Life of our Prelate very exactly written from his son-

in-law Mr. Payne's Memoirs, by Father Nicéron (17), who commends highly his book against Hobbes. The learned Morhoff mentions that work of his twice (18), and tells us, that in his judgment it was written with great labour and no less diligence; and observes farther, that he goes to the bottom in detecting the false reasoning of Mr. Hobbes. Another German author, who has written expressly upon the same subject, gives a great character of our author's book (19); and the learned Stollus gives likewise a fair character, and a very good account, of our author and his writings (20). His sentiments, with regard to Sanchoniatho's History, are greatly applauded by a gentleman (21) who had studied these matters with much care, and who, it is very certain, was far enough from being disposed to commend others without reason. It does not appear, that hitherto his Posthumous Works have been translated into Latin, or into any modern language. Whenever that shall happen, the fame of Dr. Cumberland will extend much farther than it has done hitherto; for whether his particular opinions be approved or not, it is impossible that his extensive learning, his profound sagacity, and his perfect acquaintance with the best authors of antiquity, should not procure him just reverence and esteem. C.

* * [CUNNINGHAM (ALEXANDER), Author of a History of Great Britain, from the Revolution to the Accession of King George I. was a native of Scotland; but we have not been able to ascertain either the time or place of his birth. It appears, however, that his father was minister of the parish of Ettrick, in the presbytery of Selkirk (a). He is said to have received part of his education in Holland; and he passed some of the earlier years of his life as a travelling governor. He was a friend to the principles of the Revolution; was much with the Scottish refugees at the Hague previously to that event; and it has been conjectured, that he was in Holland in 1688, and that he even embarked on board the fleet with the Prince of Orange; but of this there is not sufficient evidence. He travelled with James, afterwards Earl of Hyndford, and with the Hon. Mr. William Carmichael, father of the present Earl, who was younger brother to that Nobleman. They passed two winters at Utrecht and Franeker, between the years 1692 and 1695, and travelled together for some time afterwards (b). Mr. Cunningham was also much connected with the family of Archibald, Earl of Argyle: he appears to have had a considerable share in the education of that Nobleman's son, Lord Lorne, afterwards well known under the name of John Duke of Argyle (c); and he afterwards travelled with him abroad [A]. In 1701, he was in France, and was employed in some negotiations relative

(a) *Introduction to Cunningham's Hist. of Great Britain*, by William Thomson, LL.D. p. xxiv.

(b) *Ibid.* p. xv.

(c) *Ibid.* p. xxii.

[A] *Travelled with him abroad.* In a letter from the Earl of Argyle to Mr. Carstares, dated Edinburgh, July 10, 1697, and published in that Gentleman's State Papers, is the following passage: 'I have writ to Mr. Cunningham to lay aside any thoughts he had for some time yet of leaving my son (1).' And in a letter of Mr. Cunningham's to Mr. Carstares, printed in the same collection, dated Bruges, Oct. 20, 1697, Mr. Cunningham says, 'I do not yet know whether I shall go to Paris, or not, before I return to London. My Lord Argyle has not yet written any thing concerning his son. He was gone from this place to his regiment before I came here, which I am glad of; for I know his lieutenant-colonel will take care of him. He is mightily concerned for his regiment: every body tells him it will be broken. I have assured

(1) Carstares's State Papers, p. 318.

him, that you will do your utmost for him. I must presume to give you the trouble to carry over a few books of mine, which I have ordered to be sent to your brother's. You will be pleased to pass them as your own, else the custom would amount to the fourth part they are worth; but am confident that what books any of the King's Chaplains takes over will be free; because it may be said that they are the books he carried abroad with himself for his own use.'—As for the project, I know you will not only use all your credit with Secretary Ogilvy, but will also recommend the thing to all the Scots Nobility and Gentry you shall meet with at London (2). At the time when Mr. Cunningham wrote this letter, Lord Lorne was Colonel of a regiment, which his father, the Earl of Argyle, had raised, and which was sent over for the King's service

(2) *Ibid.* p. 360, 361.

relative to the Scottish trade with that kingdom [B]. About this time he appears also to have had the care of some other person of rank, whom he carried with him into Italy (d).

(e) *Id. ibid.*

In 1703, he was at Hanover, in company with Mr. Addison [C]; and returned to England in that year (e). By this time he appears to have formed some important political connexions; for, after his arrival in England, the same year, we find him, through the intervention of Dr. Moore, then Bishop of Norwich, engaged in a secret negotiation for the purpose of reconciling Lord Somers and Mr. Harley; in which he succeeded, at least for a time; the reconciliation between these statesmen being perfected, as he informs

(f) *History of Great Britain from the Revolution, vol. i. p. 353, 354, and Thomson's Introduction, p. xviii.*

(g) *Hist. uli supra, p. 361, and Thomson's Introduction, ibid. ut supra.*

us, at the house of Lord Halifax (f). About this time also he was consulted at London concerning the appointment of a new ministry for Scotland. He recommended the Duke of Argyle, and the Earl of Roxburgh; but if their youth were considered as an objection to these Noblemen, he pointed out, as the fittest minister for that kingdom, next to them, the Marquis of Tweeddale (g). In 1704, he was so much in the confidence of the English ministry, as to be consulted by them, at London, whether the royal assent should be given to the Scotch Act of Security (h). It appears that he was still in London in the following year, from a passage which occurs in his History, wherein he mentions his having had a conversation with Sir Isaac Newton about attacking Toulon [D], two years before the attack, which was made in 1707 (i).

(d) Dr. Thomson's Introduction, *ubi supra*, p. xviii.

(i) *Ibid. p. xix.*

(k) *Id. ibid.*

In 1706, Mr. Cunningham appears to have gone abroad again; and it is supposed, that during that year he was in Holland, and that the following year he travelled into Italy (k). But before the close of the year 1707, he was again in London, and took a very active part in promoting the Bill for the abolition of the Scotch Privy-council [E]; as he did also the following year in support of a Bill relative to collegiate and cathedral churches, and for subjecting deans and prebendaries to their diocesans (l). He likewise exerted all his influence, that the Members of the House of Commons, chosen for Scotland, should be strenuous assertors of the principles of the Revolution (m).

(l) *Introduct. p. xx. Hist. vol. ii. p. 161.*

(m) *Introduct. p. xxi. Hist. vol. ii. p. 356.*

vice in Flanders. Lord Lorne was appointed to the command of this regiment in 1694, when he was not quite seventeen years of age. But Dr. Thomson is mistaken in saying, that Lord Lorne was not seventeen at the time when Mr. Cunningham wrote this letter. His Lordship was born in 1678.

(3) *Introduction to Cunningham's History, p. xiv.*

The literary project referred to by Mr. Cunningham, in this letter (3), is supposed, by Dr. Thomson, to have been an intended edition of the Pandects of Justinian. And 'if we suppose,' says that Gentleman, 'that the literary project to which Cunningham alludes, was an intended edition of Justinian's Pandects, obvious reasons are not wanting why he should collect books, and why he should solicit the countenance and aid of the Scotch nation. The civil is the grand basis of the Scotch law; and he might receive assistance from the advocates pecuniary fund, as well as from their famous library, which is one of the best in the world. And, in fact, it appears from the records of the faculty of advocates, that, in order to enable him to accomplish this design, he was allowed from that fund an allowance of fifteen pounds a year, a sum towards the close of last century not inconsiderable (4).'

(4) *Ibid. p. xlvii.*

[B] *Some negotiations relative to the Scottish trade with that kingdom.* Two of Mr. Cunningham's letters upon this subject are published in Mr. Carstairs's State Papers (5), in one of which he gives an account of an interview which he had relative to that business with the Count de Torcy. He is supposed also to have been employed at this time in procuring intelligence, for the English ministry, relative to the military preparations then making throughout France (6); but of this there appears not sufficient evidence.

(6) *Thomson's Introduction, ubi supra, p. 13, 14.*

[C] *In 1703, he was at Hanover, &c.* In his History, speaking of the Court of Hanover in that year, he says, 'Mr. Joseph Addison also, and Mr. Alexander Cunningham, came thither, who, happening to have travelled through those countries, as well as to have made themselves well acquainted with all the secret Counsels in England, were as superciliously treated by the Germans, as they were graciously received by the Elector and the Princess Sophia (7).'

(7) *Vol. i. p. 307, 308.*

[D] *A conversation with Sir Isaac Newton about attacking Toulon.* The passage in his History is as follows: 'I remember well, that the excellent Sir Isaac Newton, who was no lover of war, had some discourses with me about attacking Toulon, two years before the attempt was made upon it: but

there appeared so many and so great difficulties to Alexander Cunningham, who knew the place and the roads about it, that he differed in opinion from Sir Isaac, not only on account of the difficulties of the place itself, but also of the disinclination of the rest of the confederates, which he always suspected in relation to that affair: forasmuch as by this one action, all the maritime power of the Popish Princes would be lost, and the whole dominion of the Mediterranean sea thereupon would also fall into the hands of the English and Dutch; from which the Emperor Joseph was as much averse, as he was ambitious to gain the sovereignty of Italy (8).'

(8) *Hist. vol. ii. p. 103.*

Dr. Thomson remarks, that we find Mr. Cunningham, in another part of his History, uniting his advice with that of Mr. Isaac Newton, relating to the coin of Great Britain; and that, on sundry occasions, he mentions the person, genius, and discoveries of Newton, with distinguished respect and admiration: an honour the greater to our author, that Sir Isaac had not, at that time, attained to the unrivalled celebrity which his name has since justly obtained in the world (9).'

(9) *Introduction, p. xix.*

[E] *Promoting the Bill for the Abolition of the Scotch Privy Council.* He says in his History, that, 'from his youth, he had borne a just hate against the Privy Council of Scotland (10)', which he represents as extremely arbitrary. In his account of the debates in parliament on this subject, he says, that Mr. George Baillie 'elegantly and briefly exposed the immoderate power of the Privy Council in former times, the rigorous exercise of their authority, and what dreadful examples they had exhibited of all sorts of cruelty.' He afterwards adds, that 'the courtiers, who were for protracting the time, made many and great delays, and proposed expedients, but to no purpose; for Sir Godfrey Copley, Sir Peter King, and Sir Joseph Jekyl, Mr. Freeman, Mr. Wortley, Mr. Aislaby, and others of both parties, celebrated for their eloquence in parliament, insisted strenuously, that now a Privy Council could be of no other use in Scotland, than that the Court might thereby govern every thing at pleasure, and by their own direction procure whomsoever they thought fit to be returned to serve in parliament; against which it was the common interest, both of the Scots and English, now united into one people, carefully to guard (11).'

(10) *Vol. ii. p. 135.*

(11) *Ibid. p. 137.*

When

When a new ministry was about to be formed, and the Tories began to acquire an ascendancy, Mr. Cunningham again went abroad [F]; and in October, 1711, he was at Milan, in company with Richard Lord Lonsdale, with whom he was introduced to the Emperor Charles VI. [G] then in that city, and just raised to the imperial throne. He appears

[F] *Mr. Cunningham again went abroad.* Before he quitted the kingdom, he appears to have had a conference with Mr. Harley, of which he has related the following particulars in his History: 'At this time a certain private Gentleman of the Whig party (by which he is understood to mean himself), but who had long kept an acquaintance with Mr. Harley, seeing a cloud gathering over his country, resolved to travel abroad. Before he set out, Mr. Harley desired a conference with him, and invited him to dine with him alone. Many things were freely discoursed of, according to their wonted familiarity and long acquaintance, concerning the inclinations of the people, and the perverse disposition of the allies; and the other shewed Mr. Harley, how hard and difficult a task he had undertaken. But they both persisted in their own opinions. After Mr. Harley had entreated him to stay here, the Gentleman said, Tell me, I pray, Sir, is the parliament to be dissolved? for this was very much suspected; but Mr. Harley was not willing to answer him. Then, said the Gentleman, When you tell me that, I shall easily grant all you can say of the happy times to come: but consider well that saying of Virgil,

'Fertur equis auriga, nec audit currus habenas

(12) *Hist.* vol. ii.
p. 303, 304.

(12)'

Mr. Cunningham says in another place, 'Mr. Harley, to whom it was natural to give fair words to every body, gained upon many people by his address, who were far from being of his sentiments (13)'. And he also says, 'Mr. Harley judged it most prudent to proceed with moderation: and it is said he persuaded his friends, and the Queen herself, to dissemble many things concerning the Pretender, on account of the Duke of Marlborough's forces, and his extraordinary power both at home and abroad. He was also afraid of the authority and inconsistency of the parliament. The Tories therefore resolved, that the present parliament should be dissolved, and another called. Mr. Harley, who had formed this whole scheme, gave many instructions to divers men of different parties, how to reconcile the minds of the people to him, and to render them subservient to his measures. Many were inquisitive to know his design. Nay, some said, he either had no design at all, or else that it was most artfully concealed, lest by the dissent of any one, the whole combination should be broken. Those who supposed they knew him thoroughly, own that he was averse to the Pretender: but, if we may judge of him by his actions, men of all parties agreed in concluding, that his designs were in his favour. And it is certain, that he affected to have it thought so (14)'.
(13) *Ibid.* p. 308.

(14) *Ibid.* p. 303.

Of the calling a new parliament, and the use made of Sacheverell, and his reception in the country, Mr. Cunningham gives the following account: 'When the proclamation was issued for a new parliament, all England was in an uproar; and so enflamed by the churchmen, that their fury was to determine of the Members for the House of Commons, and their elections, without any regard to the rights of the electors. For the canvassings and elections were carried on with such feuds, as had never before been known in England. In many places they were carried by open violence. That firebrand of sedition, Dr. Sacheverell, employed his whole time and pains to this purpose. Religion was therefore looked upon as the only popular cause: in the support of which all the furies were raised to procure votes, and ran together, as it were, to the funeral of the government and the public liberty.'—Dr. Sacheverell, making a progress around the country, was looked upon as another Hercules for

the church militant. Wherever he went, his emissaries were sent before with his pictures; pompous entertainments were made for him, and a mixed multitude of country fiddlers, priests and sextons, and a mob of all conditions, male and female, crowded together to meet and congratulate him; among whom, drunkenness, darkness, and a furious zeal for religion, extinguished all regard to modesty. When this guest drew near with his guards, he found open houses, lodging and entertainment ready provided for him, in many country towns, as if he had been a demi-god: and days and nights were spent every where in shews, and the clamorous noise of those religious furies. In order to gain the more upon the minds of the multitude, wine, and the pleasures of banquetting, were consecrated, as it were, to religious uses: whence arose such a contagion of evils, that, in the country elections, some matters were carried on by deceit, and many by open force. For money was publickly bestowed, and free treats, more than usual, given to the voters. In many places, the Doctor's pictures passed for ready money; but in a short time they became of little value. For, when they ceased to be a novelty, people began to despise them; and the Doctor himself, as an enemy to the government, and a contemptible tool of a party, was either rudely treated, or utterly refused admittance, in many places and companies. When he was coming towards Ely, the people there were so provoked, that they threatened to do him a mischief. And in many places they pursued him, both with violent hands, and with curses. This so alarmed him, that he suddenly turned short, and more desirous of money than the honour of martyrdom, made the best of his way to London; and his pictures, which were of late so highly prized, and pompously handed about, were now contemptuously applied to the basest uses, and pasted upon band-boxes (15)'.
(15) *Ibid.* p. 305, 306, 307.

[G] *He was introduced to the Emperor Charles VI.* The allies had been for some time labouring to establish this Prince on the throne of Spain, and he had accordingly been proclaimed King at Madrid; but he was afterwards obliged to relinquish the Spanish Crown. When Mr. Cunningham was at Milan, many Princes, Ambassadors, and persons of rank, came there to congratulate the new Emperor on his accession to the imperial throne; but it was at this time that suspicions first began to be entertained, that the English ministry were about to abandon the allies. Mr. Cunningham, in his History, after observing, that "all Italy crowded to" Milan, to congratulate the Emperor on his accession, says, 'The Duke of Savoy went to meet him, as did also the Dukes of Parma and Modena. These, and many other Princes, sent their Ambassadors to compliment him as Emperor. The great Duke of Tuscany's younger son came to salute him. The republics of Venice and Lucca sent a splendid embassy. And the Pope himself sent Cardinal Imperiali, a man of great celebrity, and highly acceptable to him, as his legate à latere.'—Amidst this great course of all the Italian and German Princes and Ambassadors, Richard Lord Viscount Lonsdale, and Mr. Alexander Cunningham, his fellow traveller, who were the only men of the British nation at that time in those parts, came to Milan. And as they were no strangers to what was then privately transacted in England, they immediately desired to be admitted to pay their duty to his Majesty, which was granted. His Majesty gave them a gracious audience. For he was well assured of the fidelity and zeal which both of them had for his service, and how much they abhorred all thoughts of having any concern in the base measures which were then carrying on in England. His Majesty spake much in commendation of the civility of the private

appears to have continued abroad the following year, and at Venice met with the Duke of Argyle [H], with whom he spent a week in that city. When he returned to England, we do not find, nor are any farther particulars related of him during this reign; but in the reign of King George I. he was appointed minister from the Court of Great Britain to the republic of Venice. He arrived in that city in 1715, and continued there, in the character of resident, till the year 1720, when he returned again to London. He lived many years after, which he seems chiefly to have passed in a studious retirement. In 1735, he was visited in London by Lord Hyndford, by the direction of his Lordship's father, to whom he had been tutor, when he appeared to be very old (n). He seems to have lived about two years after; for the body of an Alexander Cunningham lies interred

(n) Thomson's
Introd. p. xxxviii.

' private subjects in England, and of the good offices done to him there; but said not a word of the Queen or her Counsels. And in this, indeed, he shewed his great wisdom, as they were only private persons, and far from having any share either in her Majesty's Counsels, or in the administration of the public affairs. He also commanded his Ministers to entertain them with the utmost civility and respect, and to furnish them with all sorts of accommodation. Though they were not in want of any thing, yet they were invited to many entertainments. Being invited to sup that night with Count Wratislaw, as they were coming to supper, they were overwhelmed, as it were with a sudden tempest, by the news brought by an express from Count Gallas, that the cause of the confederates was betrayed in England. On this they were so struck with astonishment, that they crowded about the two Englishmen in the Palace, asking them questions; but all to no purpose.

' The young Lord Lonsdale, alarmed at the novelty of his situation, and the tumult of the Germans, whispered to Cunningham, that it would be prudent for them to withdraw from the Palace. But Cunningham refused to do this, and dissembling his fear, inquired, What was the matter? The Germans told them every thing: that the Queen had entered into a treaty with the French King; that the confederates were betrayed; and that Count Gallas was ordered to leave England in two days, and was now actually come over to Holland. To this Cunningham replied, "These are strange times! This is strange news! I have been afraid, indeed, ever since the beginning of this confederate war, and especially within the two last years, of some unhappy effects of a female government: I therefore resolved voluntarily to travel abroad, rather than to stay at home to be a spectator of such things; even now to bear a share with you in your injuries, than to have any thing to do with those works of iniquity. Do not think that the English nation are so stupid; as after so many victories obtained, when the prize is now just ready to fall into their hands, to suffer it to escape them. Ye tell me ye are betrayed: but it is incredible. Do but look back upon the fidelity of the English, of which ye have had so much experience hitherto; and then ye will rather confide in them still, than suspect them to be capable of deceiving you now." He added, a great many other arguments and words of course, that both himself and fellow-traveller might the more readily escape the frowns of the Germans.'

' In the mean time, Count Wratislaw conducted them to supper. There the Germans again asked many questions about the Queen, and about her Ministers. Cunningham confessed, that the loss of reputation and credit was greater than could be imagined, and made such other answers as he thought proper: but he laid the chief blame upon the clergy, whose blindness and influence in the parliament was at that time incredibly great; and desired them not to be too hasty to give credit to any reports, till they should first see how these things would end.

' After supper, the two Englishmen returned to their own apartments. Soon after this the Earl of Peterborough arrived suddenly in that city, and received the compliments of Count Wratislaw, and others of his Majesty's Ministers, the same night. They inquired of him, What was the reason of the

' change of measures in England? Which of the confederates had offended the Queen? And why her Majesty would now give up her allies as a sacrifice, and betray their glorious cause to the common enemy? The Earl of Peterborough, with great promptitude and presence of mind, invented ingenious apologies, and made such answers as he thought fit, without much inward concern, however, at that alteration of affairs, which gave them so much uneasiness and displeasure.

' The next day the Lord Viscount Lonsdale and Mr. Cunningham took an opportunity to visit his Lordship, and to congratulate him on his arrival. After their mutual compliments, the Earl of Peterborough said, "What is the matter here? I perceive his Majesty's Ministers to be full of uneasiness. I had scarcely come into town before they fell upon me, and teased me with a thousand questions; so that I had neither a wink of sleep last night, nor any rest this morning. Tell me, therefore, I pray you, what is the meaning of it?" Mr. Cunningham made him this answer: "It is very well for us that your Lordship is come. It is impossible to relate what we went through the last night. But as your Lordship is acquainted with all her Majesty's Counsels, you must needs know every thing that is doing in England: and since you are able to answer all their questions, and to satisfy all their desires, be pleased, my Lord, to impart that satisfaction, which they desire so eagerly, to us. They tell us here very strange things; that the Queen is secretly treating with the French King about a peace; and that Count Gallas, the Ambassador, was ordered to depart the kingdom; and what not. That any unjustifiable measures are carrying on in England, is a sad thing to be reported, and most afflicting to us to hear. If this be true, you must know it; and for my part, if they ask me any more questions about it, I shall refer them to your Lordship."

' The Earl of Peterborough replied, "I have a very weighty affair to negotiate here; not less than twenty thousand pounds payable to me by King Charles." "That is, indeed," says the other, "a weighty affair. Your Lordship must, therefore, suit yourself to their humour, dissemble your own sentiments of the peace, and consult the glory and welfare of our nation, as you would have others consult your own interest." He also added many other things concerning the dishonour this peace would reflect upon England; concluding with a wish, that the Queen would continue this one year firm to her alliance with the new Emperor, and once more try his fortune in the field (16).'

[H] *At Venice met with the Duke of Argyle.* He says in his History, "In these gloomy times, the Duke of Argyle, returning from Spain, though not yet perfectly recovered of his tertian ague, came to Venice. There he was met by Mr. Alexander Cunningham, whom, on account of old acquaintance, the Duke honoured with great friendship and familiarity for a whole week. They laid aside all party disputes, and conversed at great length with perfect freedom. The Duke of Argyle expressed his sense of the dangers to which the interests of Great Britain, and the common safety of the confederates, were exposed; and declared his resolution, as soon as he could possibly return to England, to oppose the ministry, and the peace, and to join the Whigs (17).'

(16) Hist. vol. ii.
p. 386—390.

(17) Vol. ii. p.
409, 410.

in the vicar chancel of St. Martin's church, who died in the eighty-third of his age, on the 15th day of May, 1737 (o); and who was probably the same person.

(o) *Ibid.* p. xli.

His "History of Great Britain, from the Revolution in 1688, to the accession of George the First," was published in two volumes, 4to. in 1787. It was written by Mr. Cunningham in Latin, but was translated into English by the Rev. William Thomson, L. L. D. The original manuscript came into the possession of the Rev. Dr. Hollingbery, Archdeacon of Chichester, some of whose relations had been connected with the author. He communicated it to the Earl of Hardwicke, and to the Rev. Dr. Douglas, now Bishop of Carlisle, both of whom recommended the publication. In a short preface to the work, the Archdeacon says, "My first design was to have produced it in the original; but knowing how few are sufficiently learned to understand, and how many are indisposed to read two quarto volumes in Latin, however interesting and entertaining the subject may be, I altered my purpose, and intended to have sent it into the world in a translation. A nervous fever depriving me of the power, defeated the scheme." But he afterwards transferred the undertaking to Dr. Thomson; and Dr. Hollingbery observes, that Dr. Thomson "has expressed the sense of the author with fidelity." The work was undoubtedly well deserving of publication. It contains the history of a very interesting period, written by a man who had a considerable degree of authentic information, and his book contains many curious particulars not to be found in other histories. His characters are often drawn with judgment and impartiality: at other times they are somewhat tinged with prejudice. This is particularly the case with respect to Bishop Burnet, against whom he appears to have conceived a strong personal dislike. But he was manifestly a very attentive observer of the transactions of his own time; his work contains many just political remarks; and the facts which he relates are exhibited with great perspicuity, and often with much animation. Throughout his book he frequently intersperses some account of the literature, and of the most eminent persons of the age concerning which he writes; and he has also adorned his work with many allusions to the classics, and to ancient history.

Alexander Cunningham, the author of the History of Great Britain, has been supposed to be the same person with Alexander Cunningham, who published an edition of Horace at the Hague, in two volumes, 8vo. in 1721, which is highly esteemed. But, from the best information we have been able to collect, they were certainly different persons; though they were both of the same name, lived at the same time, had both been travelling tutors, were both said to have been eminent for their skill at the game of chess [I], and both lived to a very advanced age. The editor of Horace is generally said to have died in Holland, where he taught both the civil and canon laws (p), and where he had collected a very large library, which was sold in that country.]

T.

[I] *Eminent for their skill at the game of chess.* The editor of Horace was very particularly celebrated for his skill as a chess-player; and of one of the Cunninghams the following story is related. "When Lord Sunderland was at the Hague, he contracted a particular intimacy with Mr. Cunningham, as they were both remarkable chess-players. Whenever his Lordship was at leisure, he either drove to Cunningham's lodgings, which were at some distance, or sent his carriage for him. After playing for a course of time, Lord Sunderland discovered, that he who was jolted in the carriage before they sat down, was always sure to lose every game: for which reason, he gave over going to Cunningham's, but always sent for him, and always beat him, to his no small astonishment, as he was conscious that he understood the game as well as his adversary. At last, when he was very much out of humour, Lord Sunderland told him

the trick, and Cunningham insisted, that they should drive to one another's lodging alternately; which confirmed his Lordship's observation, and restored Cunningham to his former level: for, from that time, they won and lost alternately (18).—"This fact," says Dr. Thomson, "which appears not at all incredible, for the streets of the Hague were not, in the last century, so smooth as those of London are at present, proves how nicely the capacities of Sunderland and Cunningham were balanced against each other: but it is more curious and interesting on another account; it shews the intimate connection between our corporeal frame and the faculty of thinking (19)." It seems to be the editor of Horace of which this story is related; but which ever of the Cunninghams it was, the story seems not sufficiently authenticated to ground upon it much philosophical reasoning.]

(19) *Id. ibid.*

* * [CUTTS (JOHN Lord), a soldier of most hardy bravery in King William's wars, was a younger son of Richard Cutts, Esq (a); of an ancient and distinguished family, settled about the time of Henry VI. at Matching in Essex, where they had considerable property. His father removed to Childerley in Cambridgeshire, on a good estate being given him by Sir John Cutts, Bart. who died without issue. This estate, after the decease of an elder brother, devolved on John; who sold it, to pay incumbrances, to equip himself as a soldier, and to enable himself to travel (b). After an academical education at Cambridge, he entered early into the service of the Duke of Monmouth, and followed his fortunes abroad; was Aid-de-Camp to the Duke of Lorraine in Hungary, and signalized himself in a very extraordinary manner at the taking of Buda by the Imperialists in 1686; which important place had been for nearly a century and a half in the hands of the Turks. Mr. Addison, in a Latin poem (c) worthy of the Augustan age, plainly hints at Mr. Cutts's

distinguished bravery [A] at that siege. He was afterwards Colonel of a regiment in Holland under the States, and accompanied King William to England, who "being graciously pleased (d) to confer a mark of his royal favour upon Colonel John Cutts, for his faithful services, and zealous affection to his royal person and government, thought fit to create him a Baron of the kingdom of Ireland, by the style and title of Baron Cutts of Gowran in the said kingdom, December 6, 1690." He was appointed Governor of the Isle of Wight, April 14, 1693; made a Major-General; and, when the assassination-project was discovered, 1695-6, was Captain of the King's Guard. He was twice married; first, to Elizabeth (e), daughter of George Clark of London, Merchant, (relict of John Morley, of Glynd, in Suffex, and after, of John Trevor, Esq; eldest brother to the first Lord Trevor). This Lady died in Feb. 1692; and that same year he had both his legs hurt in the battle of Steenkirk (f). His second wife, an amiable young woman, was educated under the care of her grandmother, the Lady Pickering [B], of Cambridgehire. She was brought to bed of a son, September 1, 1697, and died in a few days after, aged only 18 years and as many days. Her character has been admirably delineated by Bishop Atterbury [C], who thus inscribes a Sermon to her surviving Lord.

"MY LORD,

Dec. . . . 1697.

"AT your command I preached this Discourse; but upon so short a warning, that nothing less than your repeated commands could have excused me for publishing it [D]. The

[A] *Mr. Cutts's distinguished bravery.*

"Hic, ubi saxa jacent disperso infecta cerebro,
Atque interruptis hincunt divortia muris,
Vexillum intrepidus fixit, cui tempora dudum
Budenfes palmarum, peregrinaque laurus obumbrat (1)."

(1) See the whole poem, intitled, "Pax Gulielmi auspiciis Europæ reddita, 1697," in Addison's Works.

[B] *Care of her grandmother, the Lady Pickering.* For an ingenious conjecture concerning Lady Pickering, see the Gentleman's Magazine, vol. liv. p. 120.

[C] *Admirably delineated by Bishop Atterbury.* The whole of this character is well worth transcribing, if our limits would allow it. The conclusion of it we cannot omit.

"Soon after her marriage, she declared to several friends her thoughts, that every woman of quality was as much more obliged, as she was more enabled than other women, to do good in the world; and that the shortest and surest way of doing this was, to endeavour by all means to be as good a Christian, and as good a wife, and as good a friend, as was possible.

"She endeavoured to be all this, and she fell not far short of it: for she excelled in all the characters that belonged to her, and was in a great measure equal to all the obligations that she lay under: she was devout, without superstition; strict, without ill-humour; good-natured, without weakness; chearful, without levity; regular, without affectation. She was to her husband the best of wives, the most agreeable of companions, and most faithful of friends; to her servants, the best of mistresses; to her relations, extremely respectful; to her inferiors, very obliging; and by all that knew her, either nearly or at a distance, she was reckoned, and confessed to be, one of the best of women.

"And yet all this goodness, and all this excellence, was bounded within the compass of eighteen years, and as many days: for no longer was she allowed to live among us. She was snatched out of the world as soon almost as she made her appearance in it; like a jewel of high price, just shewn a little, and then put up again; and we were deprived of her by that time we had learnt to value her. But circles may be complete, though small; the perfection of life doth not consist in the length of it: if it did, our Saviour, to be sure, would not have died so soon after thirty.

"Short as her life was, she had time enough to adorn the several states of virginity and marriage; and to experience the sadness of a kind of widowhood too: for such she accounted it, when her Lord was long absent from her, mourned as much, and refused as much to be comforted, till his return.

"As her life was short, so her death was sudden; she was called away in haste, and without any warning. One day she drooped, and the next she died: nor was there the distance of many hours between her

being very easy in this world, and very happy in another.

"However, though she was seized thus suddenly by death, yet she was not surprized; for she was ever in preparation for it; 'her loins girt' (as the Scripture speaks), 'and her lamp ready trimmed,' 'and burning.' The moment almost that she was taken ill, she was just risen from her knees, and had made an end of her morning devotions. And to such an one a sudden death could be no misfortune. We pray indeed against it, because few, very few, are fit for it; and the Church is to proportion her forms to the generality of Christians: but where a good soul is in perfect readiness, there the sooner the fatal stroke is struck the better; all delays in this case are uncomfortable to the dying, as well as to those friends who survive them.

"In truth, she could not be called away more hastily than she was willing to go. She had been used so much to have 'her conversation in Heaven,' and her soul had been so often upon the wing thither, that it readily left its earthly station upon the least notice from above; and took the very first opportunity of quitting her body, without lingering, or expecting a second summons. She stayed no longer after she was called, than to assure her Lord of her entire resignation to the Divine Will, and of her having no manner of uneasiness upon her mind; and to take her leave of him with all the expressions of tenderness. When this was over, she had nothing more to do with her senses; she sunk immediately under her illness, and, after a short unquiet slumber, slept in peace.

"Thus lived, and thus died, this excellent Lady, whose character I have so far represented, as my time, and the measure of such discourses as these, would suffer me; and endeavoured to renew a faint image of her several virtues and perfections upon your minds. I have done it in a confused manner, and without the nice divisions of art; for grief is not methodical: it is enough, if I have been able to set before you some resemblance of her, though I should not have done it after the best and liveliest manner: when the life is gone, a picture, drawn even by an unskilful hand, hath its use and value; and those who loved what it doth (however unequally) represent, will be touched at the sight of it (2)."

[D] *That nothing less than your repeated commands could have excused me for publishing it.* Two other Sermons were published on the same occasion; one by John Provoste, M. A. with an account of her most pious life and lamented death, and a dedication to Lord Cutts; the other, preached at Kensington Church, Dec. 5, 1697, by W. Wigan, M. A. Vicar of Kensington. Wigan and Atterbury were both at this time Chaplains in ordinary to his Majesty. Atterbury's Sermon was probably also preached at Kensington.

(2) Atterbury's Miscellaneous Works, 1739, p. 120—123.

subject

subject of it is death; a thing which you, my Lord, have very familiarly conversed with, and seen in all its shapes; but never, I believe, found it so truly terrible as in the face of my Lady. All that were about you were witnesses with how sensible a concern you bore the loss of her: and indeed it was such a loss, as even all your courage was but little enough to bear. I pray God, it may turn to account to your Lordship another way; and may furnish you with such reflections, and inspire you with such resolutions, as, if well pursued, will make you amends for any loss on this side Heaven. Your Lordship has chosen to express some part of your grief this way, by giving the world an opportunity of grieving with you; which it will certainly do, wherever my Lady Cutts's character is truly known; and I have endeavoured to make it known in the following pages, with all the sincerity that becomes my profession; a quality which, I must own to your Lordship, I would not forfeit upon any account; no, not though I were sure of doing the greatest good by it. Some part of what is there written I know, and the rest I do in my conscience believe to be true, after a very strict and particular enquiry. If I may be so happy, in what I have said, as to contribute any ways towards fixing a true opinion of my Lady's merit, and spreading the interests of virtue and piety by the means of it, I have all the ends I proposed to myself in this discourse; beside the honour of publishing to the world, that

"I am your Lordship's most obedient and most humble servant;

"FRANCIS ATTERBURY."

In 1695, and the three following parliaments, Lord Cutts was regularly elected one of the representatives both for the county of Cambridge, and for the borough of Newport in the Isle of Wight; but made his election for the former. In two parliaments which followed (1702 and 1705) he represented Newport (*b*). In 1698 he was complimented by Mr. John Hopkins (*i*), as one to whom "a double crown was due," as a hero and as a poet. In 1699, he is thus introduced (*k*) in a compliment to King William on his conquests:

"The warlike Cutts the welcome tidings brings;
"The true brave servant of the best of Kings;
"Cutts, whose known worth no herald needs proclaim;
"His wounds and his own worth can speak his fame."

(*b*) Cave's Parliamentary Register, 1741.
(*i*) Nichols's Select Collection of Poems, vol. ii. p. 327.
(*k*) *Ibid.* p. 194.

He was Colonel of the Coldstream, or second regiment of guards, in 1701; when Steele, who was indebted to his interest for a Captain's commission in the Lord Lucas's regiment of fusileers, inscribed to him his first work, "The Christian Hero [*E*]." On the accession of Queen Anne, he was made a Lieutenant-General of the forces in Holland. Feb. 13, 1702-3, he was appointed Commander in Chief of the English forces on the Continent

[*E*] *The Christian Hero.*]

To the Right Honourable the Lord Cutts, Colonel of his Majesty's Coldstream Regiment of Guards, &c.

"My Lord, Tower Guard, March 23, 1701.

"The address of the following papers is so very much due to your Lordship, that they are but a mere report of what has passed upon my guard to my Commander; for they were writ upon duty, when the mind was perfectly disengaged, and at leisure, in the silent watch of the night, to run over the busy dream of the day; and the vigilance which obliges us to suppose an enemy always near us, has awakened a sense that there is a restless and subtle one, which constantly attends our sleep, and meditates our ruin.

"Thoughts of this nature a man may with freedom acknowledge to your Lordship, who have ever been so far from running into the fashionable vice of exploding religion, that your early valour first appeared against the professed enemies of Christianity; and Buda had transmitted you to late posterity, but that you yourself have obliterated your part in that glorious scene by the fresher memory of you at Lime-rick and Namur.

"With one honest purpose of life, and constant service of one interest and one cause, in what country have you not fought? in what field have you not bled? But I know I here offend you, nor will you allow warmth in commendation to be like a friend; but if, my Lord, to speak you generous, honest, and brave, be not friendly, I do assure you it is the only thing I will ever do in common with your enemies.

"I said your enemies; but if there are any who have ignorance or malice enough to be such, their little hates must be lost in the distinction the better

world allow you; and that county (*3*) (whose discerning is refined by a learned and elegant university) has done you so great an honour in making you unanimously their representative in parliament, that they who would oppose your reputation, do but confess they are unacquainted with what passes in the world, and strangers to the residence of knowledge and virtue. It was there you received those rudiments of honour, which have rendered your life conspicuous enough to make you appear a worthy descendant of an ancient and distinguished family, which has served the Crown in the most eminent stations, and been equally favourites of their country. It was there you imbibed those impressions which inspire that true use of your being, which so justly divides your time between labour and diversion, that the one does but recreate for the other, and which give a generous contempt of both when in competition with the service of that country which you love, and that God whom you worship.

"Go on, my Lord, thus to contend, and thus to enjoy life; and, if some great English day does not call for that sacrifice which you are always ready to offer, may you in a mature age go to sleep with your ancestors, in expectation, not of an imaginary fame, but a real and sensible immortality.

"As for the present I now make you, if you will accept it with your usual goodness and affection to me, I shall entertain no farther hopes; for as your favour is my fortune, so your approbation is my fame.

"I am, my Lord,
"your Lordship's most obedient,
"most faithful, and most humble servant,

"RICHARD STEELE."

during

during the absence of the Duke of Marlborough; Commander in Chief of the forces in Ireland, under the Duke of Ormond, March 23, 1704-5; and afterwards one of the Lords Justices of that kingdom, to keep him out of the way of action, a circumstance which broke his heart. He died at Dublin, Jan. 26, 1706-7, and was buried there on the 29th, in the Cathedral of Christ-church (l). He was a person of eminent natural parts, well cultivated by study and conversation; of a free, unreserved temper; and of undaunted bravery and resolution. As he was a servant to Queen Mary when Princess of Orange, and learned the trade of war under her Consort, he was early devoted to them both, and a warm supporter of the Revolution (m). He was an absolute stranger to fear; and, on all occasions, gave distinguishing proofs of his intrepidity, particularly at the siege of Limerick in 1691, at the memorable attack of the Castle of Namur in 1695, and at the siege of Venlo [F] in 1702. Macky (n) says of him, in 1703, "He hath abundance of wit, but too much seized with vanity and self-conceit; he is affable, familiar, and very brave. Few considerable actions happened in this as well as the last war, in which he was not, and hath been wounded in all the actions where he served; is esteemed to be a mighty vigilant officer, and for putting the military orders in execution; he is pretty tall, lusty, well-shaped, and an agreeable companion; hath great revenues, yet so very expensive, as always to be in debt; towards fifty years old." Swift, in a MS. note on the above passage, with his usual laconic cruelty, calls Lord Cutts, "The vainest old fool alive." He wrote a poem on the death of Queen Mary (o); and published, in 1687, "Poetical Exercises, written upon several Occasions, and dedicated to her Royal

[F] Particularly at the siege of Limerick in 1691, at the memorable attack of the Castle of Namur in 1695, and at the siege of Venlo in 1702.]

"In the Netherlands, the Earl of Marlborough not being able to bring the French to an engagement, the Deputies of the States in the army represented to him, that it would be much to the advantage of Holland, to dispossess the enemy of the places they held in the Spanish Guelderland, whereby the navigation of the Maese would be opened. And accordingly preparations were made for the siege of Venlo, which was invested the 29th of August, and on the 7th of September the trenches were opened. I shall not take upon me to give a diary of every siege during this long war, but there are some heroic actions that must not be passed by: such was that performed by my Lord Cutts before this place. On the 18th of September his Lordship was commanded to attack Fort St. Michael, between the Bastion that is next the plain, and the Ravelin that lies on the North side of it, having under his command Brigadier General Hamilton, with the Royal Regiment of Ireland, and General Hukelem's regiment, 172 Grenadiers, and 100 Fusileers, most English, under a Lieutenant Colonel; as also 300 workmen, with a competent number of Engineers under Colonel Blood. His Lordship's orders were to make a lodgment from the point of the Ravelin to the Bastion, leaving him at liberty to proceed farther if he found it practicable. And at the same time the Prince of Anhalt, with the same number of troops, was to make an attack between the Bastion and the Ravelin on the North side, with the like discretionary orders, either to lodge himself, or to advance as he should see occasion. The signal for both attacks, which was to be the blowing up a tun of powder, and the discharge of all the batteries of the besiegers, both cannon and mortars, was accordingly made a little before six in the evening. The Lord Cutts had given orders on this attack to the Officers that led the Grenadiers, first to clear the covered way of the enemy, and if they saw it practicable when that was done, to attack the Ravelin sword in hand; assuring them, in the hearing of all the Grenadiers, that as soon as he saw fifty of the latter on the top of the Ravelin, he would sacrifice himself and his troops rather than not sustain them; and that therefore they might go on with undauntedness if they found it possible to pass. His Lordship heightened their courage and alacrity by promising rewards in her Majesty's name to all such who should signalize themselves. His Lordship's orders were executed with inexpressible vigour and cheerfulness; and as soon as the Grenadiers, whom his Lordship with distinguished intrepidity and admirable presence of mind sustained with fresh numbers, had cleared the Counter-scarp with their fire, and avoided a Mine which was

unsuccessfully sprung by the enemy, they boldly attacked the Ravelin with sword in hand, encouraging and assisting one another upon the assurance of being seconded; which the Lord Cutts perceiving, he marched with all his forces, engaged the enemy, and was soon master of the Ravelin. The French then made a great fire upon the English from the rampart of the Fort; whereupon the Lord Cutts sent orders to the Officers that were at the head of the Grenadiers, to throw in their granadoes and attack the Fort sword in hand, if it were possible to find a passage; which they did, by charging and following the enemy so close, that they had not time to break the bridge, though it was hotly disputed by fire and push of pike, and especially by the enemy's Grenadiers from the flank of one of their Bastions. But the bravery of the English Grenadiers, by the example of their Officers, and some Volunteers of distinction, (as the Earl of Huntington, my Lord Lorn, my Lord Marckar, the Prince D'Avergne, Sir Richard Temple, Colonel Webb, and Mr. Dalrymple,) was inexpressible: some of them attacked the bridge, and some clambered up the ramparts, after having thrown in their granadoes, and forced their way into the Fort. The enemy continued to defend themselves, till the English poured in so fast upon them, that they were no longer able to resist; which as soon as the Lord Cutts perceived, he checked the fury of the soldiers, and put a stop to the slaughter. The English took above 200 prisoners, whereof 30 were Officers, with a Brigadier General and the Governor; but all the rest that were in the Fort, to the number of 600 were killed or drowned, endeavouring to escape, except 12 who happily passed the Maese in small boats.

"When the Lord Cutts found himself entirely in possession of the Forts, having left 400 men in the outworks, he posted a guard at the great Port towards the town, and a small guard at each Sally Port, seized the Magazines, sent out 100 Grenadiers to discover on the side of the Maese, if any of the enemy were there drawn up; the rest of his troops upon the rampart, towards the town, turned the enemies cannon upon them, made a discharge to give notice to the camp that all was well, and continued under arms all night. Of the English in this action two Captains were wounded, two Lieutenants and one Ensign killed, and three wounded, one Serjeant killed, and three wounded, 130 men killed, and 132 wounded: And the Lord Cutts's Aid de Camp, Captain Bolas, with Mr. Eley, an English Volunteer, killed on the spot. The loss of the Dutch was no less than that of the English.

"On the 25th of September the town of Venlo beat a parley, and the garrison surrendered upon honourable terms, and were conducted to Antwerp (4)."

(4) Life of Queen Anne, p. 114—120.

"Highness

"Highness Mary Princess of Orange; licensed March 23, 1686-7, Roger L'Estrange." It contains, besides the dedication signed "J. Cutts," verses to that Princess; a poem on Wisdom; another to Mr. Waller on his commending it; seven more copies of verses (one of them called "La Muse Cavalier," which had been ascribed to Lord Peterborough, and as such mentioned by Mr. Walpole in the list of that Nobleman's writings), and eleven songs; the whole composing but a very thin volume; which is by no means so scarce as Mr. Walpole supposes it to be (p). The author speaks of having more pieces by him. A specimen of his poetry (of which the five first lines are quoted by Steele in his fifth Tatler) is added in the note below [G].

[G] *Is added in the note below.*

"Only tell her that I love,
Leave the rest to Her and Fate;
Some kind planet from above
May perhaps her pity move;
Lovers on their stars must wait;
Only tell her that I love.

Why, oh, why should I despair?
Mercy's pictur'd in her eye:
If she once vouchsafe to hear,
Welcome Hope, and welcome Fear.
She's too good to let me die;
Why, oh, why should I despair?"

APPENDIX TO LETTER C. No. I.

VOL. III. Page 450.

* * [CHATTERTON (THOMAS), a youth of a very extraordinary genius, was born of a family in no respect illustrious; but which is more nearly connected with some of the circumstances of his literary history than that of most other votaries of the Muses. It appears that the office of Sexton of St. Mary Redcliffe, in Bristol, had continued in different branches of this family for more than one hundred and fifty years; and that John Chatterton, the last of the name who enjoyed that office, was elected in March 1725, and continued Sexton till his death, which happened in the year 1748 (a). Thomas Chatterton, the nephew of the preceding, and father to the extraordinary person who is the subject of these memoirs, had, we are informed, been in the early part of life in the station of a writing usher to a classical school (b), was afterwards engaged as a singing man of the Cathedral of Bristol, and latterly was Master of the Free School in Pyle-street in the same city (c). He died in August 1752, leaving his wife then pregnant of a son, who was born on the twentieth of November, and baptized the first of January following, by the name of THOMAS, at St. Mary Redcliffe, by the Rev. Mr. Gibbs, Vicar of that Church.

The life of Chatterton, though short, was eventful: it commenced as it ended, in indigence and misfortune. By the premature loss of his father he was deprived of that careful attention which would probably have conducted his early years through all the difficulties that circumstances or disposition might oppose to the attainment of knowledge; and by the unpromising aspect of his infant faculties he was excluded a seminary, which might have afforded advantages superior to those he afterwards enjoyed. His father had been succeeded in the school at Pyle-street by a Mr. Love, and to his care Chatterton was committed at the age of five years. But either his faculties were not yet opened, or the waywardness of genius, which will pursue only such objects as are self-approved, incapacitated him from receiving instruction in the ordinary methods; and he was remanded to his mother as a dull boy, and incapable of improvement (e). Nothing is more fallacious than the judgments which are formed during infancy of the future abilities of youth. Mrs. Chatterton was rendered extremely unhappy by the apparently tardy understanding of her son, till *he fell in love*, as she expressed herself, with the illuminated capitals of an old musical manuscript, in French, which enabled her, by taking advantage of the momentary passion, to initiate him in the alphabet (f). She taught him afterwards to read from an old black-lettered Testament, or Bible (g). Perhaps the bent of most men's studies may, in some measure, be determined by accident, and frequently in very early life; nor is it unreasonable to suppose that his peculiar attachment to antiquities may, in a considerable degree, have resulted from this little circumstance.

We are not informed by what means or by what recommendation he gained admission into Colston's Charity-school; but doubtless, in the situation of his mother at the time, it must have been a most desirable event; however unsuitable such a course of discipline might be to the improvement of Chatterton's peculiar talents. Most of those prodigies of genius, who had hitherto astonished mankind, by the early display of abilities and learning, had been aided by the advantage of able instructors, or had at least been left at liberty to pursue the impulse of their superior understandings. It was the lot of Chatterton to be confined to the mechanical drudgery of a charity-school; and the little ordinary portions of leisure, with which boys in his situation are indulged, was the only time allowed him to lay the foundation of that extensive and abstruse erudition which decorated even his early years. This seminary, founded by Edward Colston, Esq; is situate at St. Augustine's Back in Bristol, and is much upon the same plan with Christ's Hospital in London, (the only plan perhaps on which a charity-school can be generally useful,) the boys being *boarded* in the house, clothed, and taught reading, writing, and arithmetic. Chatterton, at this period, wanted a few months of eight years of age, being admitted on the third of

(a) Dr. Milles's Preliminary Dissertation to Rowley's Poems, page 6.

(b) On the authority of a letter signed G. B. dated Bristol, Aug. 30, 1778, printed in the St. James's Chron. In Dr. Milles's Prelim. Diff. it is 1761; but this must be a misprint, as all agree that he was between seven and eight years old when admitted.

August 1760 (b). The rules of this institution are strict. The school hours in summer are from seven o'clock till twelve in the morning, and from one till five in the afternoon; and in winter, from eight to twelve, and from one to four. The boys are obliged to be in bed every night in the year at eight o'clock, and are never permitted to be absent from school, except on Saturdays and Saints days, and then only from between one and two in the afternoon till between seven and eight in the evening. The detail of these apparently trivial particulars may at present favour of a culpable minuteness; but their importance will be experienced before I have concluded.

The first years of his residence at this seminary passed without notice, and perhaps without effort. His sister, indeed, in her letter to Mr. Croft, remarks, that he very early discovered a thirst for pre-eminence, and that even before he was five years old he was accustomed to preside over his play-mates [A]. There is a curious letter from Mr. Thistlethwaite of Bristol, published by Dr. Milles in his edition of Rowley's Poems, which contains many interesting particulars concerning Chatterton. In the summer of 1763, Mr. Thistlethwaite, who was then very young, contracted an intimacy with one Thomas Philips [B], an Usher or Assistant-master at Colston's school. Though the education of Philips, had not been the most liberal, he yet possessed a taste for history and poetry; and by his attempts in verse, excited a degree of literary emulation among the elder boys. It is very remarkable, that Chatterton is said to have appeared altogether as an idle spectator of these poetical contests: he simply contented himself with the sports and pastimes which appeared more immediately adapted to his age; he apparently possessed neither inclination nor ability for literary pursuits, nor does Mr. Thistlethwaite believe that he attempted a single couplet during the first three years of his acquaintance with him (k). Whatever grounds Mr. Thistlethwaite might have for this opinion, it, however, only serves to furnish an additional proof of the deceitfulness of those conjectures which are formed concerning the abilities of youth. The pert and forward boy, of active, but superficial talents, generally bears away the palm from the modesty and pensiveness of genius. Such a disposition, which is in reality the result of insensibility, too frequently meets with encouragement, which produces indolence, impudence, and dissipation; while the less shewy, but more excellent understandings, are depressed by neglect, or disheartened by discouragement. Chatterton, doubtless, at that very period, was possessed of a vigour of understanding, of a quickness of penetration, a boldness of imagination, far superior to the talents of his companions. But that penetration itself led him, perhaps, to feel more strongly his own deficiencies. Those delicate, yet vivid feelings which usually accompany real abilities, induced him to decline a contest, in which there was a danger of experiencing the mortification of being inferior. If he produced any compositions, his exquisite taste led him to suppress them. In the mean time he was laying in stores of information, and improving both his imagination and his judgment. About his tenth year he acquired a taste for reading; and out of the trifle, which was allowed him by his mother for pocket-money, he began to hire books from a circulating library. As his taste was different from children of his age, his dispositions were also different. Instead of the thoughtless levity of childhood, he possessed the gravity, pensiveness, and melancholy of maturer life. His spirits were uneven: he was frequently so lost in contemplation, that for many days together he would say very little, and apparently by constraint. His intimates in the school were few, and those of the most serious cast. Between his eleventh and twelfth year, he wrote a Catalogue of the Books he had read, to the number of seventy. It is rather unfortunate that this Catalogue was not preserved: his sister only informs us that they principally consisted of history and divinity (l). At the hours allotted him for play, he generally retired to read, and he was particularly solicitous to borrow books (m). Though he does not appear to have manifested any violent inclination to display his abilities, yet we have undoubted proofs that very early in life, he did not fail to exercise himself in composition. His sister having made him a present of a pocket-book as a New-Year's gift, he returned it to her at the end of the year filled with writing, chiefly poetry (n). It was probably from the remains of this pocket-book, that the author of Love and Madness transcribed a poem, which appears by the date (April 14th, 1764) to have been written at the age of eleven years and a half [C]. This fact is certainly

(k) Milles's Rowley, p. 454.

(l) Mrs. Newton's Letter in Love and Madness.

(m) Dr. Milles's Prelim. Diff. p. 5.

(n) Mrs. Newton's Letter.

[A] *He was accustomed to preside over his play-mates.* There is an anecdote of Chatterton (it is given, however, only on a vague and indistinct report) partly to the same purpose. When very young, a manufacturer promised to make Mrs. Chatterton's children a present of some earthen-ware. On asking the boy what device he would have painted on his—"Paint me (said he) an angel, with wings, and a trumpet, to trumpet my name over the world (1)."

(1) Love and Madness, p. 161.

[B] *With one Thomas Philips.* In all probability the person on whose death Chatterton composed an Elegy. I wish we were possessed of more perfect memoirs of Philips. His taste for poetry excited a similar flame in several young men, who made no mean figure in the periodical publications of that

day, in Chatterton, Thistlethwaite, Cary, Fowler, and others.

[C] *Which appears to have been written at the age of eleven years and a half.* It may not be improper to produce this Poem, not only as it is the earliest existing specimen of Chatterton's compositions, but also for the sake of some remarks, which will probably throw some light on the genius and character of its author.

APOSTATE WILL, by T. C.

In days of old, when Wesley's pow'r
Gather'd new strength by every hour;
Apostate Will just sunk in trade,
Resolv'd his bargain should be made;

Then

tainly a strong contradiction to Mr. Thistlethwaite's assertion; yet perhaps it is not on the whole so difficult to be reconciled as may at first be suspected. In the registers of the memory, a few months is but a trifling anachronism. Besides, though Chatterton might compose at that time, it does not follow that he was under any necessity of imparting his compositions to Mr. Thistlethwaite or Mr. Philips. Indeed, he was the less likely to make them public, as they were of the satirical kind, and consequently, if discovered, the boy might be apprehensive of exposing himself to punishment.

(o) Mrs. Newton's Letter.

At twelve years old he was confirmed by the Bishop: His sister adds, that he made very sensible and serious remarks on the awfulness of the ceremony, and on his own feelings preparatory to it (o). Happy had it been for him if these sentiments, so congenial to the amiable dispositions of youth, had continued to influence his conduct during his maturer years. He soon after, during the week in which he was door-keeper, made some verses on the last day, paraphrased the ninth chapter of Job, and some chapters of Isaiah. The bent of his genius, however, more strongly inclined him to satire, of which he was tolerably lavish on his school-fellows; nor did the Upper-master, Mr. Warner, escape the rod of his reprehension. The first poetical essays of most young authors are in the pastoral style, when the imagination is luxuriant, the hopes and contemplations romantic, and when the mind is better acquainted with the objects of nature and of the fight than with any other. But Chatterton, without the advantages of education or encouragement, and, on these accounts, diffident perhaps of his own powers, wanted the stimulative of indignation to prompt him to action; and a quickness of resentment appears through life to have been one of his most distinguishing characteristics [D]. From what has been related, it is probable that Chatterton was no great favourite with Mr. Warner: he, however, found a

Then strait to Wesley he repairs,
And puts on grave and solemn airs;
Then thus the pious man address'd,
Good Sir, I think your doctrine best,
Your servant will a Wesley be,
Therefore the principles teach me.
The preacher then instructions gave,
How he in this world should behave,
He hears, assents, and gives a nod,
Says every word's the word of God.
Then lifting his dissembling eyes,
How blessed is the sect he cries,
Nor Bingham, Young, nor Stillingfleet
Shall make me from this sect retreat.
He then his circumstance declar'd,
How hardly with him matters far'd,
Begg'd him next meeting for to make
A small collection for his sake;
The preacher said, do not repine,
The whole collection shall be thine.
With looks demure and cringing bows,
About his business strait he goes;
His outward acts were grave and prim,
The Methodist appear'd in him.
But, be his outward what it will,
His heart was an Apostate's still;
He'd oft profess an hallow'd flame,
And every where preach'd Wesley's name;
He was a preacher and what not,
As long as money could be got;
He'd oft profess with holy fire,
The labourer's worthy of his hire.

It happen'd once upon a time,
When all his works were in their prime,
A noble place appear'd in view,
Then—to the Methodists, adieu:
A Methodist no more he'll be,
The Protestants serve best for *he*:
Then to the curate strait he ran,
And thus address'd the rev'rend man;
I was a Methodist, 'tis true,
With penitence I turn to you;
O that it were your bounteous will
That I the vacant place might fill!
With justice I'd myself acquit,
Do every thing that's right and fit.
The curate straitway gave consent—
To take the place he quickly went.
Accordingly he took the place,
And keeps it with dissembled grace.

April 14, 1764.

In the first place, this Poem shews the early turn and bent of his genius to satire, which predominated throughout his short life, and with which he began and ended his literary career. Not only his school-fellows and his instructors became the subjects of it at this early period, but his acquaintance and his friends felt its force.

In the next place, it appears that he was then no stranger to the works of Bingham, Young, and Stillingfleet, which were probably among the books of divinity that composed the list of those he had read or consulted, as mentioned in Mrs. Newton's Letter.

Lastly, let it be observed, that the person he satirizes is supposed to have turned methodist for mercenary motives, and to have preached the gospel merely to put money in his purse.—Now Mr. Thistlethwaite, in his letter to Dean Milles, after mentioning Chatterton's intentions of leaving his master's service and going to London, says—"I interrogated him as to the objects of his views and expectations, and what mode of life he intended to pursue on his arrival at London. The answer I received was a memorable one: My first attempt, said he, shall be in the literary way; the promises I have received are sufficient to dispel doubt; but should I, contrary to my expectations, find myself deceived, I will in that case turn Methodist preacher. Credulity is as potent a deity as ever, and a new sect may easily be devised," &c.

(2) Milles's Rowley, p. 459.

Chatterton might in some measure have in view the character which he had before so successfully depicted, when he thus expressed himself to Mr. Thistlethwaite. As his genius was versatile, and his reading extensive, it is possible this profession might not be without some serious foundation. Indeed, if we are to believe that the fragment of a sermon, which he produced as Rowley's, was really his own composition, certainly many a quack preacher sets out upon a much slenderer stock of divinity than Chatterton was master of at that time. The imagination, however, forms many schemes which the heart wants fortitude to reduce to action; and perhaps, after all, his declaration to Mr. T. might be no more than a temporary piece of gaiety, and that he might still, though released from religious scruples, abhor the dishonourable character of a hypocrite.

[D] *Appears through life to have been one of his most distinguishing characteristics.* A late French writer, in his Memoirs of the Poet De la Harpe, who had manifested a like turn for satire in his early years, says—"La satire est la premiere qualité qui se developpe ordinairement dans un jeune poete. Celui se l'exerce d'une façon ridicule envers ses maitres & meme envers M. Assalin."

friend in the Under-master, Mr. Haynes, who conceived for him, I have been informed, a strong and affectionate attachment.

"A very remarkable fact is recorded by Mr. Thistlethwaite in the letter already quoted. "Going down Horse-street, near the school, one day," says he, "I accidentally met with Chatterton. Entering into conversation with him, the subject of which I do not now recollect, he informed me that he was in the possession of certain old manuscripts, which had been found deposited in a chest in Redcliffe church, and that he had lent some or one of them to Philips. Within a day or two after this I saw Philips, and repeated to him the information I had received from Chatterton. Philips produced a manuscript on parchment or vellum, which I am confident was Elenoure and Juga (*p*), a kind of pastoral eclogue, afterwards published in the Town and Country Magazine for May 1769. The parchment or vellum appeared to have been closely pared round the margin; for what purpose, or by what accident, I know not, but the words were evidently entire and unmutated. As the writing was yellow and pale, manifestly (as I conceive) occasioned by age, and consequently difficult to decypher, Philips had with his pen traced and gone over several of the lines, (which, as far as my recollection serves, were written in the manner of prose, and without any regard to punctuation,) and by that means laboured to attain the object of his pursuit, an investigation of their meaning. I endeavoured to assist him: but from an almost total ignorance of the characters, manners, language, and orthography of the age in which the lines were written, all our efforts were unprofitably exerted; and though we arrived at the explanation of, and connected many of the words, still the sense was notoriously deficient (*q*)."

If this narrative may be depended on, Chatterton had discovered these manuscripts before he was twelve years of age. It is, however, scarcely consistent with other accounts, since both Mrs. Chatterton and her daughter seem to be of opinion, that he knew nothing of the parchments brought from Redcliffe Church, which were supposed to contain Rowley's poems, till after he had left school (*r*). Under all the disadvantages of education, the acquisitions of Chatterton were surprising. Besides the variety of reading which he had gone through, the author of *Love and Madness* remarks, that he had some knowledge of music (*s*). Is it not probable that a few of the rudiments of vocal music made a part of the education of a charity boy? He had also acquired a taste for drawing, which afterwards he greatly improved; and the Usher of the school asserted he had made a rapid progress in arithmetic (*t*). Soon after he left school, he corresponded with a boy, who had been his bed-fellow while at Colston's, and was bound apprentice to a Merchant at New-York [*D*]. Mrs. Newton says, he read a letter at home, which he wrote to this friend: it consisted of a collection of all the hard words in the English language, and he requested his friend to answer it in the same style. An extraordinary effect of his discovering an employment adapted to his genius is remarked in the same letter. He had been gloomy from the time he began to learn, but it was observed that he became more cheerful after he began to write poetry (*u*).

(*p*) See Rowley's Poems, p. 19, 3d edit.

(*q*) Milles's Rowley.

(*r*) Milles's Prelim. Diss. p. 5. There appears good reason for suspecting some mistake in Mr. Thistlethwaite's narrative, either as to the date, or some other circumstance.
(*s*) *Love and Madness*, p. 167.
(*t*) *Ibid.* p. 161.

(*u*) Milles's Prelim. Diss. p. 5.

On the first of July 1767, he left the Charity-school, and was bound apprentice to Mr. John Lambert, Attorney, of Bristol, for seven years, to learn the art and mystery of a scrivener. The apprentice fee was ten pounds; the master was to find him in meat, drink, lodging, and clothes; the mother in washing and mending. He slept in the same room with the foot-boy, and went every morning at eight o'clock to the office, which was at some distance, and, except the usual time for dinner, continued there till eight o'clock at night, after which he was at liberty till ten, when he was always expected to be at home. Mr. Lambert affords the most honourable testimony in Chatterton's favour, with respect to the regularity of his attendance, as he never exceeded the limited hours but once, when he had leave to spend the evening with his mother and some friends (*w*). His hours of leisure also Mr. Lambert had no reason to suspect were spent in improper company, but generally with his mother, Mr. Clayfield, Mr. Barrett, or Mr. Catcott. He never had occasion to charge him with neglect of business, or any ill behaviour whatever. Once, and but once, he thought himself under the necessity of correcting him, and that was the pure effect of his disposition for satire. A short time after he was bound to Mr. Lambert, his old School-master received a very abusive anonymous letter, which he suspected came from Chatterton, and he complained of it to his master, who was soon convinced of the justice of the complaint, not only from the hand-writing, which was ill-disguised [*F*], but from the letter being written on the same paper with that which was used in the office. On this occasion Mr. Lambert corrected the boy with a blow or two. He, however, accuses him of a fullen and gloomy temper, which particularly displayed itself among the servants (*x*). Chatterton's superior abilities, and superior information, with the pride which usually accom-

(*w*) Mrs. Newton's Letter above quoted.

(*x*) From the information of Mr. Lambert to a friend of the author.

[*E*] *Bound Apprentice to a Merchant at New-York.* At the desire of this friend, he wrote love verses to be transmitted to him, and exhibited as his own. It is remarkable, that when first questioned concerning the old poems, he said he was engaged to transcribe them for a Gentleman, who also employed him to write verses on a Lady with whom he was in love.

[*F*] *Which was ill-disguised.* This circumstance is not unworthy of notice. If Chatterton was really the forger of the MSS. attributed to Rowley, how came he in this instance to be unable to disguise his own hand-writing?

panies

panies these qualities, doubtless rendered him an unfit inhabitant of the kitchen, where his ignorant associates would naturally be inclined to envy, and would affect to despise those accomplishments, which he held in the highest estimation: and even the familiarity of vulgar and illiterate persons, must undoubtedly be rather disgusting than agreeable to a mind like his.

(y) Mrs. Newton's Letter above quoted.

Mr. Lambert's was a situation not unfavourable to the cultivation of his genius. Though much confined, he had much leisure. His master's business consumed a very small portion of his time: frequently, his sister says, it did not engage him about two hours in a day (y). While Mr. Lambert was from home, and no particular business interfered, his stated employment was to copy precedents; a book of which, containing 344 large folio pages, closely written by Chatterton while he remained in the office, is, I believe, still in the possession of Mr. Lambert, as well as another of about thirty pages. The office library contained nothing but law books; except an old edition of Camden's Britannia. There is no doubt, however, but Chatterton took care amply to supply his mental wants from his old acquaintance at the circulating libraries.

He had continued this course of life for upwards of a year; not, however, without some symptoms of an aversion for his profession, before he began to attract the notice of the literary world. In the beginning of October 1768, the new bridge at Bristol was finished. At that time there appeared, in Farley's Bristol Journal, an account of the ceremonies on opening the old bridge, introduced by a letter to the printer, intimating that "The following description of *the Fryars first passing over the old bridge*, was taken from an ancient manuscript," and signed "Dunhelmus Bristolienfis [G]." The paper, if it be allowed to be the fabrication of modern times, demonstrates strong powers of invention, and an uncommon knowledge of ancient customs. So singular a memoir could not fail to excite curiosity, and many persons became anxious to see the original. The printer, Mr. Farley, could give no account of it, nor of the person who brought the copy; but after much inquiry, it was discovered that the manuscript was brought by a youth between fifteen and sixteen years of age, of the name of Thomas Chatterton (z). "To the threats of those who treated him (agreeably to his appearance) as a child, he returned nothing but haughtiness, and a refusal to give any account (a)." By milder usage he was somewhat softened, and appeared inclined to give all the information in his power. He at first alledged, that he was employed to transcribe the contents of certain ancient manuscripts by a Gentleman, who also had engaged him to furnish complimentary verses, inscribed to a Lady with whom that Gentleman was in love. On being farther pressed, he at last informed the inquirers, that he had received the paper in question, together with many other manuscripts, from his father, who had found them in a large chest in the upper room over the chapel, on the North side of Redcliffe Church (b). But a still more circumstantial account of the discovery of these manuscripts, is preserved in Mr. Bryant's Observations on Rowley's Poems. Over the North porch of St. Mary Redcliffe Church, which was founded, or at least rebuilt, by Mr. W. Canynge, (an eminent Merchant of Bristol in the fifteenth century, and in the reign of Edward the Fourth), there is a kind of monument room, in which were deposited six or seven chests, one of which in particular was called

(b) See Mr. Catcott's account in the preface to Rowley's poems.

[G] And signed "Dunhelmus Bristolienfis."

"Description of the Fryars passing over the Old Bridge, taken from an ancient manuscript.

"On Fridaie was the time fixed for passing the new-brydge. About the time of tollynge the tenth clocke, Master Greggoire Dalbenye mounted on a fergreyne horse, informed Master Maier all thynges were prepared, when two Beadils went first streying stre. Next came a manne dressed up as follows, hose of gootskyne crinepart outwards, doublette & waicot, also over which a white robe without sleeves, much like an albe but not so long, reachinge but to his hands. A girdle of azure over his left shoullder, rechede also to his hands on the right & doubled back to his left, bucklynge with a goulden buckle dangled to his knee, thereby representinge a Saxon earlderman.

"In his hands he bare a shield, the maistre of Gille a Brogton, who painted the same, representing Sainte Warburgh crossing the soorde; then a mickle strong man in armour, carried a huge anlace, after whom came six claryons and six minstrels, who song the song of Sainte Warburgh. Then came Master Maier mounted on a white horse dyght with sable trappynge wrought about by the Nunnes of Saint Kenna, with gould and silver, his hayre braded with ribbons & a chaperon with the auntient armes of Bristowe fastened on

his forehead. Master Maier bare in his hande a goulden rodde, & a congean squire bare in his hande his helmet, waulkinge by the syde of the horse. Then came the earlderman & city broders, mounted on sabyell horses dyght with white trappynge & plumes & scarlet caps & chaperons having thereon sable plumes; after them, the preefts & frears, parish mendicant & secular, some syngynge Sainte Warburghs songe, others soundynge clarions thereto & others some citrallles.

"In thilke manner reachynge the brydge the manne with the anlace stode on the fyrst top of a mounde, yreed in the midst of the brydge, then went up the manne with the sheelde, after him the minstrels & clarions; and then the preefts & freeres all in white albes, making a most goodly shewe, the maier & earldermen standinge rounde, they songe with the sound of claryons, the songe of Sainte Baldwyne, which being done, the manne on the top threw with great myght his anlace into the sea & the clarions founded an auncient charge & forloyne. Then theie song again the song of Sainte Warburge, & proceeded up Xts hill to the crosse, where a Latin sermon was preached by Ralph de Blunderville, & with sound of clarion theye againe went to the brydge and there dined, spendynge the rest of the daye in sports and plaies, the freers of Sainte Augustyne doing the play of the knights of Bristow meekynge a great fire at night on Kynslate hill."

Mr. Canynge's cofre [H]. This chest, it is said, was secured by six keys, two of which were entrusted to the Minister and Procurator of the Church, two to the Mayor, and one to each of the Church-wardens. In process of time, however, the six keys appear to have been lost; and about the year 1727, a notion prevailed that some title deeds, and other writings of value, were contained in Mr. Canynge's cofre. In consequence of this opinion, an order of vestry was made, that the chest should be opened under the inspection of an attorney; and that those writings which appeared of consequence, should be removed to the south porch of the church. The locks were therefore forced, and not only the principal chest, but the others, which were also supposed to contain writings, were all broken open. The deeds immediately relating to the church were removed, and the other manuscripts were left exposed as of no value. Considerable depredations had, from time to time, been committed upon them, by different persons; but the most insatiate of these plunderers was the father of Chatterton. His uncle's being Sexton of St. Mary Redcliffe gave him free access to the church. He carried off, from time to time, parcels of the parchments, and one time alone, with the assistance of his boy, is known to have filled a large basket with them. They were deposited in a cupboard in the school, and employed for different purposes, such as the covering of copy books, &c. In particular, Mr. Gibbs, the Minister of the parish, having presented the boys with twenty Bibles, Mr. Chatterton, in order to preserve these books from being damaged, covered them with some of the parchments. At his death, the widow being under a necessity of removing, carried the remainder of them to her own habitation. Of the discovery of their value by the younger Chatterton, the account of Mr. Smith, a very intimate acquaintance, which he gave to Dr. Glynn of Cambridge, is too interesting to be omitted. "When young Chatterton was first articled to Mr. Lambert, he used frequently to come home to his mother, by way of a short visit. There, one day, his eye was caught by one of these parchments, which had been converted into a thread-paper. He found not only the writing to be very old, the characters very different from common characters, but that the subject therein treated was different from common subjects. Being naturally of an inquisitive and curious turn, he was very much struck with their appearance, and, as might be expected, began to question his mother what those thread-papers were, how she got them, and whence they came. Upon farther enquiry, he was led to a full discovery of all the parchments which remained (c)." The bulk of them consisted of poetical and other compositions, by Mr. Canynge, and a particular friend of his, Thomas Rowley, whom Chatterton at first called a Monk, and afterwards a Secular Priest of the fifteenth century. Such, at least, appears to be the account which Chatterton thought proper to give, and which he wished to be believed. It is, indeed, confirmed by the testimony of his mother and sister. Mrs. Chatterton informed a friend of the Dean of Exeter, that on her removal from Pyle-street, she emptied the cupboard of its contents, partly into a large long deal box, where her husband used to keep his clothes, and partly into a square oak box of a smaller size; carrying both with their contents to her lodgings, where, according to her account, they continued neglected and undisturbed, till her son first discovered their value; who having examined their contents, told his mother, 'that he had found a treasure, and was so glad nothing could be like it:' that he then removed all these parchments out of the large long deal box, in which his father used to keep his clothes, into the square oak box: that he was perpetually ransacking every corner of the house for more parchments, and, from time to time, carried away those he had already found by pockets full: that one day happening to see Clarke's History of the Bible covered with one of those parchments, he swore a great oath, and stripping the book, put the cover into his pocket, and carried it away; at the same time stripping a common little Bible, but finding no writing upon the cover, replaced it again very leisurely (d). "Upon being informed of the manner in which his father had procured the parchments, he went himself to the place, and picked up four more, which, if Mrs. Chatterton rightly remembers, Mr. Barrett has at this time in his possession (e)." "Mrs. Newton, his sister, being asked, if she remembers his having mentioned Rowley's poems, after the discovery of the parchments; says, that he was perpetually talking on that subject, and once in particular, (about two years before he left Bristol) when a relation, one Mr. Stephens of Salisbury, made them a visit, he talked of nothing else (f)." Nearly about the time when the paper in Farley's Journal, concerning the old bridge, became the subject of conversation, as Mr. Catcott of Bristol, a Gentleman of an inquisitive turn, and fond of reading, was walking with a friend in Redcliffe church, he was informed by him of several ancient pieces of poetry, which had been found there, and which were in the possession of a young person with whom he was acquainted. This person proved to be Chatterton, to whom Mr. Catcott desired to be introduced. He accordingly had an interview; and soon after obtained from him, very readily, without any reward, the Bristow

[H] Was called *Mr. Canynge's cofre*.] When rents were received and kept in specie, it was usual for corporate bodies to keep the writings and rents of estates left for particular purposes, in chests appro-

priated to each particular benefaction, and called by the benefactor's name. Several old chests of this kind are still existing in the University of Cambridge. O.

Tragedy,

(g) See Rowley's Poems, p. 44.

Tragedy (g), Rowley's Epitaph upon Mr. Canynge's ancestor (b), with some other smaller pieces. In a few days he brought some more, among which was *the Yellow Roll*. About this period, Mr. Barrett, a respectable Surgeon in Bristol, and a man of letters, had projected a history of his native city, and was anxiously collecting materials for that work. Such a discovery, therefore, as that of Chatterton, could scarcely escape the vigilance of Mr. Barrett's friends. The pieces in Mr. Catcott's possession, of which some were copies and some originals, were immediately communicated to Mr. Barrett, whose friendship and patronage by these means our young literary adventurer was fortunate enough to secure. During the first conversations which Mr. Catcott had with him, he heard him mention the names of most of the poems since printed, as being in his possession. He afterwards grew more suspicious and reserved; and it was but rarely, and with difficulty, that any more originals could be obtained from him. He confessed to Mr. Catcott that he had destroyed several; and some which he owned to have been in his possession, were never afterwards seen. One of these was the tragedy of the Apostate, of which a small part only has been preserved by Mr. Barrett. The subject of it was the apostatizing of a person from the Christian to the Jewish faith (i). Mr. Barrett, however, obtained from him at different times several fragments, some of them of a considerable length. They are all written upon vellum, and he asserted them to be a part of the original manuscripts, which he had obtained in the manner which has been already related. A *fac simile* of one of these fragments is published in Mr. Tyrwhitt's and Dr. Milles's editions of Rowley's Poems; and the fragments in prose, which are considerably larger, we are taught to expect in Mr. Barrett's History of Bristol. In the same work we are also promised "*A Discourse on Bristowe*," and the other historical pieces in prose, which Chatterton at different times delivered out, as copied from Rowley's manuscripts (k)."

(i) Bryant's Obs. p. 517.

The friendship of Mr. Barrett and Mr. Catcott was of considerable advantage to Chatterton. They supplied him occasionally with money, as a compensation for some of the fragments of Rowley, with which he gratified them [I]. He spent many agreeable hours in their company; and their acquaintance introduced him into a more respectable line than he could easily have attained without it. His sister remarks, that after he was introduced to these Gentlemen, his ambition daily and perceptibly encreased; and he would frequently speak in raptures of the undoubted success of his plan for future life. "When in spirits, he would enjoy his rising fame; and, confident of advancement, he would promise his mother and I should be partakers of his success (l)." Both these Gentlemen also lent him books. Mr. Barrett lent him several medical authors (m), and, at his request, gave him some instructions in surgery. His taste was versatile, and his studies various. In the course of the years 1768 and 1769, Mr. Thistlethwaite frequently saw him, and describes in a lively manner the employment of his leisure hours. "One day," says Mr. T. "he might be found busily employed in the study of heraldry and English antiquities, both of which are numbered among the most favourite of his pursuits; the next discovered him deeply engaged, confounded and perplexed amidst the subtleties of metaphysical disquisition, or lost and bewildered in the abstruse labyrinth of mathematical researches; and these in an instant again neglected and thrown aside, to make room for music and astronomy, of both which sciences his knowledge was entirely confined to theory. Even physic was not without a charm to allure his imagination, and he would talk of Galen, Hippocrates, and Paracelsus, with all the confidence and familiarity of a modern empirick (n)." It may naturally be supposed, that his acquaintance with most of these sciences was very superficial; but his knowledge of antiquities was extensive, and we might perhaps say profound. With a view of perfecting himself in these favourite studies, he borrowed Skinner's Etymologicon of Mr. Barrett, but returned it in a few days as useless, most of the interpretations being in Latin. He also borrowed Benson's Saxon Vocabulary, but returned it immediately on the same account (o). His disappointment was partly compensated by the acquisition of Kersey's Dictionary, and Speght's Chaucer, (the Glossary to which he carefully transcribed (p)). With these books he was furnished by Mr. Green, a Bookseller in Bristol. Probably the mortification he received at not being able to make that use which he desired of Skinner and of Benson, might be an additional stimulative to the great inclination which he manifested to acquaint himself with Latin, and his design to attempt it without a master. From this project his friend, Mr. Smith, took great pains to dissuade him, and advised him rather to apply to French, a competent knowledge of which might be sooner attained, and which promised to be of more essential service (q). Whatever plan he adopted, he entered upon it with an earnestness and fervour almost unexampled. Indeed, the poetic enthusiasm was never more strongly exhibited than in Chatterton. Like Milton, he fancied he was more capable of writing well at some particular times than at others, and the full of the moon was the season when he imagined his genius to be in per-

(k) Preface to Rowley's Poems, p. 11. It is now said that Mr. B. does not mean to insert any of these pieces in his History.

[I] *With which he gratified them.* Some of his later compositions, however, demonstrate, that he was not thoroughly satisfied with his Bristol patrons; and Mr. Thistlethwaite does not hesitate to assert,

that he felt himself greatly disappointed in his expectations of pecuniary rewards for his communications. K.

fection;

fection; at which period, as if the immediate presence of that luminary added to the inspiration, he frequently devoted a considerable portion of the night to composition (r).—“He was always,” says Mr. Smith, “extremely fond of walking in the fields, particularly in Redcliffe meadows, and of talking about these (Rowley’s) manuscripts, and sometimes reading them there. “Come (he would say) you and I will take a walk in the meadow. I have got the cleverest thing for you imaginable. It is worth half-a-crown merely to have a sight of it, and to hear me read it to you.” When we arrived at the place proposed, he would produce his parchment, shew it and read it to me. There was one spot in particular, full in view of the church, in which he seemed to take a peculiar delight. He would frequently lay himself down, fix his eyes upon the church, and seem as if he were in a kind of trance. Then, on a sudden and abruptly, he would tell me, “that steeple was burnt down by lightning: that was the place where they formerly acted plays (s).” His Sundays were commonly spent in walking alone into the country about Bristol, as far as the duration of day-light would allow; and from these excursions he never failed to bring home with him drawings of churches, or of some other objects, which had impressed his romantic imagination [K].

(s) Bryant’s Obs.
p. 530.

(r) Mr. Newton’s letter to Mr. C.

His attention, while at Bristol, was not confined to Rowley: his pen was exercised in a variety of pieces, chiefly satirical, and several essays, both in prose and verse, which he sent to the Magazines. I have not been able to trace any thing of Chatterton’s in the Town and Country Magazine (with which he appears to have first corresponded) before February 1769; but in the acknowledgments to correspondents for November 1768, we find “D. B. of Bristol’s favour will be gladly received.” *Dunhelmus Bristolienfis* was the signature he generally employed. In the course of the year 1769, he was a considerable contributor to that publication. One of the first of his pieces which appeared was a letter on the tinctures of the Saxon heralds, dated Bristol, February 4; and in the same Magazine a poem was inserted on Mr. Alcock, of Bristol, an excellent Miniature Painter, signed *Asaphides* [L]. In the same Magazine for March are some extracts from Rowley’s manuscripts; and in different numbers for the succeeding months, some pieces called Saxon Poems, written in the style of Ossian.

The whole of Chatterton’s life presents a fund of useful instruction to young persons of brilliant and lively talents, and affords a strong dissuasive against that impetuosity of expectation, and those delusive hopes of success, founded upon the consciousness of genius and merit, which lead them to neglect the ordinary means of acquiring competence and independence. The early disgust which Chatterton conceived for his profession, may be accounted one of the prime sources of his misfortunes. Among the efforts which he made to extricate himself from this irksome situation, the most remarkable is his application to the Hon. Horace Walpole, in March 1769 (t); the ground of which was an offer to furnish him with some accounts of a series of great painters, who had flourished at Bristol, which Chatterton said had been lately discovered, with some old poems, in that city. The packet sent by Chatterton was left at Bathurst’s, Mr. Walpole’s Bookseller, and contained, beside this letter, an ode or little poem, of two or three stanzas in an alternate rhyme, on the death of Richard I. as a specimen of the poems which were found. Mr. Walpole had but just before been made the instrument of introducing into the world Mr. M’Pherson’s forgeries: a similar application, therefore, served at once to awaken his suspicion. He, however, answered Chatterton’s letter, desiring farther information; and in reply, was informed, that “he (Chatterton) was the son of a poor widow, who supported him with great difficulty; that he was apprentice to an Attorney, but had a taste for more elegant studies.” The letter hinted a wish that Mr. Walpole would assist him in emerging from so dull a profession, by procuring some place, in which he might pursue the natural bias of his genius. He affirmed that great treasures of ancient poetry had been discovered at Bristol, and were in the hands of a person who had lent him the specimen already transmitted, as well as a pastoral (*Elinoure and Juga*) which accompanied this second letter. Mr. Walpole wrote to a friend, a noble Lady at Bath, to enquire after the author of these letters, who found his account of himself verified in every particular. In the mean time the specimens were communicated to Mr. Gray and Mr. Mason, and these Gentlemen, at first sight, pronounced them forgeries. Mr. Walpole, though convinced of the author’s intention to impose upon him, could not, as he himself confesses, help admiring the spirit of poetry which animated these compositions. The testimonies of his approbation, however, were too cold to produce in Chatterton any thing but lasting disgust. Mr. Walpole’s reply was indeed (according to his own account) rather too much in the common-place style of Court replies; though some allowance is to be made for his peculiar situation,

(t) Two Letters by the Honourable Horace Walpole, p. 55.

[K] Which had impressed his romantic imagination.] The Dean of Exeter mentions drawings by Rowley of Bristol Castle, which he supposes genuine, but which Mr. Warton reprobates as fictions of Chatterton, the representations of a building which never existed, in a capricious, affected style of Gothic architecture, reducible to no system.

[L] An excellent miniature painter, signed *Asaphides*.] This piece, with two or three others in Chatterton’s Miscellanies, was claimed by John Lockstone, a Linen-Draper in Bristol, a great friend of Chatterton: by his confession, however, it was corrected by the latter.

and

and for his just apprehension of a new imposition to be practised on him. He complained in general terms of his want of power to be a patron, and advised the young man to apply himself to the duties of his profession, as more certain means of attaining the independence and leisure of which he was desirous. This frigid reception extracted immediately from Chatterton, "a peevish letter," desiring the manuscripts back, as they were the property of another; and Mr. Walpole, either offended at the warm and independent spirit which was manifested by the boy, or pleased to be disengaged from the business in so easy a manner, proceeded on a journey to Paris, without taking any farther notice of him. On his return, which was not for some time, he found another epistle from Chatterton, in a style (as he terms it) "singularly impertinent;" expressive of much resentment on account of the detention of his poems, roughly demanding them back, and adding, "that Mr. Walpole would not have *dared* to use him so ill, had he not been acquainted with the narrowness of his circumstances." The consequence was, therefore, such as might be expected. Mr. Walpole returned his poems and his letters in a blank cover, and never afterwards heard from him or of him during his life (*u*). The affront was never forgiven by the disappointed Poet, though it is perhaps more than repaid by the ridiculous portrait which he has exhibited of Mr. W——, in the *Memoirs of a Sad Dog*, under the character of "the redoubted Baron Otranto (*w*), who has spent his whole life in conjectures." (*u*) *Ib. passim* (*w*) Chatterton's Miscel. p. 184.

On the score of these transactions, Mr. Walpole has incurred more censure than he really deserved. In an age when literature is so little patronized by those who wield all the powers of the state, and have in trust for the public the distribution of its emoluments; when men of the first abilities, actually engaged in the learned professions, are permitted to languish in obscurity and poverty, without any of those rewards, which are appropriated to the professions they exercise, and are compelled to depend for a precarious subsistence on the scanty pittance, which they derive from diurnal drudgery in the service of Booksellers, it can scarcely be deemed an instance of extraordinary illiberality that a private man, though a man of fortune, should be inattentive to the petition of a perfect stranger, a young man, whose birth or education entitled him to no high pretensions, and who had only conceived an unreasonable dislike to a profession both lucrative and respectable. If Chatterton had actually avowed the poems, perhaps a very generous and feeling heart, such as rarely exists at present, and least of all in the higher circles of life, might have been more strongly affected with their beauties, and might probably have extended some small degree of encouragement. But considering things as they are, and not as they ought to be, it was a degree of unusual condescension to take any notice whatever of the application; and when Chatterton felt so poignantly his disappointment, he only demonstrated his ignorance of the state of patronage in this country, and acted like a young and ingenuous person, who judged of the feelings of the courtiers by the generous emotions of his own breast, or the practice of times, which exist now only in the records of romance. Mr. Walpole afterwards regretted, and I believe sincerely, that he had not seen this extraordinary youth, and that he did not pay a more favourable attention to his correspondence: but, to be neglected in life, and regretted and admired when these passions can be no longer of service, has been the usual fate of learning and genius. Mr. Walpole was certainly under no obligation of patronizing Chatterton. To have encouraged and befriended him, would have been an exertion of liberality and munificence uncommon in the present day: but to ascribe to Mr. Walpole's neglect (if it can even merit so harsh an appellation) the dreadful catastrophe, which happened at the distance of nearly two years after, would be the highest degree of injustice and absurdity [*M*].

The

[*M*] *Would be the highest degree of injustice and absurdity.*] A learned and respectable friend, on reading these memoirs in manuscript, favoured me with the following able vindication of Mr. W. which, for the satisfaction of those who wish for the fullest information on the subject, I insert entire.

It has already been stated, that, in March 1769, Chatterton, not long after his acquaintance with Mr. Barrett and Mr. Catcott, to whom he had communicated some originals and some transcripts of Rowley's Poems, wrote a letter to Mr. H. Walpole, inclosing also a specimen of the Poems, and soliciting his patronage. Let the reader take the account in Mr. Walpole's own words, from an extract of a letter to Mr. W. B. added to another letter to the Editor of Chatterton's Miscellanies, and printed at Strawberry-hill, 1779.

"I am far from determined to publish any thing about Chatterton. It would almost look like making myself a party. I do not love controversy: if I print, my chief reason would be, that both in the account of the Poems, and in Mr. Warton's

"last volume, my name has been brought in with
"so little circumspection and accuracy, that it looks
"as if my rejection of Chatterton had driven him
"to despair; whereas I was the first person on whom
"he essayed his art and ambition, instead of being
"the last. I never saw him; there was an interval
"of near two years between his application to me
"and his dismal end; nor had he quitted his master,
"nor was necessitous, nor otherwise poor than Attornies clerks usually are; nor had he come to London, nor launched into dissipation, when his correspondence with me stopped. As faithfully as I can recollect the circumstances, without dates, and without searching for what few memorandums I preserved relative to him, I will recapitulate his history with me. Bathurst, my Bookseller, brought me a packet left with him: it contained an ode, or little poem, of two or three stanzas in alternate rhyme, on the death of Richard the First, and I was told, in very few lines, that it had been found at Bristol, with many other old poems, and that the possessor could furnish me with accounts of a

The reader has hitherto contemplated Chatterton in the pleasing light of an ingenious and virtuous youth. I reluctantly proceed to develop the only circumstance which has involved

series of great painters, who had flourished at Bristol.

(5) "Richard of Lyon's Heart to fight is gone."

"Here I must pause, to mention my own reflections. At first I concluded that somebody having met with my Anecdotes of Painting, had a mind to laugh at me; I thought not very ingenuously, as I was not likely to swallow a succession of great Painters at Bristol. The ode, or sonnet (5), as I think it was called, was too pretty to be part of the plan; and, as is easy with all the other supposed poems of Rowley, it was not difficult to make it modern by changing the old words for new, though yet more difficult than with most of them. You see I tell you fairly the case.

(6) Elinoure and Juga.

"I wrote, according to the inclosed direction, for farther particulars. Chatterton, in answer, informed me that he was the son of a poor widow, who supported him with great difficulty; that he was clerk or apprentice to an Attorney, but had a taste and turn for more elegant studies; and hinted a wish that I would assist him with my interest in emerging out of so dull a profession, by procuring him some place, in which he could pursue his natural bent. He affirmed that great treasures of ancient poetry had been discovered in his native city, and were in the hands of a person, who had lent him those he had transmitted to me; for he now sent me others, amongst which was an absolute modern pastoral in dialogue, thinly sprinkled with old words (6). Pray observe, Sir, that he affirmed having received the poems from another person; whereas it is ascertained that the Gentleman at Bristol, who possesses the fund of Rowley's poems, received them from Chatterton.

"I wrote to a relation of mine at Bath, to enquire into the situation and character of Chatterton, according to his own account of himself: nothing was returned about his character, but his story was verified.

"In the mean time I communicated the poems to Mr. Gray and Mr. Mason, who at once pronounced them forgeries, and declared there was no symptom in them of their being the productions of near so distant an age; the language and metres being totally unlike any thing ancient.

"Well, Sir, being satisfied with my intelligence about Chatterton, I wrote him a letter with as much kindness and tenderness as if I had been his guardian; for though I had no doubt of his impositions, such a spirit of poetry breathed in his coinage, as interested me for him; nor was it a grave crime in a young bard to have forged false notes of hand, that were to pass current only in the parish of Parnassus. I undeceived him about my being a person of any interest, and urged, that in duty and gratitude to his mother, who had straitened herself to breed him up to a profession, he ought to labour in it, that in her old age he might absolve his filial debt; and I told him, that when he should have made a fortune, he might unbend himself with the studies consonant to his inclinations. I told him also, that I had communicated his transcripts to better judges, and that they were by no means satisfied with the authenticity of his supposed MSS. He wrote me rather a peevish answer, said he could not contest with a person of my learning, (a compliment by no means due to me, and which I certainly had not assumed, having mentioned my having consulted abler judges,) maintained the genuineness of the poems, and demanded to have them returned, as they were the property of another Gentleman. Remember this.

"When I received this letter, I was going to Paris in a day or two, and either forgot his request of the poems, or perhaps not having time to have them copied, deferred complying till my return, which was to be in six weeks. I protest I do not remember which was the case; and yet, though in a cause of so little importance, I will

not utter a syllable of which I am not positively certain, nor will charge my memory with a tittle beyond what it retains. Soon after my return from France, I received another letter from Chatterton, the style of which was singularly impertinent. He demanded his poems roughly; and added, that I should not have dared to use him so ill, if he had not acquainted me with the narrowness of his circumstances. My heart did not accuse me of insolence to him. I wrote an answer to him, expostulating with him on his injustice, and renewing good advice; but upon second thoughts, reflecting that so wrong-headed a young man, of whom I knew nothing, and whom I had never seen, might be absurd enough to print my letter, I flung it into the fire; and wrapping up both his poems and letters, without taking a copy of either, for which I am now sorry, I returned all to him, and thought no more about him or them, till about a year and a half after, when dining at the Royal Academy, Dr. Goldsmith drew the attention of the company with an account of a marvellous treasure of ancient poems lately discovered at Bristol, and expressed enthusiastic belief in them, for which he was laughed at by Dr. Johnson, who was present. I soon found this was the *trouvaille* of my friend Chatterton; and I told Dr. Goldsmith that this novelty was none to me, who might, if I had pleased, have had the honour of ushering the great discovery to the learned world. You may imagine, Sir, we did not at all agree in the measure of our faith: but though his credulity diverted me, my mirth was soon dashed; for on asking about Chatterton, he told me he had been in London, and had destroyed himself. I heartily wished then that I had been the dupe of all the poor young man had written to me; for who would not have his understanding imposed upon to save a fellow being from the utmost wretchedness; despair and suicide! and a poor young man, not eighteen, and of such miraculous talents; for, dear Sir, if I wanted credulity on one hand, it is ample on the other. Yet heap all the improbabilities you please on the head of Chatterton, the impossibility on Rowley's side will remain. An amazing genius for poetry, which one of them possessed, might flash out in the darkest age; but could Rowley anticipate the phraseology of the eighteenth century? His poetic fire might burst through the obstacles of the times; like Homer, or other original bards, he might have formed a poetical style; but would it have been precisely that of an age subsequent to him by some hundred years? Nobody can admire the poetry of the poems in question more than I do; but except being better than most modern verses, in what do they differ in the construction? The words are old, the construction evidently of yesterday; and, by substituting modern words, *aye*, single words, to the old, or to those invented by Chatterton, in what do they differ? Try that method with any composition, even in prose, of the reign of Henry VI. and see if the consequence will be the same. But I am getting into the controversy, instead of concluding my narrative, which indeed is ended."

Whatever imputation might have lain on Mr. Walpole with regard to the treatment of Chatterton, before these particulars were known, and this narrative appeared, surely there can be no impartial reader of it who will not acquit him of any ill treatment of a person who appeared to him in so questionable a shape; and allow that in Mr. Walpole's situation, he could scarcely have acted otherwise than he did. For what was the case? A youth of sixteen years of age, clerk to an Attorney at Bristol, totally unknown to Mr. Walpole, sends him a letter, acquainting him that the writer, though bred to the law, had a taste for politer studies, particularly poetry, and wished to be drawn out of his present situation, and placed in one more at his ease, where he might pursue the studies

involved his name and character in disgrace, and which certainly deprived the world prematurely of his excellent abilities. When or how he was unfortunate enough to receive a tincture of infidelity, we are not informed. Early in the year 1769, it appears from a poem on Happiness, addressed to Mr. Catcott, that he had drank deeply of the poisoned spring: And in the conclusion of a letter to the same Gentleman, after he left Bristol, he thus expresses himself: "Heaven send you the comforts of Christianity; I request them not, for I am no Christian." Infidelity, or scepticism at least, may be termed the disease of young, lively, and half-informed minds. There is something like discovery in the rejection of truths to which they have been from infancy in trammels. A little learning, too, misleads the understanding, in an opinion of its own powers. When we have acquired the outlines of science, we are apt to suppose that every thing is within our comprehension. Much study and much information are required to discover the difficulties in which the systems of infidels are involved. There are profound, as well as popular arguments, in favour of revealed religion: but when the flippancy of Voltaire or Hume has taught young persons to suppose that they have defeated the former, their understandings seldom recover sufficient vigour to pursue the latter with the ability and perseverance of a Newton or a Bryant.

The evil effect of these principles upon the morals of youth, is often found to survive the speculative impressions which they have made on the intellect. Wretched is that person, who, in the ardour and impetuosity of youth, finds himself released from all the salutary restraints of duty and religion: wretched is he, who, deprived of all the comforting hopes of another state, is reduced to seek for happiness in the vicious gratifications of

studies more congenial to his taste and genius; but of this taste and genius he produces no other proof than transcripts of some old poems, said to have been found at Bristol, and to be *the property of another person*. These poems being exhibited by Mr. Walpole to Mr. Gray and Mr. Mason, these excellent and impartial judges agreed in opinion that they must be modern productions, disguised in antiquated phrases; and, with regard to a long list of Bristol artists, Carvers and Painters, announced also as part of this treasure, Mr. Walpole was as confident that none such ever had any existence, and therefore he could not help concluding that the whole was a fiction, contrived by some one or more literary wags, who wished to impose on his credulity, and to laugh at him if they succeeded; and that Chatterton was only the instrument employed to introduce and recommend these old writings. His youth and situation could not lead Mr. Walpole to suppose he was himself the author and contriver, more especially as he asserted them to be the property of a person at Bristol then alive. He had indeed represented himself as a lover of the muses, but had given no specimens of his *own* compositions. The kindest thing therefore Mr. Walpole could do for a young man in this situation, was, after a gentle hint of his suspicions of the authenticity of the poems, to recommend to his correspondent to pursue the line of business in which he was placed, as most likely to secure a decent maintenance for himself, and enable him to assist his mother. However disappointed Chatterton might have been at the time, and angry with Mr. Walpole for this rebuff, it should seem as if he had not harboured any long or strong resentment against that Gentleman; for in a copy of verses addressed to Miss M. R. and sent by him to the Town and Country Magazine, and printed in the Number for January 1770, is the following stanza:

"Yet when that bloom and dancing fire,
"In silver'd reverence shall expire,
"Aged, wrinkled, and defac'd,
"To keep one lover's flame alive
"Requires the genius of a *Clive*,
"With WALPOLE's mental taste (7)."

(7) See Chatterton's Miscellanies, p. 88.

It should seem also, that Chatterton had in part adopted Mr. Walpole's advice, by continuing with his master a full twelvemonth after his application to that Gentleman. Then he got dismissed from his master and went to London, in full confidence that his literary talents would find ample employment and encouragement from the London Booksellers; but being disappointed in his expectation, the fatal conclusion which has just been mentioned took place. Had this been the case immediately on his receipt of

Mr. Walpole's last letter, some shadow of foundation might have appeared for the harsh censures passed on Mr. Walpole's treatment of this ill-fated youth; though even then, no real one, all circumstances considered.

From the spirited reply of Mr. Walpole to one of these censurers, (the Editor of Chatterton's Miscellanies,) and printed in the same pamphlet as the letter to W. B. the following extract is given, as equally applicable to all objectors.

"Was it the part of a just man to couple Chatterton's first unsuccessful application with his fatal exit, and load me with both? Does your enthusiastic admiration of his abilities, or your regrets for the honour of England's poetry, warrant such a concatenation of ideas? Was poor Chatterton so modest, or so desponding, as to abandon his enterprizes on their being damped by me? Did he not continue to pursue them? Is this country so destitute of patrons of genius, or do I move in so eminent and distinguished a sphere, that a repulse from me is a dagger to talents? Did not Chatterton come to London after that miscarriage? Did he relinquish his counterfeiting propensity on its being lost on me? Was he an inoffensive ingenuous youth, smit with the love of the muses, and soaring above a sordid and servile profession, whose early blossoms being blighted by my interference, withered in mortified obscurity, and on seeing his hopes of fame blasted, sunk beneath the frowns of ignorant and insolent wealth? or did he, after launching into all the excesses you describe, and vainly hoping to gratify his ambition by adulation to, or satires on all ranks and parties of men, fall a victim to his own ungovernable spirit, and to the deplorable straits to which he had reduced himself? The interval was short, I own; but as every moment of so extraordinary a life was crowded with efforts of his enterprising genius, allow me to say with truth, that there was a large chasm between his application to me and his miserable conclusion. You know there was; and though my falling into his snare might have varied the æra of his exploits, it is more likely that that success would rather have encouraged than checked his enterprizes. When he pursued his turn for fabricating ancient writings, in spite of the mortification he received from me, it is not probable that he would have been corrected by success: such is not the nature of success, when it is the reward of artifice. I should be more justly reproachable for having contributed to cherish an impostor, than I am for having accelerated his fate. I cannot repeat the words without emotions of indignation on my own account, and of compassion on his."

O.
this

this life; who, under such delusions, acquires habits of profligacy or discontent! The progress, however, from speculative to practical irreligion, is not so rapid as is commonly supposed. The greatest advantage of a strict and orderly education is the resistance which virtuous habits, early acquired, oppose to the allurements of vice. Those who have sullied the youth of Chatterton with the imputation of extraordinary vices or irregularities, and have asserted, that "his profligacy was, at least, as conspicuous as his abilities (a)," have, I conceive, rather grounded these assertions on the apparently profane and immoral tendency of some of his productions, than on personal knowledge or a correct review of his conduct. During his residence at Bristol, we have the most respectable evidence in favour of the regularity of his conduct, namely, that of his master, Mr. Lambert. Of few young men in his situation it can be said, that during a course of nearly three years, he seldom encroached upon the strict limits which were assigned him, with respect to his hours of liberty; that his master could never accuse him of improper behaviour; and that he had the utmost reason to be satisfied he never spent his hours of leisure in any but respectable company.

(a) Preface to
Chat. Miscel.
p. 18.

Mrs. Newton, with that unaffected simplicity which so eminently characterises her letter, most powerfully controverts the obloquy which had been thrown upon her brother's memory. She says, that while he was at Mr. Lambert's, he visited his mother regularly most evenings before nine o'clock, and they were seldom two evenings together without seeing him. He was for a considerable time remarkably indifferent to females. He declared to his sister, that he had always seen the whole sex with perfect indifference, except those whom nature had rendered dear. He remarked, at the same time, the tendency of severe study to sour the temper, and indicated his inclination to form an acquaintance with a young female in the neighbourhood, apprehending that it might soften that austerity of temper which had resulted from solitary study. The juvenile Petrarch wanted a Laura, to polish his manners and exercise his fancy. He addressed a poem to Miss Rumsey; and they commenced, Mrs. Newton adds, a corresponding acquaintance. "He would also frequently," she says, "walk the College Green with the young girls that stately paraded there to shew their finery [N];" but she is persuaded that the reports which charge him with libertinism are ill-founded [O]. She could not perhaps have added a better proof of it, than his inclination to associate with modest women. The testimony of Mr. Thistlethwaite is not less explicit or less honourable to Chatterton. "The opportunities," says he, "which a long acquaintance with him afforded me, justify me in saying, that whilst he lived at Bristol, he was not the debauched character he has been represented. Temperate in his living, moderate in his pleasures, and regular in his exercises, he was undeserving of the aspersions. I admit that amongst his papers may be found many passages, not only immoral, but bordering upon a libertinism gross and unpardonable. It is not my intention to attempt a vindication of those passages, which, for the regard I bear his memory, I wish he had never written, but which I nevertheless believe to have originated rather from a warmth of imagination, aided by a vain affectation of singularity, than from any natural depravity, or from a heart vitiated by evil example [P]."

But though it may not always be the effect of infidel principles, to plunge the person who becomes unfortunately infected with them into an immediate course of flagrant and shameless depravity, they seldom fail to unhinge the mind, and render it the sport of some passion, unfriendly to our happiness and prosperity. One of their first effects in Chatterton was to render the idea of suicide familiar, and to dispose him to think lightly of the most

[N] *To shew their finery.* In a letter from London to his sister, he particularizes ten Bristol females of his acquaintance, and adds, "I promised to write to some hundreds, I believe: but what with writing for publications, and going to places of public diversion, which is as absolutely necessary to me as my food, I find but little time to write to you."

[O] *Which charge him with libertinism are ill-founded.* I cannot help remarking a pleasant mistake of the Dean of Exeter. The orthography of Mrs. N. in the letter printed in *Love and Madness*, is not the most correct. Her words are, "I really believe he was no debauchee (though some have reported it); the dear unhappy boy had faults enough, I saw with concern; he was proud and exceedingly imperious, but that of *venality* he could not be justly accused with." It is easy to see that Mrs. N. by *venality* means libertinism; but the Dean taking the word in the usual sense, makes use of it to disprove, what is seldom suspected of a Poet, and least of all of Chatterton, that he was avaricious (8).

(8) Mrs. Newton's letter.

[P] *Or from a heart vitiated by evil example.* Whether the following passage from Chatterton's *Kew Gardens* (a poem not published in any of the collections of his works) be received as a confirma-

tion of his friend's testimony in his favour, or the contrary, it is, however, worth preserving. An officious friend is introduced accosting him in the following lines:

"Is there a street within this spacious place,
"That boasts the happiness of one fair face,
"Whose conversation does not turn on you?
"Blaming your wild amours, and morals too.
"Oaths, sacred and tremendous oaths you swear,
"Oaths which might shock a L——'s soul to hear;
"Whilst the too tender and believing maid,
"Remember pretty——is betray'd.
"Then your religion!—oh, beware! beware!
"Although a Deist is no monster here,
"Think not the merit of a jingling song
"Can countenance the author's acting wrong.
"Reform your manners, and with solemn air,
"Hear Catcott bray, and Robins squeak in prayer.
"Damn'd narrow notions, notions which disgrace
"The boasted freedom of the human race;
"Bristol may keep her prudent maxims still,
"I scorn her prudence, and I ever will.
"Since all my vices magnified are here,
"She cannot paint me worse than I appear.
"When raving in the lunacy of ink,
"I catch the pen, and publish what I think (9)." O.

(9) Milles's
Rowley, p. 461.
sacred

sacred deposit with which man is entrusted by his Creator. It has been supposed that his violent death in London, was the sudden or almost instant effect of extreme poverty and disappointment. It appears, however, that long before he left Bristol, he had repeatedly intimated to the servants of Mr. Lambert, his intention of putting an end to his existence. Mr. Lambert's mother was particularly terrified; but she was unable to persuade her son of the reality of his threats, till he found by accident upon his desk a paper, entitled, the "Last Will and Testament of Thomas Chatterton (b)," in which he seriously indicated his design of committing suicide on the following day, namely, Easter Sunday, April 15th, 1770. The paper was probably rather the result of temporary uneasiness [2], than of that fixed aversion to his situation which he constantly manifested. But with principles and passions such as Chatterton displayed, Mr. Lambert considered it as no longer prudent, after so decisive a proof, to continue him in the house: he accordingly dismissed him immediately from his service, in which he had continued two years, nine months, and thirteen days.

(b) See the Will in the Appendix to Chatterton's Misc.

(c) Mrs. Newton's Letter.

(d) Milles's Rowley, p. 460.

If there was any sincerity in the intentions of committing suicide, which he expressed in the paper above alluded to, he was diverted from it for the present by the golden prospects with which he flattered himself from a new plan of life, on which he entered with his usual enthusiasm. A few months before he left Bristol, he had written letters to several Booksellers in London (c), "who," Mr. Thistlethwaite says, "finding him of advantage to them in their publications, were by no means sparing of their praises and compliments; adding the most liberal promises of assistance and employment, should he choose to make London the place of his residence (d)." To the interrogatories of this Gentleman concerning the plan of life which he intended to pursue on his arrival at London, his answer was remarkable, and corresponds with what has been just related. "My first attempt," said he, "shall be in the literary way: The promises I have received are sufficient to dispel doubt; but should I, contrary to my expectation, find myself deceived, I will in that case turn Methodist preacher. Credulity is as potent a deity as ever, and a new sect may easily be devised. But if that too should fail me, my last and final resource is a pistol."

Before he quitted Bristol, he had entered deeply into politics, and had embraced what was termed the patriotic party. In March 1770, he wrote a satirical poem, called "Kew Gardens," consisting of above thirteen hundred lines. This he transmitted, in different packets, to Mr. George William Edmunds, No. 73, Shoe-lane, Printer of a patriotic newspaper. At the bottom of the first packet, which contained about three hundred lines, written in Chatterton's own hand, is this postscript. "Mr. Edmunds will send the author, Thomas Chatterton, twenty of the Journals, in which the above poem (which I shall continue) shall appear, by the machine, if he thinks proper to put it in: the money shall be paid to his orders." The poem is a satire on the Princess Dowager of Wales, Lord Bute, and their Friends in London and Bristol; but particularly on those in Bristol, who had distinguished themselves in favour of the Ministry. His signature on this occasion was DECIMUS; but whether the poem was ever printed or not, I have not been able to ascertain. I have been also informed of another political satire of near six hundred lines, the manuscript of which, in Chatterton's hand writing, is in the possession of a friend of Mr. Catcott. It is called "The Whore of Babylon." The satire of this poem is also directed against the Ministry; and, like the former, it includes several of the Bristol people, not excepting Mr. George Catcott, and his brother the Clergyman. But his party efforts were not confined altogether to poetry: he wrote an invective in prose against Bishop Newton, also signed Decimus, which, I believe, appeared in some of the periodical publications of the times. The manuscript of this letter is in Mr. Catcott's possession; but the style appears much inferior to that of his prose publications posterior to his arrival in London. To write well in prose is perhaps more the effect of art, of study, and of habit, than of natural genius. The rules of metrical composition are fewer, more simple, and require a less constant exercise of the judgment. In the infancy of societies, as well as of individuals, therefore, the art of poetry is antecedent to those of rhetoric and criticism, and arrives at perfection long before the language of prose attains that degree of strength, conciseness, and harmony, which is requisite to satisfy a delicate ear. Chatterton wrote also an indecent satirical poem, called "The Exhibition," occasioned by the improper behaviour of a person in Bristol. The satire of this poem is chiefly local, and the characters of most of the Surgeons in Bristol are delineated in it. Some descriptive passages in this poem have great merit. Thus, speaking of a favourite organist, probably Mr. Allen, he says:

"He keeps the passions with the sound in play,
"And the soul trembles with the trembling key (e)."

(e) Love and Madness, p. 674

There are a number of other unpublished works of his dispersed in the hands of different persons. The activity of his mind is indeed almost unparalleled. But our surprise

[2] The paper was probably rather the result of temporary uneasiness. I have been informed from good authority, that it was occasioned by the refusal of a

Gentleman, whom he had occasionally complimented in his poems, to accommodate him with a supply of money.

(f) See the third letter of Chatterton, published in Love and Madness, p. 198.

(g) From the information of Mr. Seward.

must decrease, when we consider that he slept but little; and that his whole attention was directed to literary pursuits; for he declares himself so ignorant of his profession, that he was unable to draw out a clearance from his apprenticeship, which Mr. Lambert demanded (f). He was also unfettered by the study of the dead languages, which usually absorb much of the time and attention of young persons; and though they may be useful to the attainment of correctness, perhaps they do not much contribute to fluency in writing. Mr. Catcott declared, that when he first knew Chatterton, he was ignorant even of

Grammar (g).

There are three great æras in the life of Chatterton; his admission into Colston's School, his being put apprentice to Mr. Lambert, and his expedition to London. In the latter end of April, 1770, he bade his native city (from which he had never previously been absent farther than he could walk in half a Sunday) a *final adieu* (b). In a letter to his mother, dated April 26th, he describes in a lively style the little adventures of his journey, and his reception from his patrons, the booksellers and printers with whom he had corresponded. These were Mr. Edmunds, whom I lately had occasion to mention as a noted patriotic printer at that period; Mr. Fell, publisher of the Freeholder's Magazine; Mr. Hamilton, proprietor of the Town and Country; and Mr. Doddsley, of Pall-Mall. From all of them he professes to have received great encouragement, adding, that all approved of his design, and that he should probably be soon settled. In the same letter, he desires his mother to call upon Mr. Lambert. "Shew him this," says he, with uncommon dignity and spirit, "or tell him, if I deserve a recommendation, he would oblige me to give me one—if I do not, it would be beneath him to take notice of me (i)."

(b) Love and Madness, p. 194.

(i) Love and Madness, p. 192.

His first habitation after his arrival in London was at Mr. Walmsley's, a plaisterer in Shoreditch, to whom he was introduced by a relation of his, a Mrs. Ballance, who resided in the same house. Of his first establishment his report is favourable. "I am settled," says he, in a letter to his mother, dated May 6th, "and in such a settlement as I could desire. I get four guineas a month by one magazine; shall engage to write a history of England, and other pieces, which will more than double that sum. Occasional essays for the daily papers would more than support me. What a glorious prospect (k)!" In consequence of his engagements with the different magazines, we find him, about the same time, soliciting communications from his poetical and literary friends at Bristol, and desiring them to read the Freeholder's Magazine. In a letter dated the 14th of the same month, he writes in the same high flow of spirits. He speaks of the great encouragement which genius meets with in London; adding, with exultation, "If Rowley had been a Londoner instead of a Bristowyan, I might have lived by copying his works (l)." He exhorts his sister to "improve in copying music, drawing, and every thing which requires genius;" observing, that although, "in Bristol's mercantile style, those things may be useless, if not a detriment to her; *here* they are profitable (m)." His engagements at that period indeed appear to have been numerous; for besides his employment in the magazines, he speaks of a connection which he had formed with a Doctor in Music, to write songs for Ranelagh, Vauxhall, &c. and in a letter of the 30th to his sister, he mentions another with a Scottish Bookseller, to compile a voluminous History of London, to appear in numbers, for which he was to have his board at the Bookseller's house, and a handsome premium [R].

(k) Ibid. 197.

(l) Yet it does not appear that any of Rowley's pieces were exhibited after C. left Bristol. O.
(m) Love and Madness, p. 201.

Party writing, however, seems to have been one of his favourite employments. It was agreeable to the satirical turn of his disposition, and it gratified his vanity, by the prospect of elevating him into immediate notice. When his relation, Mrs. Ballance, recommended it to him to endeavour to get into some office, he stormed like a madman, and alarmed the good old Lady in no inconsiderable degree, by telling her, "he hoped, with the blessing of God, very soon to be sent prisoner to the Tower, which would make his fortune." In his second letter to his mother from London, he says, "Mr. Wilkes knew me by my writings, since I first corresponded with the Booksellers here. I shall visit him next week, and by his interest will insure Mrs. Ballance the Trinity House. He affirmed that what Mr. Fell had of mine could not be the writings of a youth, and expressed a desire to know the author. By means of another Bookseller, I shall be introduced to Townshend and Sawbridge. I am quite familiar at the Chapter Coffee-house, and know all the geniusses there. A character is now unnecessary; an author carries his character in his pen (n)." He informs his sister that, if money flowed as fast upon him as honours, he would give her a portion of five thousand pounds. This extraordinary elevation of spirits arose from an introduction to the celebrated patriotic Lord Mayor, W. Beckford. Chatterton had, it seems, addressed an essay to him, which was so well received, that it encouraged him to wait upon his Lordship, in order to obtain his approbation to address a second letter to him, on the subject of the city remonstrance, and its reception. "His Lordship (adds he)

(n) Ibid. p. 194.

[R] And a handsome premium.] The Editor of Chatterton's Miscellanies confounds this with Northook's History of London: but that Gentleman, in a letter printed in the St. James's Chronicle, denies

having ever had the least knowledge of C. Indeed the scheme above alluded to appears not to have been proceeded in (10).

(10) Love and Madness, p. 202.

received me as politely as a citizen could, and warmly invited me to call on him again. The rest is a secret." His inclination doubtless led him to espouse the party of opposition; but he complains, that "no money is to be got on that side the question; interest is on the other side. But he is a poor author who cannot write on both sides. I believe I may be introduced (and if I am not, I'll introduce myself) to a ruling power in the Court party (o)." When Beckford died, he is said to have been almost frantic (p), and to have (p) *Ibid.* p. 214. exclaimed, that he was ruined. The elegy, however, in which he has celebrated him (q), (q) *Chat. Miscel.* p. 76. contains more of frigid praise, than of ardent feeling; nor is there in it a single line which appears to flow from the heart. Indeed, that he was serious in his intention of writing on both sides, is evident from a list of pieces written by Chatterton, but never published, which Mr. Walpole has preserved. No. V. of these pieces is a letter to Lord North, dated May 26th, 1770, signed *Moderator*, and beginning, "My Lord, It gives me a painful pleasure, &c." It contains, as Mr. Walpole informs us, an encomium on Administration for rejecting the City Remonstrance. On the other hand, No. VI. is a letter to the Lord Mayor, Beckford, (probably that which he desired his permission to address to him). It is also dated May 26, signed *Probus*, and contains a virulent invective against Government for rejecting the Remonstrance, beginning, "When the endeavours of a spirited people to free themselves from insupportable slavery, &c." On the back of this essay, which is directed to Mr. Cary, a particular friend of Chatterton in Bristol, is this indorsement: "Accepted by Bingley—set for, and thrown out of the North Briton, 21st June, on account of the Lord Mayor's death.

Lost by his death on this Essay,	-	£. 1 11 6
Gained in Elegies,	-	£. 2 2 0
—— in Essays,	-	3 3 0
		5 5 0
Am glad he is dead by	-	£. 3 13 6 (r)"

(r) Two letters printed at Strawberry-hill.

"Essays," again says he to his sister, "on the patriotic side, fetch no more than what the copy is sold for. As the patriots themselves are searching for a place, they have no gratuities to spare. On the other hand, unpopular essays will not even be accepted, and you must pay to have them printed; but then you seldom lose by it. Courtiers are so sensible of their deficiency in merit, that they generally reward all who know how to daub them with an appearance of it (s)." Either Chatterton, on this occasion, spoke from hear-say, or there is reason to believe that the ministerial arrangements are greatly altered in this respect, and that most of the late administrations have found a more effectual, if a more expensive support, from a venal majority in the House, than from a venal phalanx of mendicant authors in the daily papers.

On this sandy foundation of party writing Chatterton erected a visionary fabric of future greatness; and, in the waking dreams of a poetical imagination, he was already a man of considerable public importance. It was a common assertion with him, "that he would settle the nation before he had done (t)." In a letter to his sister of the 20th July, he tells her, "My company is courted every where; and, could I humble myself to go into a comptroller, could have had twenty places before now; but I must be among the great; state matters suit me better than commercial (u)." In a former letter he intimates, that he "might have had a recommendation to Sir George Colebrooke, an East-India Director, as qualified for an office no ways despicable, but," he adds, "I shall not take a step to the sea, whilst I can continue on land (w)." His taste for dissipation seems to have kept pace with the increase of his vanity (x). To frequent places of public amusement, he accounts as necessary to him as food. "I employ my money," says he, "now in fitting myself fashionably, and getting into good company: this last article always brings me in interest (y)." (s) *Love and Madness*, p. 204. (t) *Ibid.* p. 214. (u) *Ibid.* p. 210. (w) *Ibid.* p. 203. (x) *Ibid.* p. 200. (y) *Love and Madness*, p. 202.

While engaged in the examination of these curious letters, it is impossible not to be attracted by a remarkable passage. Chatterton informs his mother in the letter of May 14th, A Gentleman, who knows me at the Chapter, as an author, would have introduced me as a companion to the young Duke of Northumberland, in his intended general tour; but, alas! I speak no tongue but my own (z)." It is not very credible, that any of the constant frequenters of the Chapter Coffee-house should be possessed of influence sufficient to recommend a person to the Duke of Northumberland, to so important an office as that of the care of his son; much less credible is it, that such a person would recommend a young literary adventurer, whose character was only known by an accidental meeting at a coffee-house; and least credible of all is it, that such a person was likely to be accepted on so slender a ground of recommendation. It is no unfrequent sport with little minds to play with the sanguine tempers and expectations of young and unexperienced minds. Poor Chatterton had tolerable experience of these prodigal promisers, from the patriotic Beckford to his pretended patron at the Chapter Coffee-house.

The

The splendid visions of promotion and consequence however soon vanished, and our adventurer found no patrons but the booksellers; and even here he seems not to have escaped the poignant sting of disappointment. Soon after his arrival in London, he writes to his mother, "The poverty of authors is a common observation, but not always a true one. No author can be poor who understands the arts of booksellers: without this necessary knowledge the greatest genius may starve, and with it the greatest dunce may live in splendour. This knowledge I have pretty well dipped into (a)." This knowledge, however, instead of conducting to opulence and independence, proved a delusive guide; and though he boasts of having pieces in the month of June 1770 in the Gospel Magazine, the Town and Country, the Court and City, the London, the Political Register, &c. and that almost the whole Town and Country for the following month was his (b), yet it appears, so scanty is the remuneration for those periodical labours, that even these uncommon exertions of industry and genius were insufficient to ward off the approach of poverty; and he seems to have sunk almost at once from the highest elevation of hope and illusion, to the depths of despair. Early in July he removed his lodgings from Shoreditch to Mrs. Angel's, a Sack-maker, in Brook-street, Holborn. Mr. Walmesley's family affirmed that he assigned no reason for quitting their house. The author of *Love and Madness* attributes the change to the necessity he was under, from the nature of his employments, of frequenting public places (c). Is it not probable that he might remove, lest his friends in Shoreditch, who had heard his frequent boasts, and observed his dream of greatness, should be the spectators of his approaching indigence? Pride was the ruling passion of Chatterton, and a too acute sense of shame is ever found to accompany literary pride. But however he might be desirous of preserving appearances to the world, he was sufficiently lowered in his own expectations; and great indeed must have been his humiliation, when we find his towering ambition reduced to the miserable hope of securing the very ineligible appointment of a surgeon's mate to Africa. To his friend Mr. Barrett he applied, in his distress, for a recommendation to this unpromising station. Even in this dreary prospect he was not, however, without the consolations of his muse. His fancy delighted itself with the expectation of contemplating the wonders of a country, where "Nature flourishes in her most perfect vigour; where the purple aloe, and the scarlet jessamine, diffuse their rich perfumes; where the reeking tygers bask in the sedges, or wanton with their shadows in the stream (d)."

(a) *Love and Madness*, p. 195.(b) *Ibid.* p. 210.(c) *Love and Madness*, p. 189.(d) See the *African Eclogue*, *Chat. Misc.* p. 56-61.
(e) *Chat. Misc.* p. 85.

His resolution was announced in a poem to Miss Bush (e), in the style of Cowley, that is, with too much affectation of wit for real feeling. Probably, indeed, when he composed the *African Eclogues*, which was just before, he might not be without a distant contemplation of a similar design; and perhaps we are to attribute a part of the exulting expressions, which occur in the letters to his mother and sister, to the kind and laudable intention of making them happy with respect to his prospects in life; since we find him, almost at the very crisis of his distress, sending a number of little unnecessary presents to them and his grandmother [S], while perhaps he was himself almost in want of the necessaries of life.

On the score of incapacity probably, Mr. Barrett refused him the necessary recommendation, and his last hope was blasted [T]. Of Mrs. Angel, with whom he last resided, no enquiries have afforded any satisfactory intelligence; but there can be little doubt that his death was preceded by extreme indigence. Mr. Cross, an Apothecary in Brook-street, informed Mr. Warton, that while Chatterton lived in the neighbourhood, he frequently called at the shop, and was repeatedly pressed by Mr. Cross to dine or sup with him in vain. One evening, however, human frailty so far prevailed over his dignity, as to tempt him to partake of the regale of a barrel of oysters, when he was observed to eat most voraciously (f). Mrs. Wolfe, a Barber's wife, within a few doors of the house where Mrs. Angel lived, has also afforded ample testimony, both to his poverty and his pride. She says, "that Mrs. Angel told her, after his death, that on the 24th of August, as she knew he had not eaten any thing for two or three days, she begged he would take some dinner with her; but he was offended at her expressions, which seemed to hint he was in want, and assured her he was not hungry (g)." In these desperate circumstances, his mind reverted to what (we learn from Mr. Thistlethwaite, and other quarters) he had accustomed himself to regard as a last resource.—"Over his death, for the sake of the

(g) *Love and Madness*, p. 219.(f) Warton's *Inquiry*, p. 107.

(11) His prospects were then of the most flattering kind. See his last letter to his sister.

[S] *Sending a number of little unnecessary presents to them and his grandmother.* They seem to have been trifling presents, and those not sent when he was in want (11). As soon as he felt himself in that state he presently dispatched himself; that is, six weeks after he had sent these presents.

There has been too much flourishing about these presents and affection to his relations. When a man suffers from pain of body or mind, and is tempted in consequence thereof to commit suicide, the strongest motives to restrain him are the prospect and fear of

punishment in the next world, and a love of, and regard to, his family, relations, and friends in this. The former C. seems to have entirely discarded. O.

[T] *And his last hope was blasted.* This circumstance reflects no disgrace, but rather honour upon Mr. B. as he could not possibly foresee the melancholy consequence, and he could not in conscience be the instrument of committing the lives of a considerable number of persons to one totally inadequate to the charge.

world,"

world," says the author of *Love and Madness*, "I would willingly draw a veil. But this must not be. They who are in a condition to patronise merit, and they who feel a consciousness of merit which is not patronised, may form their own resolutions from the catastrophe of his tale;—those, to lose no opportunity of befriending genius; these, to seize every opportunity of befriending themselves, and, upon no account, to harbour the most distant idea of quitting the world, however it may be unworthy of them, lest despondency should at last deceive them into so unpardonable a step. Chatterton, as appears by the Coroner's Inquest, swallowed arsenick in water, on the 24th of August, 1770, and died in consequence thereof the next day. He was buried in a shell, in the burying-ground of Shoe-lane work-house (b)." Whatever unfinished pieces he might have, he cautiously destroyed them before his death; and his room, when broken open, was found covered with little scraps of paper (i). What must increase our regret for this hasty and unhappy step, is the information that the late Dr. Fry, Head of St. John's College in Oxford, went to Bristol in the latter end of August 1770, in order to search into the history of Rowley and Chatterton, and to patronise the latter, if he appeared to deserve assistance—when, alas! all the intelligence he could procure was, that Chatterton had, within a few days, destroyed himself (k).

(b) *Ibid.* p. 221.(i) *Ibid.* p. 222.(k) *Ibid.* p. 226.

I have been induced, from the circumstances of the narrative, repeatedly to consider the character of Chatterton in the different stages of life in which I had occasion to contemplate him. Indeed, the character of any man is better understood from a fair and accurate statement of his life and conduct, than from the comments of any critic or biographer whatever. A few general observations, which could not with so much propriety be introduced into the body of the narrative, I shall, however, venture to subjoin; though I flatter myself the reader is not at this time unacquainted with the outline of his moral portrait.

The person of Chatterton, like his genius, was premature. He had a manliness and dignity beyond his years, and there was a something about him uncommonly prepossessing. His most remarkable feature was his eyes, which, though gray, were uncommonly piercing: when he was warmed in argument, or otherwise, they sparked with fire, and one eye, it is said, was still more remarkable than the other (l). His genius will be most completely estimated from his writings. He had an uncommon ardour in the pursuit of knowledge, and uncommon facility in the attainment of it. It was a favourite maxim with him, that "man is equal to any thing, and that every thing might be achieved by diligence and abstinence [T]." His imagination, like Dryden's, was more fertile than correct; and he seems to have erred rather through haste and negligence, than through any deficiency of taste. He was above that puerile affectation which pretends to borrow nothing. He knew that original genius consists in forming new and happy combinations, rather than in searching after thoughts and ideas which never had occurred before; and that the man who never imitated, has seldom acquired a habit of good writing. If those poems, which pass under the name of Rowley, be really the productions of Chatterton, he possessed the strongest marks of a vigorous imagination and a sound judgment, in forming great, consistent, and ingenious plots, and making choice of the most interesting subjects. If Rowley and Chatterton be the same, it will be difficult to say whether he excelled most in the sublime or the satirical; and as an universal genius, he must rank above Dryden, and perhaps only stand second to Shakespeare. If, on the other hand, we are to judge altogether from those pieces which are confessedly his own, we must undoubtedly assign the preference to those of the satirical class. In most of his serious writings, there is little that indicates their being composed with a full relish: when he is satirical, his soul glows in his composition.

(l) *Ibid.* p. 271.(m) *Love and Madness*, p. 198.

(n) Chatterton's Will, in App. to Misc.

Mr. Catcott affirms that Chatterton understood no language but his mother tongue. The same fact seems to be implied in his own confession, "that he spoke no tongue but his own (m); and it receives decisive confirmation from the testimony of Mr. Smith, in his conversation with Dr. Glynn: yet we find him, even so early as the year 1768, annexing a Latin signature to the "Accounte of the Fryers passing the old Bridge;" and there are some attempts at inscriptions in old French, in the design which he planned for his own tomb-stone (n). He, probably, might have acquired some little knowledge of both these languages; but even if this were the case, there can be no doubt that it was very superficial. When we consider the variety of his engagements while at Bristol, his extensive reading, and the great knowledge he had acquired of the ancient language of his native country, we cannot wonder that he had not time to occupy himself in the study of other languages; and after his arrival in London, he had a new and necessary science to learn, the world: and that he made the most advantageous use of his time is evident from the extensive knowledge of mankind displayed in the different essays, which he produced

[T] *And that every thing might be achieved by diligence and abstinence.* If any uncommon character was mentioned in his hearing, "All boy as he was, he would only observe, that the person in question

merited praise; but that God had sent his creatures into the world with arms long enough to reach any thing, if they would be at the trouble of extending them (11)."

(11) *Love and Madness*, p. 183.

occasionally for periodical publications. The lively and vigorous imagination of Chatterton contributed, doubtless, to animate him with that spirit of enterprise, which led him to form so many impracticable and visionary schemes, for the acquisition of fame and fortune. His ambition was evident from his earliest youth; and perhaps the inequality of his spirits might, in a great measure, depend upon the fairness of his views, or the dissipation of his projects. His melancholy was extreme on some occasions; and, at those times, he constantly argued in favour of suicide. Mr. Catcott left him one evening totally depressed; but he returned the next morning with unusual spirits. He said, "he had sprung a mine," and produced a parchment, containing the *Sprytes*, a poem, now in the possession of Mr. Barrett (o).

(o) From the information of Mr. Seward.

His natural melancholy was not corrected by the irreligious principles which he had so unfortunately imbibed. To these we are certainly to attribute his premature death; and, if he can be proved guilty of the licentiousness which is by some laid to his charge, it is reasonable to believe that a system, which exonerates the mind from the apprehension of future punishment, would not contribute much to restrain the criminal excesses of the passions. Had Chatterton lived, and been fortunate enough to fall into settled and sober habits of life, his excellent understanding would, in all probability, have led him to see the fallacy of those principles, which he had hastily embraced: as it was, the only preservatives of which he was possessed against the contagion of vice, were the enthusiasm of literature, and that delicacy of sentiment which taste and reading inspire. But though these auxiliaries are not wholly to be despised, we have too many instances of their inefficacy in supporting the cause of virtue, to place any confident reliance on them.

Under such circumstances there is little cause for surprize, if the passions of Chatterton should frequently have trespassed the boundaries of reason and moral duty. That he had strong resentments is evident from his great disposition to satire, and particularly from the letter which has been mentioned as written by him to his school-master, soon after the commencement of his apprenticeship. That he was "proud and imperious," is allowed by his sister, and the generality of his acquaintance. He stands charged with a profligate attachment to women: the accusation, however, is stated in a vague and desultory manner, as if from common report, without any direct or decided evidence in support of the opinion. To the regularity of his conduct during his residence in Bristol, some respectable testimonies have been already exhibited. It is, indeed, by no means improbable, that a young man of strong passions, and unprotected by religious principles, might frequently be unprepared to resist the temptations of a licentious metropolis: yet, even after his arrival in London, there are some proofs in his favour, which ought not to be disregarded. During a residence of nine weeks at Mr. Walmfley's, he never staid out beyond the family hours, except one night, when Mrs. Ballance knew that he lodged at the house of a relation (p).

(p) Love and Madness, p. 261.

Whatever may be the truth of these reports, the list of his virtues still appears to exceed the catalogue of his faults. His temperance was in some respects exemplary. He seldom eat animal food, and never tasted any strong or spirituous liquors: he lived chiefly on a morsel of bread or a tart, with a draught of water. His sister affirms, that he was a lover of truth from the earliest dawn of reason; and that his school-master depended on his veracity on all occasions (q): the pride of genius will seldom descend to the most contemptible of vices, falsehood. His high sense of dignity has been already noticed in two most striking instances; but the most amiable feature in his character, was his generosity and attachment to his mother and relations. Every favourite project for his advancement in life was accompanied with promises and encouragement to them. While in London, he continued to send them presents, at a time when he was known himself to be in want: and indeed, the unremitting attention, kindness and respect, which appear in the whole of his conduct towards them, are deserving the imitation of those in more fortunate circumstances, and under the influence of better principles of faith than Chatterton possessed [U].

(q) Mrs. N.'s letter, *ibid.*

He had a number of friends, and notwithstanding his disposition to satire, he is scarcely known to have had any enemies. By the accounts of all who were acquainted with him, there was something uncommonly insinuating in his manner and conversation. Mr. Cross informed Mr. Warton, that in Chatterton's frequent visits while he resided at Brook-street, he found his conversation, a little infidelity excepted, most captivating (r). His extensive, though in many instances, superficial knowledge, united with his genius, wit and fluency, must have admirably accomplished him for the pleasures of society. His pride, which perhaps should rather be termed the strong consciousness of intellectual excellence, did not destroy his affability. He was always accessible, and rather forward to make acquaintance, than apt to decline the advances of others [X]. There is reason however to believe,

(r) Warton's Inquiry, p. 107.

[U] *Of better principles of faith than Chatterton possessed.* It can never be sufficiently lamented, that this amiable propensity was not more uniform in Chatterton. A real love for his relations ought to have arrested the hand of suicide; but when religion is lost, all uniformity of principle is lost. O.

[X] *Than apt to decline the advances of others.* "Last week being in the pit of Drury-Lane Theatre, I contracted an immediate acquaintance (which you know is no hard task to me) with a young Gentleman, &c. (12)." (12) Letter to his mother, Love and Madness, p. 197.

that

that the inequality of his spirits, affected greatly his behaviour in company. His fits of absence were frequent and long. "He would often look stedfastly in a person's face without speaking, or seeming to see the person, for a quarter of an hour or more (s)."

(s) Love and Madnefs, p. 214.

Chatterton had one ruling passion which governed his whole conduct, and that was the desire of literary fame. This passion intruded itself on every occasion, and absorbed his whole attention. Whether he would have continued to improve, or the contrary, must have depended in some measure on the circumstances of his future life. Had he fallen into profligate habits and connections, he would probably have lost a great part of his ardour for the cultivation of his mind; and his maturer age would only have diminished the admiration which the efforts of his childhood have so justly excited.

At the shrine of Chatterton, some grateful incense has been offered. Mr. Warton speaks of him as "a prodigy of genius," as "a singular instance of a prematurity of abilities." He adds, that "he possessed a comprehension of mind, and an activity of understanding, which predominated over his situation in life, and his opportunities of instruction (t)."

And Mr. Malone "believes him to have been the greatest genius that England has produced since the days of Shakespeare (u)." Mr. Croft (w), the ingenious author of *Love and Madnefs*, to whom in the course of this work I have had many obligations, is still more unqualified in his praises. He asserts, that "no such human being, at any period of life, has ever been known, or possibly ever will be known." He adds, in another place, "an army of Macedonian and Swedish mad butchers, indeed, fly before him; nor does my memory supply me with any human being, who, at such an age, with such disadvantages, has produced such compositions [Y]. Under the Heathen mythology, superstition and admiration would have explained all by bringing Apollo upon earth: nor would the god ever have descended with more credit to himself."

(t) History of English Poetry.

(u) Curfory Observations on the Poems attributed to Rowley, p. 41.
(w) Editor of an intended new English Dict.

The following parallel also by the same ingenious critic, does equal credit to the ingenuity of its author, and the reputation of Chatterton.

"Milton enjoyed every advantage not only of private, but of public, not only of domestic, but of foreign education.

"Milton in his youth received such instructions from Teachers and Schoolmasters, that, in his age, he was able to become a Schoolmaster, and a Teacher to others.

"Milton's juvenile writings would not have justified a prophecy of *Paradise Lost*: but the author of them flatters himself, by dating his life fifteen till he had turned sixteen.

"Milton did not produce *Comus* much earlier than in his 26th year; since it was first presented at Ludlow in 1634, and he was born in 1608. In 1645, when he was thirty-seven, *Allegro and Penferoso*, first appeared. In 1655, when he was forty-seven, after *long choosing, and beginning late*, he set himself to turn a strange thing, called a *Mystery*, into an epic poem; which was not completed in less than Chatterton's whole active existence, since the copy was not sold till April, 1667, and then consisted only of ten books. With all its glorious perfections, *Paradise Lost* contains puerilities, to which Chatterton was a stranger. In three years more, when he was sixty-two, appeared Milton's *History of England*. *Paradise Regained*, and *Sampson*, were published in

"Chatterton wanted every advantage of every possible education.

"Chatterton became his own Teacher and his own Schoolmaster before other children are subjects for instruction; and never knew any other.

"Few, if any, of Milton's juvenile writings would have been owned by Chatterton, at least by Rowley, could he have past for the author of them.

"Chatterton, not suffered to be *long choosing*, or to *begin late*, in seventeen years and nine months, reckoning from his cradle to his grave, produced the volume of Rowley's poems, his volume of *Miscellanies*, and many things which are not printed, beside what his indignation tore in pieces the day he spurned at the world, and threw himself on the anger of his Creator.

[Y] *Has produced such compositions.* "Mohammed, it is true, says Mr. Croft, with hardly the usual education of his illiterate tribe, unable (as was imagined, and he pretended) even to read or write, forged the *KORAN*; which is to this day the most elegant composition in the Arabic language, and its standard of excellence. Upon the argument of improbability, that a man so illiterate should compose a book so admired, *Mohammed* artfully rested the principal evidence of his *Koran's* divinity (13). He, who, merely from improbability, denies Chatterton to be the author of Rowley's Poems, must go near to admit God to be the author of the *Koran*. But, before we compare together Chatterton and Mo-

ammed, it should be remembered that Mohammed was *forty* when he commenced prophet. Perhaps the most extraordinary circumstance about Mohammed is, that even familiarity could not sink him into contempt; that he contrived to be a hero and a prophet, even to his wives and his *valets de chambre*. Even his fits of the epilepsy he converted into proofs of his divine mission. It is probable, that, if *Mohammed* had been less salacious, and not subject to the falling sickness, out of thirty equal divisions of the known world, whereof Christianity claims five, and Paganism nineteen, the inhabitants of six would not now believe in the *Koran*."

(13) Sale's *Koran*, p. Discourse, p. 42, 60.

What

the same year. Lycidas I had forgotten. It was written in his 29th year. That propriety of character and situation, which Chatterton can seldom have violated, or he would not to this moment deceive such and so many men, Milton seldom preserves in Lycidas. If, in the course of an existence almost four times longer than Chatterton's, this man (*fallen on evil days and evil tongues*, with less truth than Chatterton), who bore no fruit worth gathering till after the age at which Chatterton was withered by the hand of Death—if, I say, this great man produced other writings, he will not quarrel that posterity has forgotten them: if he should, posterity will still perhaps forget them.

"Milton's manuscripts, preserved at Cambridge, bear testimony to his frequent and commendable correction.

"Milton, as Ellwood relates, could never bear to hear *Paradise Lost* preferred before *Paradise Regained*. He is known to have pronounced Dryden to be no Poet.

"Milton, more from inclination than want of bread, it seems, entered into party disputes, whether a king might be lawfully beheaded, &c. with a fervility and a virulence, and let out his praise to hire, perhaps, with a meanness, at all periods of his life, which the worst enemies of Chatterton cannot prove him to have equalled.

"Milton, in affluence (if compared with others beside Chatterton) felt on his brows those laurels which others could not see; and was persuaded that, "by labour and intense study, his portion in this life, he might leave something so written to after-times, as they should not willingly let it die."

"*Paradise Lost* produced the author and the widow only twenty-eight pounds. The meaner, more servile, and more versatile abilities of the author produced him indeed enough to be deprived of four thousand pounds by ill-fortune, and to leave fifteen hundred pounds to his family.

"Phillips relates of Milton, from his own mouth, that "his vein never happily flowed but from the autumnal equinox to the vernal." Richardson writes, that "his poetical faculty would on a sudden rush upon him with an impetus or æstrum."

"Milton, when a man, seldom drank any thing strong: he ate with delicacy and temperance.

"Milton's historians and grand-daughter admit his moroseness to his children, and that he would not let them learn to write."

"What time could Chatterton have found for alteration or correction, when I maintain that any boy who should only have fairly *transcribed*, before his eighteenth year, all that Chatterton, before his eighteenth year, invented and composed, would be thought to deserve the reputation of diligence, and the praise of application?

"If Chatterton, much earlier in life than Milton was calculated either to be an author or a critick, had not possessed a chaster judgment, he would not still impose on so many criticks and authors.

"Chatterton, in order to procure bread for himself, a grandmother, mother and sister, was ready to prove the patriotism of Bute, or of Beckford, in writings, which older men need not blush to own, and in an age when older men did not blush at such a *profession*.

"Chatterton, steeped to the lips in poverty, entertained, long before he had lived eighteen years, ideas, hopes, persuasions, (*by labour and intense study*, more truly *his portion in this life* than Milton's) of living to all eternity in the memory of Fame.

"Mr. Catcott and Mr. Barrett must inform the world whether Rowley's poems and his own together produced Chatterton twenty-eight shillings.

"What is said of Chatterton, and of the moon's effect upon him, you have read.

"Chatterton, when a boy, hardly ever touched meat, and drank only water: when a child, he would often refuse to take any thing but bread and water, even if it did happen that his mother had a hot meal, "because he had a work in hand, and he must not make himself more stupid than God had made him."

"Chatterton's mother, his sister and his letters, can speak best of his heart, and of his wishes that his sister might learn every thing."

To

To these I shall add the testimony of Mr. Knox:

“ Unfortunate boy! short and evil were thy days, but thy fame shall be immortal. Hadst thou been known to the munificent patrons of genius—

“ Unfortunate boy! poorly wast thou accommodated during thy short sojourning among us;—rudely wast thou treated,—so sorely did thy feeling soul suffer from the scorn of the unworthy; and there are, at last, those who wish to rob thee of thy only meed, thy posthumous glory. Severe too are the censurers of thy morals. In the gloomy moments of despondency, I fear thou hast uttered impious and blasphemous thoughts, which none can defend, and which neither thy youth, nor thy fiery spirit, nor thy situation, can excuse. But let thy more rigid censors reflect, that thou wast literally and strictly but a boy. Let many of thy bitterest enemies reflect what were their own religious principles, and whether they had any, at the age of fourteen, fifteen, and sixteen. Surely it is a severe and an unjust surmise, that thou wouldest probably have ended thy life as a victim of the laws, if thou hadst not finished it as thou didst; since the very act by which thou durst put an end to thy painful existence, proves that thou thoughtest it better to die, than to support life by theft or violence.

“ The speculative errors of a boy who wrote from the sudden suggestions of passion or despondency, who is not convicted of any immoral or dishonest act in consequence of his speculations, ought to be consigned to oblivion. But there seems to be a general and inveterate dislike to the boy, exclusively of the poet; a dislike which many will be ready to impute, and, indeed, not without the appearance of reason, to that insolence and envy of the little great, which cannot bear to acknowledge so transcendent and commanding a superiority in the humble child of want and obscurity.

“ Malice, if there was any, may surely now be at rest; for “ Cold he lies in the grave below.” But where were ye, O ye friends to genius, when, stung with disappointment, distressed for food and raiment, with every frightful form of human misery painted on his fine imagination, poor Chatterton sunk in despair? Alas! ye knew him not then, and now it is too late,—

For now he is dead;
Gone to his death bed,
All under the willow tree.

So sang the sweet youth, in as tender an elegy as ever flowed from a feeling heart.

“ In return for the pleasure I have received from thy poems, I pay thee, poor boy, the trifling tribute of my praise. Thyself thou hast emblazoned; thine own monument thou hast erected: But they whom thou hast delighted, feel a pleasure in vindicating thine honours from the rude attacks of detraction (x).”

(x) Knox's Essay, No. 114.

The poetic eulogiums have, however, exceeded, both in number and excellence, the compliments of critical writers. A few remarkably interesting and beautiful, I shall select, with the double view of adorning the work, and gratifying the reader.

A poet, whose superior elegance and classical taste do not appear to have met with all the applause they have deserved, thus speaks of Chatterton:

“ Yet as with streaming eye the sorrowing muse,
“ Pale CHATTERTON's untimely urn bedews;
“ Her accents shall arraign the partial care,
“ That shielded not her son from cold despair (y).”

(y) Pye's Progress of Refinement, Part 2.

There is a beautiful monody written by Mrs. Cowley, inserted in the last edition of Love and Madness.—It is as follows:

O CHATTERTON! for thee the pensive song I raise,
Thou object of my wonder, pity, envy, praise!
Bright Star of Genius!—torn from life and fame,
My tears, my verse, shall consecrate thy name!
Ye Muses! who around his natal bed
Triumphant sung, and all your influence shed;
APOLLO! thou who rapt his infant breast,
And in his dædal numbers shone confest,
Ah! why, in vain, such mighty gifts bestow?
—Why give fresh tortures to the Child of Woe?
Why thus, with barb'rous care, illumine his mind,
Adding new sense to all the ills behind?

Thou haggard Poverty! whose cheerless eye
Transforms young Rapture to the pond'rous sigh,
In whose drear cave no Muse e'er struck the lyre,
Nor Bard e'er madden'd with poetic fire;

Why all thy spells for CHATTERTON combine!
 His thought creative, why must thou confine?
 Subdu'd by thee, his pen no more obeys,
 No longer gives the song of ancient days;
 Nor paints in glowing tints from distant skies,
 Nor bids wild scen'ry rush upon our eyes——
 Check'd in her flight, his rapid Genius cowers,
 Drops her sad plumes, and yields to thee her powers.

Behold him, Muses! see your fav'rite son
 The prey of want, ere manhood is begun!
 The bosom ye have fill'd, with anguish torn——
 The mind you cherish'd, drooping and forlorn!

And now Despair her sable form extends,
 Creeps to his couch, and o'er his pillow bends.
 Ah, see! a deadly bowl the fiend conceal'd,
 Which to his eye with caution is reveal'd——
 Seize it, Apollo!—seize the liquid snare!
 Dash it to earth, or dissipate in air!
 Stay, helpless Youth! refrain—abhor the draught,
 With pangs, with racks, with deep repentance fraught!
 Oh, hold! the cup with woe ETERNAL flows,
 More—more than Death the pois'nous justice bestows!
 In vain!—he drinks—and now the searching fires
 Rush through his veins, and writhing he expires!
 No sorrowing friend, no sister, parent, nigh,
 To sooth his pangs, or catch his parting sigh;
 Alone, unknown, the Muse's darling dies,
 And with the vulgar dead unnoted lies!
 Bright Star of Genius!—torn from life and fame,
 My tears, my verse, shall consecrate thy name!

Nor has the Muse of Amwell been backward in commendation.

And BRISTOL! why thy scenes explore,
 And why those scenes so soon resign,
 And fail to seek the spot that bore
 That wonderful tuneful Youth of thine,
 The Bard, whose boasted ancient store
 Rose recent from his own exhaustless mine [Z]!

Though Fortune all her gifts denied,
 Though Learning made him not her choice,
 The Muse still placed him at her side,
 And bade him in her smile rejoice——
 Description still his pen supplied,
 Pathos his thought, and Melody his voice!

Conscious and proud of merit high,
 Fame's wreath he boldly claim'd to wear;
 But Fame, regardless, pass'd him by,
 Unknown, or deem'd unworth her care:
 The Sun of Hope forsook his sky;
 And all his land look'd dreary, bleak, and bare!

Then Poverty, grim spectre, rose,
 And horror o'er the prospect threw——
 His deep distress too nice to expose;
 Too nice for common aid to sue,
 A dire alternative he chose,
 And rashly from the painful scene withdrew.

[Z] *Rose recent from his own exhaustless mine!*

This is at least the Author's opinion, notwithstanding all that has hitherto appeared on the other side of the question. The last line alludes to one of the ingenious Mr. Mason in his Elegy to a young Nobleman:

“ See from the depths of his exhaustless mine
 “ His glittering stores the tuneful spendthrift
 “ throws.”

Ah!

Ah! why for Genius' headstrong rage
 Did Virtue's hand no curb prepare?
 What boots, poor youth! that now thy page
 Can boast the public praise to share,
 The learn'd in deep research engage,
 And lightly entertain the gentle fair?

Ye, who superfluous wealth command,
 O why your kind relief delay'd?
 O why not snatch'd his desperate hand?
 His foot on Fate's dread brink not stay'd?
 What thanks had you your native land
 For a new SHAKESPEARE or new MILTON paid!

For me—Imagination's power
 Leads oft insensibly my way,
 To where, at midnight's silent hour,
 The crescent moon's slow-westerling ray
 Pours full on REDCLIFF's lofty tower,
 And gilds with yellow light its walls of grey.

'Midst Toil and Commerce slumbering round,
 Lull'd by the rising tide's hoarse roar,
 There Frome and Avon willow-crown'd,
 I view sad-wandering by the shore,
 With streaming tears, and notes of mournful sound,
 Too late their hapless Bard, untimely lost, deplore.

The following lines are uncommonly animated and poetical:

If changing times suggest the pleasing hope,
 That Bards no more with adverse fortune cope;
 That in this alter'd clime, where Arts increase,
 And make our polish'd Isle a second Greece;
 That now, if Poesy proclaims her Son,
 And challenges the wreath by Fancy won;
 Both Fame and Wealth adopt him as their heir,
 And liberal Grandeur makes his life her care;
 From such vain thoughts thy erring mind defend,
 And look on CHATTERTON's disastrous end.
 Oh, ill-starr'd Youth, whom Nature form'd in vain,
 With powers on Pindus' splendid height to reign!
 O dread example of what pangs await
 Young Genius struggling with malignant fate!
 What could the Muse, who fir'd thy infant frame
 With the rich promise of Poetic fame;
 Who taught thy hand its magic art to hide,
 And mock the insolence of Critic pride;
 What cou'd her unavailing cares oppose,
 To save her darling from his desperate foes;
 From pressing Want's calamitous controul,
 And Pride, the fever of the ardent soul?
 Ah, see, too conscious of her failing power,
 She quits her Nursling in his deathful hour!
 In a chill room, within whose wretched wall
 No cheering voice replies to Misery's call;
 Near a vile bed, too crazy to sustain
 Misfortune's wasted limbs, convuls'd with pain,
 On the bare floor, with heaven-directed eyes,
 The hapless Youth in speechless horror lies!
 The pois'nous phial, by distraction drain'd,
 Rolls from his hand, in wild contortion strain'd:
 Pale with life-wasting pangs, it's dire effect,
 And stung to madness by the world's neglect,
 He, in abhorrence of the dangerous Art,
 Once the dear idol of his glowing heart,
 Tears from his Harp the vain detested wires,
 And in the frenzy of Despair expires (z)!

(z) Hayley's
 Essay on Epic
 Poetry, Ep. iv.
 l. 211 to 248.

Again,

Again, with all the honest resentment of indignant Genius,

Search the dark scenes where drooping Genius lies,
And keep from sorriest fights a nation's eyes,
That, from expiring Want's reproaches free,
Our generous country ne'er may weep to see
A future CHATTERTON by poison dead,
An OTWAY fainting for a little bread (a).

(a) *Ibid.* 336 to 342.

To these elegant offerings to the genius of Chatterton, it is with peculiar pleasure I add a sonnet to Expression, from the polished and pathetic pen of Miss Helen Maria Williams.

Expression, child of soul! I fondly trace
Thy strong enchantments, when the poet's lyre,
The painter's pencil catch thy sacred fire,
And beauty wakes for thee her touching grace—
But from this frightened glance thy form avert
When horrors check thy tear, thy struggling sigh,
When frenzy rolls in thy impassion'd eye,
Or guilt sits heavy on thy lab'ring heart—
Nor ever let my shudd'ring fancy bear
The wasting groan, or view the pallid look
Of him (b) the Muses lov'd—when hope forsook
His spirit, vainly to the Muses dear!
For charm'd with heav'nly song, this bleeding breast,
Mourns the blest power of verse could give despair no rest.—

(b) Chatterton.

Independently of the poems attributed to Rowley, Chatterton has left behind him a variety of pieces, published and unpublished. The most considerable of the former are to be found in a volume of miscellanies, published in 1778, to which is prefixed a sketch for the late Alderman Beckford's statue, a specimen of Chatterton's abilities in the arts of drawing and design; and this publication was followed in 1786, by "a supplement to the miscellanies of Thomas Chatterton." The compositions contained in both these volumes are scarcely to be inspected with all the severity of criticism. Considerable allowances ought to be made for the exercises of his infantine years, for the incorrect effusions of momentary resentment, for a few lines thrown together in a playful mood to please an illiterate female, or to amuse a school-fellow, and perhaps not less for the hasty and involuntary productions of indigence and necessity, constructed for a magazine, and calculated for the sole purpose of procuring a subsistence. Of the poetical part of these miscellanies, I have already intimated, that the serious are inferior to the satirical.

In the elegy to the memory of Mr. Thomas Phillips, of Fairford, we, however, meet with some descriptive stanzas, perhaps not unworthy the author of Rowley's poems:

"Pale rugged Winter bending o'er his head,
"His grizzled hair bedropt with icy dew;
"His eyes, a dusky light, congealed and dead;
"His robe, a tinge of bright ethereal blue.
"His train a motley'd, sanguine sable cloud,
"He limps along the russet dreary moor;
"Whilst rising whirlwinds, blasting, keen and loud,
"Roll the white surges to the sounding shore."

"Fancy, whose various, figure-tinctured vest
"Was ever changing to a different hue;
"Her head, with varied bays and flow'rets drest,
"Her eyes two spangles of the morning dew."

"Now as the mantle of the evening swells,
"Upon my mind I feel a thick'ning gloom!
"Ah! could I charm, by friendship's potent spells,
"The soul of Philip's from the deathly tomb!
"Then would we wander thro' the dark'ned vale,
"In converse such as heavenly spirits use,
"And borne upon the plumage of the gale,
"Hymn the creator and exhort the Muse (c)."

(c) Chatterton's Miscellanies.

In

In a letter to his friend Cary, dated London, July 1, 1770, Chatterton tells him, "in the last London Magazine, and in that which comes out to day, are the only two pieces of mine I have the vanity to call poetry." These were the two African Eclogues, published in his Miscellanies. I am sorry I cannot unite with the author in the commendation of these pieces; but Chatterton, as well as Milton, seems to have been incapable of estimating rightly the respective merits of his own productions (d). They are unconnected and unequal, though it must be confessed, that they contain some excellent lines: the following occur almost at the beginning of the first eclogue, and are animated, expressive and harmonious:

" High from the ground the youthful warriors sprung;
 " Loud on the concave shell the lances rung:
 " In all the mystic mazes of the dance,
 " The youths of Banny's burning sands advance,
 " Whilst the soft virgin, panting, looks behind;
 " And rides upon the pinions of the wind (e)."

(d) I know some respectable friends who esteem this instance of bad taste, as a strong presumptive argument against Chatterton being the author of Rowley's poems.

(e) Chatterton's Miscellanies, p. 56.

Of the correctness of the following simile in the second eclogue, I shall not determine; but the liveliness of the description evinces a most vigorous imagination.

" On Tiber's banks, close rank'd, a warring train;
 " Stretch'd to the distant edge of Galca's plain:
 " So when arrived at Gaigra's highest steep,
 " We view the wide expansion of the deep;
 " See in the gilding of her wat'ry robe,
 " The quick declension of the circling globe;
 " From the blue sea a chain of mountains rise,
 " Blended at once with water and with skies:
 " Beyond our sight in vast extension curl'd,
 " The check of waves, the guardian of the world (f)."

(f) Ibid.

The satire of Chatterton has more of the luxuriance, fluency, and negligence of Dryden, than of the terseness and refinement of Pope. The following lines are in the style of the former:

" Search nature o'er, procure me, if you can,
 " The fancied character, an honest man.
 " A man of sense not honest by constraint,
 " (For fools are canvass, living but in paint)
 " To Mammon, or to superstition slaves,
 " All orders of mankind are fools or knaves:
 " In the first attribute by none surpass'd,
 " * * * * endeavours to obtain the last (g)."

(g) Epistle to the Rev. Mr. Catcott, Append. to Chat. Mis. p. 23.

The following is an evident imitation of Mr. Pope, even to the cadence of the verse, but it is not equally successful with the last specimen:

" But why must Chatterton selected fit,
 " The butt of every Critic's little wit?
 " Am I alone for ever in a crime,
 " Nonsense in prose, or blasphemy in rhyme?
 " All monosyllables a line appears!—
 " Is it not very often so in Shears?
 " See gen'rous Eccas, length'ning out my praise,
 " Inraptured with the music of my lays;
 " In all the arts of panegyric grac'd,
 " The cream of modern literary taste (h)."

(h) The Defence, *ibid.* p. 37.

In a poem on Happiness, inserted in Love and Madness, are some strokes of satire in a superior style:

" Come to my pen, companion of the lay,
 " And speak of worth, where merit—
 " Let lazy B—— undistinguish'd snore,
 " Nor lash his generosity to ———,
 " Praise him for sermons of his curate bought,
 " His easy flow of words, his depth of thought;

" His active spirit ever in display,
 " His great devotion when he draws to pray,
 " His fainted soul distinguishably seen,
 " With all the virtues of a modern Dean (i)."

(i) Love and
 Madness, p. 155.

" Pulvis, whose knowledge centres in degrees,
 " Is never happy but when taking fees:
 " Blest with a bushy wig and solemn pace,
 " Catcott admires him for a *fossile* face."
 — " Mould'ring in dust the fair Lavinia lies,
 " Death and our Doctor clos'd her sparkling eyes.
 " O all ye pow'rs, the guardians of the world!
 " Where is the useless bolt of vengeance hurl'd?
 " Say, shall this leaden sword of plague prevail,
 " And kill the mighty where the mighty fail?
 " Let the red bolus tremble o'er his head,
 " And with his guardian julep strike him dead (k)!"

(k) *Ibid.* p. 156.

In the volume of his miscellanies are two political pieces, the *Consiliad*, written at Bristol, and in the highest strain of party scurrility [AA]; and the *Prophecy*, written apparently a short time after, which is in the best style of Swift's minor pieces, and appears to be the genuine effusion of that enthusiastic love of liberty, which in tumultuous times generally takes possession of young and sanguine dispositions [BB].

Of

[AA] *In the highest strain of party scurrility.*
 The introduction to this poem is not destitute of merit.

Of warring senators, and battles dire,
 Of quails uneaten; Muse, awake the lyre.
 Where C—pb—ll's chimneys overlook the square,
 And N—t—n's future prospects hang in air;
 Where counsellors dispute, and cockers match,
 And Caledonian earls in concert scratch;
 A group of heroes, occupied the round,
 Long in the rolls of infamy renown'd.
 Circling the table all in silence sat,
 Now tearing bloody lean, now champing fat;
 Now picking ortolans, and chicken slain,
 To form the whimsies of an *à-la-reine*:
 Now storming castles of the newest taste,
 And granting articles to forts of paste:
 Now swallowing bitter draughts of Prussian beer;
 Now sucking tallow of salubrious deer.

[BB] *Takes possession of young and sanguine dispositions.*

THE PROPHECY.

THIS truth of old was sorrow's friend,
 " Times at the worst will surely mend."
 The difficulty's then to know,
 How long oppression's clock can go;
 When Britain's sons may cease to sigh,
 And hope that their redemption's nigh.

When Vice exalted takes the lead,
 And Vengeance hangs but by a thread;
 Gay péeresses turn'd out o'doors;
 Whoremasters, peers, and sons of whores;
 Look up, ye Britons! cease to sigh,
 For your redemption draweth nigh.

When vile Corruption's brazen face,
 At council-board shall take her place;
 And lord's-commissioners resort,
 To welcome her at Britain's court;
 Look up, ye Britons! cease to sigh,
 For your redemption draweth nigh.

See Pension's harbour large and clear,
 Defended by St. Stephen's pier!
 The entrance safe, by Current led,
 Tiding round G—'s jetty head;
 Look up, ye Britons! cease to sigh,
 For your redemption draweth nigh.

When Civil-Power shall snore at ease,
 While soldiers fire—to keep the peace;
 When murders sanctuary find,
 And petticoats can Justice blind;
 Look up, ye Britons! cease to sigh,
 For your redemption draweth nigh.

Commerce o'er Bondage will prevail,
 Free as the wind, that fills her sail.
 When she complains of vile restraint,
 And Power is deaf to her complaint;
 Look up, ye Britons! cease to sigh,
 For your redemption draweth nigh.

When raw projectors shall begin
 Oppression's hedge, to keep her in;
 She in disdain will take her flight,
 And bid the Gotham fools good night;
 Look up, ye Britons! cease to sigh,
 For your redemption draweth nigh.

When tax is laid, to save debate,
 By prudent ministers of state;
 And, what the people did not give,
 Is levied by prerogative;
 Look up, ye Britons! cease to sigh,
 For your redemption draweth nigh.

When Popish bishops dare to claim
 Authority, in George's name;
 By Treason's hand set up, in spite
 Of George's title, William's right;
 Look up, ye Britons! cease to sigh,
 For your redemption draweth nigh.

When Popish priest a pension draws
 From starv'd exchequer, for the cause
 Commission'd, proselytes to make
 In British realms, for Britain's sake;
 Look up, ye Britons! cease to sigh,
 For your redemption draweth nigh.

When snug in power, fly recusants
 Make laws for British Protestants;
 And d—g William's Revolution,
 As Justices claim execution;
 Look up, ye Britons! cease to sigh,
 For your redemption draweth nigh.

When soldiers, paid for our defence,
 In wanton pride slay innocence;
 Blood from the ground for vengeance reeks,
 Till Heaven the inquisition makes;

Look

Of the prose compositions of Chatterton, his imitations of Ossian are certainly the worst: he has not indeed improved upon an indifferent model. They are full of wild imagery and inconsistent metaphor, with little either of plot or of character to recommend them.

His lighter Essays, such as the adventures of a star, the memoirs of a sad dog, the hunter of oddities, &c. display considerable knowledge of what is called the town, and demonstrate the keenness of his observation, and his quickness in acquiring any branch of knowledge, or in adapting himself to any situation. We are to remember, however, that he had been long conversant in this species of composition, and that a considerable fund of reading in Magazines, Reviews, &c. which Mr. Warton observes "form the *school of the people*," had prepared him well to exercise the profession of a periodical writer. Antiquities, however, constituted his favorite study, and in them his genius always appears to the greatest advantage. Even the most humorous of his pieces (Tony Selwood's letter (l)) derives its principal excellence from his knowledge of ancient customs.

(l) Chat. Misc.
p. 209.

In the volume of Miscellanies attributed to him, there are some pieces to which his title is not well ascertained. Some with the signature of Asaphides, are claimed by one Lockstone, a Linen-Draper, and a particular acquaintance of Chatterton; and the story of Maria Friendless, which Chatterton himself sent to the Town and Country Magazine, probably for the sake of obtaining an immediate and necessary supply of money, is almost a literal transcript of the letter of Misella in the Rambler.

If the reputation of Chatterton, however, rested solely on those works, which he acknowledged as his own, it would neither be so extensive as it is, nor probably so permanent as it is likely to continue. Rowley's poems have deservedly immortalized the name of Chatterton, and the controversy which their publication excited, is the most curious and extraordinary controversy, which, since the days of Bentley, has divided the literary world.

I have already noticed the manner in which these poems are said to have been discovered. The account which Chatterton himself gave of the supposed author is nearly as follows:

THOMAS ROWLEY was born at Norton Mal-seward in Somersetshire, and educated at the convent of St. Kenna, at Keynesham (m). He was of the clerical profession, was confessor to the two Canynge's, Robert and William, about the latter end of the reign of Henry the VIth, or about the beginning of that of Edward IV.; and was at least connected with our Lady's church in Bristol (n); though he is elsewhere styled the "parish priest of St. John's, in the city of Bristol (o)." After the death of Mr. Robert Canynge, (who at his brother's desire, bequeathed Rowley 100 marks) he was employed by that brother, Mr. William, to travel through a considerable part of England to collect drawings. Mr. Canynge was so well satisfied with his success, that he rewarded him with a purse of two hundred pounds, and promised him that he should never be in want. He continued afterwards the confidential friend of Canynge. He wrote a variety of poems, many of them addressed to that extraordinary character. He first lived in a house on the hill, and afterwards in one by the Tower (p): he survived his patron, and died at Westbury, in Gloucestershire (q). Such is Chatterton's account: but it is only fair to mention, that the existence of any such person as Rowley, is totally denied by the disputants on one side of the controversy.

(m) Note prefixed to "Ballade of Charitie." Rowley's poems, p. 203.

(n) Mem. of Sir W. Canynge, Chat. Misc. p. 122.

(o) Introd. to the Battle of Hastings, Rowley's poem, p. 21.

(p) Chat. Misc. p. 127 & 128.

(q) Rowley's Poems, p. 203.

There can, however, be no doubt concerning the existence of W. Canynge, the patron of Rowley, since it is attested by such a number of contemporary historians, and his remains lie interred in the church of which he was the founder. He is called by Chatterton, Sir William Canynge. He was the younger son of a citizen of Bristol, and in his youth afforded early prognostics of wisdom and ability. He was of a handsome person, and

Look up, ye Britons! cease to sigh,
For your redemption draweth nigh.

When at Bute's feet poor Freedom lies,
Mark'd by the priest for sacrifice,
And doom'd a victim, for the sins
Of half the *outs*, and all the *ins*;
Look up, ye Britons! cease to sigh,
For your redemption draweth nigh.

When Stewards pass a *boot* account,
And credit for the gross amount;
Then to replace exhausted store,
Mortgage the land to borrow more;
Look up, ye Britons! cease to sigh,
For your redemption draweth nigh.

When scrutineers, for private ends,
Against the vote declare their friends;
Or judge, as you stand there alive,
That five is more than forty-five;
Look up, ye Britons! cease to sigh,
For your redemption draweth nigh.

When George shall condescend to hear
The modest suit, the humble prayer;
A prince, to purpled pride unknown!
No favourites disgrace the throne!
Look up, ye Britons! sigh no more,
For your redemption's at the door.

When time shall bring your wish about,
Or, seven-years lease, *you sold*, is out;
No future contract to fulfil;
Your tenants holding at your will;
Raise up your heads! your right demand!
For your redemption's in your hand.

Then is your time to strike the blow,
And let the *slaves* of Mammon know,
Britain's true sons A BRIBE can scorn,
And die as *free* as they were born.
VIRTUE again shall take her seat,
And your redemption stand compleat.

married

married for love, without a fortune. Soon after his marriage, his father and his eldest brother (who both loved money as much as he despised it) died, and left him large estates in land and money, and his brother John dependent upon him, whom he placed in such an advantageous line of business, that he afterwards became Lord-Mayor of London.

This dawn of prosperity was, however, soon clouded by the death of his wife; to whose memory he afforded the most affectionate testimony, in rejecting the most splendid proposals for a second marriage. Of his native city he was Mayor five times; and in the year 1461, when Sir Baldwin Fulford was executed for treason, Canynge being then Mayor, pleaded for the criminal in vain. When he was knighted does not appear; but in the year 1467, a second marriage being proposed by the King, between him and one of the Widdeville, (the Queen's) family, Sir William went into holy orders purposely to avoid it; and was ordained Acolythe by his friend Carpenter, Bishop of Worcester, the 19th of September. He was afterwards Dean of the Collegiate church of Westbury in Wilts. With his usual munificence he rebuilt that college, and died in the year 1474, with the universal character of learning and virtue. Among the proofs of his munificence there still exist an alms-house or hospital, with a chapel, and the beautiful church of St. Mary Redcliffe, in Bristol (r). At a great expense he had collected a cabinet of curiosities (s). His collection of manuscripts, among which were copies of his own and Rowley's poems, were deposited in a room in Redcliffe church: of the actual or pretended discovery of which I have already treated. Such is Chatterton's history of Canynge, in which, though there are some facts, which are amply confirmed, there are also several which are disputed by those who deny the authenticity of Rowley's poems.

(r) Story of W. Canynge, Rowley's poems, Ch. t. Miscel. p. 112 to 122.
(s) *Ibid.*

These poems, we have already seen, were produced by Chatterton at different times, who asserted that he had copied them from the fragments of those ancient parchments, which his father had procured from the Redcliffe chest. He could never be prevailed upon to produce any originals, except a few fragments, the largest not more than eight inches long, and four and a half wide. The writing on these fragments was at least a tolerable imitation of ancient manuscript, and the parchment or vellum had every mark of age. The only poetical originals which he produced were, the challenge to Lydgate, the song to Ella, and Lydgate's answer, all contained in one parchment; the account of W. Canynge's feast; the epitaph on Robert Canynge, and part of the story of W. Canynge. Besides these there are some prose compositions, and a few drawings, still in the hands of Mr. Barrett [CC].

The poems attributed to Rowley were first collected in an octavo volume, and published by Mr. Tyrwhitt, the learned editor of Chaucer. A very splendid edition was afterwards published in quarto, by the late Dr. Milles, Dean of Exeter, and President of the Society of Antiquaries, with a preliminary dissertation, and notes tending to prove that they were really written by Rowley and others in the 15th century.

The poetical merit of these pieces is considerable. The subjects are interesting, and infinite imagination is displayed in the construction of the plots or fables, in the arrangement of the incidents, and the delineation of the characters. The beauties of poetry are scattered through them with no sparing hand. The Lyric productions in particular, such as the chorusses in the Tragedies, abound with luxuriant description, most vivid imagery, and striking metaphors. Through the veil of ancient language a happy adaptation of

[CC] *Still in the hands of Mr. Barrett.*] A complete list of the original parchments, which were given to Mr. Barrett by Chatterton, and which he has now in his hands, was communicated by that Gentleman to Dr. Milles, and is as follows:

The Song to Ella, with the challenge to Lydgate and the Answer. This poem was sent by Mr. Barrett to a friend, and is unfortunately lost.

Canynge's Feast, a Poem.

The first thirty-six lines of the Storie of William Canyne.

The following are Historical Prose Compositions.

1. The Yellow Roll, containing an account of the origin of coinage in England, and of the curiosities in Canynge's cabinet. This also was lent with the song to Ella, by Mr. Barrett to a friend, and is lost.
2. The purple Roll, thirteen inches by ten, containing an account of particular Coins, and the second and third Sections of Turgotus's History of Bristol. N. B. The first Section above quoted is also extant in Chatterton's own hand, but the original does not appear.
3. Vita Burtoni, a parchment roll, about eight inches long, and four broad, very closely written; con-

taining an account of Sir Simon de Burton, and his rebuilding Redcliff church.

4. Knights Templars Church; a History of its foundation, &c.
5. St. Mary's Church of the Port; a History of it from its foundation, ending with the verses on Robert Canynge.
6. Roll of Bartholomew's Priory, with a List of the Priors.
7. An account of the Chapel and House of Calendars; a drawing of the chapel, and underneath an explanation of it.
8. Ella's Chappel. No drawing, except to the Kist of Ella, but there is an account of its foundation.
9. St. Mary Magdalen's Chapel. A drawing only.
10. Grey Friars Church. A drawing only.
11. Drawing of three monumental Inscriptions.
12. Ancient Monument and Rudhall: mere delineations.
13. Lesser and Greater St. John's: only a rude delineation.
14. Several Drawings of the Castle of Bristol.
15. Strong Hold of the Castle: a drawing and account of its foundation, by Robert Earl of Gloucester, and Site thereof.
16. Old Wall of Bristol; mere drawings.
17. Carne of Robert Curthoses Mynde in Castle steed: a drawing or figure, with the words *Carne*, &c. underneath (14).

(14) Milles's Rowley, p. 438.

words

words is still apparent, and a style both energetic and expressive. Contrary to almost all the poetical productions of the times, when they are supposed to have been composed, they are in general conspicuous for the harmony and elegance of the verse. Indeed, some passages are inferior in none of the essentials of poetry, to the most finished productions of modern times.

On the other hand, it must not be dissembled that some (and many will think no inconsiderable) part of the charm of these poems may probably result from the Gothic sublimity of the style. Whatever is vulgar in language is lost by time, and a small degree of obscurity in an ancient author gives a latitude to the fancy of the reader, who generally imagines the style to be more forcible and expressive than perhaps it intrinsically is. We gaze with wonder on an antique fabrick; and when novelty of thought is not to be obtained, the novelty of language to which we are unaccustomed, is frequently accepted as a substitute. Most poets therefore, at least such as have aspired to the sublime, have thrown their dialect at least a century behind the common prose, and colloquial phraseology of their time: nor can we entertain a doubt, but that even Shakespeare and Milton have derived advantages from the antique structure of some of their most admired passages. The facility of composition is also greatly increased where full latitude is permitted in the use of an obsolete dialect; since an author is indulged in the occasional use of both the old and the modern phraseology; and if the one does not supply him with the word for which he has immediate occasion, the other in all probability will not disappoint him.

That the subjects of Rowley's poems are in general interesting and well chosen, cannot, I think, be doubted by the judicious reader; but still it must be confessed, that the detail is occasionally heavy, flat, and insipid. The imagery and metaphors are frequently very common-place, and it is possible to labour through several stanzas without finding any striking beauty, when the attention of the reader is kept alive by the subject alone. Many defects of style, and many passages of rant and bombast are concealed or excused by the appearance of antiquity; and where the harmony of the verse (which indeed is not often the case) is, perhaps, radically deficient, we are inclined to attribute it to a different mode of accenting, or to our ignorance of the ancient pronunciation.

The piece of most conspicuous merit in the collection, is *Ella*, a Tragical Interlude, which is a complete and well-written tragedy. The plot is both interesting and full of variety, though the dialogue is in some places tedious. The character of *Celmonde* reminds us of *Glenalvon* in *Douglas*, but it is better drawn: His soliloquy is beautiful and characteristic [DD]. The first chorus, or "Mynstrelles Songe" in this piece, is a perfect pastoral. It abounds in natural and tender sentiments, and apposite imagery, and the fertility of the author's genius is displayed in this little ballad; since short as it is, it contains a complete plot or fable [EE].

There

C E L M O N D E.

Hope, hallie suster, sweepeynge thro' the skie,
In crowne of goulde, and robe of lillie whyte,
Whyche farre abrode ynne gentle ayre doe flie,
Meetyng from distaunce the enjoyous fyghte,
Albeyt thou takest thie hie flyghte
Heket yinne a myste, and wyth thyne eyne
yblente,
Nowe comest thou to mee wythe starrie lyghte;
Ontoe thie veste the rodde sonne ys adente;
The Sommer tyde, the month of Maie appere,
Depycte wythe skylledd honde upponn thie wyde
aumere.

I from a nete of hopelen am adawed,
Awhaped atte the fetyveness of daie;
Ælla, bie nete moe than hys myndbruche awed,
Is gone, and I m'le followe, toe the fraie.
Celmonde canne ne'er from anie byker staie.
Dothe warre begynne? there's Clemonde yn the
place.

Botte whanne the warre ys donne, I'll haste awaie.
The reste from nethe tymes masque must shew yttes
face.

I see onnumbered joies arounde mee ryse;
Blake stonde the future doome, and joie dothe mee
alyse.

O honnoure, honnoure, whatt ys bie thee hanne?
Hailie the robber and the bordelyer,
Who kens ne thee, or ys to thee bestanne,
And nothyng does thie myckle gaste fere.

Vol. IV.

Faynge woulde I from mie bosomme all thee tare.
Thou there dysperpellest thie levynne-bronde;
Whylest mie soulgh's forwyned, thou art the gare;
Sleene ys mie comforte bie thie ferie honde;
As somme talle hylle, whann wynds doe shake the
ground,
Itte kerveth all abroade, bie brasseyng hyltren
wounde.

Honnoure, whatt bee ytte? tys a shadowes shade,
A thyng of wychencref, an idle dreame;
On of the fonnis whych the clerche have made
Menne wydhoute sprytes, and wommen for to fleme;
Knyghtes, who este kenne the loude dynne of the
beme,
Schulde be forgarde to fyke enfeebyllyng waies,
Make everych acte, alyche theyr soules, be breme,
And for theyre chyvalrie alleynne have prayse.
O thou, whateer thie name,
Or Zabalus or Queed,
Comme, steel mie sable spryte,
For freinde and dolefalle dede.

[EE] *It contains a complete plot or fable.*

M A N N E.

Tourne thee to thie Shepster swayne;
Bryghte sonne has ne droncke the dewe
From the floures of yellowe hue;
Tourne thee, Alyce, backe agayne.

There are extant two parts, or rather two different copies of the Battle of Hastings. These appear to have been higher in the estimation of Chatterton, as well as of Dr. Milles, than most of the other productions of Rowley. When Chatterton brought the first part to Mr. Barrett, being greatly pressed to produce the poem in the original hand-writing, he at last said, that he had written this poem himself for a friend; but that he had another, the copy of an original by Rowley: and being then desired to produce that poem, he brought, after some time, to Mr. Barrett, the poem which is marked in Mr. Tyrwhit's and Dr. Milles's editions, as No. 2*.

(*) Introd. Account prefixed to Rowley's poems, p. 21.

The first of these poems I cannot help classing among the most inferior of Rowley's. The mere detail of violence and carnage, with nothing to interest curiosity, or engage the more tender passions, can be pleasing to few readers. There is not a single episode to enliven the tedious narrative, and but few of the beauties of poetry to relieve the mind from the disgusting subject.

The second part is far superior. There is more of poetical description in it, more of nature, more of character. The imagery is more animated, the incidents more varied. The character of Tancarville is well drawn, and the spirit of candour and humanity which pervades it, is perhaps unparalleled in any writer before the age of Shakespeare. The whole episode of Gyrtha is well conducted, and the altercation between him and his brother Harold, is interesting. But the description of morning [FF], and that of Salisbury plain [GG], would be alone sufficient to rescue the whole poem from oblivion, and

[FF] *The description of morning.*

AND now the greie-eyd morne with vi'lets drest,
Shakyng the dewdrops on the flourie meedes,
Fled with her rosie radiance to the West:
Forth from the Easterne gatte the fyerie ſteedes
Of the bright sunnie awaytynge ſpirits leedes:
The sunne, in fierie pompe enthroned on hie,
Swyfter than thoughte alonge hys jernie gledes,
And ſcatters nyghtes remaynes from oute the ſkie:
He ſawe the armies make for bloudie fraie,
And ſtopt his driving ſteeds, and hid his lyghtſome
raye.

[GG] *And that of Salisbury Plain.*

WHERE fruytleſs heathes and meadows cladde in
greie,
Save where derne hawthornes reare theyr humble
heade,
The hungrie traveller upon his waie
Sees a huge defarte all arounde hym ſpredde,
The diſtaunte citie ſcantlie to be ſpedde,
The curlyng force of ſmoke he ſees in vayne,
'Tis too far diſtaunte, and hys onlie bedde
Iwimpled in hys cloke ys on the playne,
Whyſte rattlyng thonder forrey oer his hedde,
And raines come down to wette hys harde uncouthlie
bedde.

A wondrous pyle of rugged mountaynes ſtandes,
Placd on eche other in a dreare arraie,
It ne could be the worke of human handes,
It ne was reared up bie menne of claie.
Here did the Brutons adoration paye
To the falſe god whom they did Tauran name,
Dightynge hys altarre with greete fyres in Maie,
Roastyng their vyctualle round aboute the
flame,

'Twas here that Hengyſt did the Brytons flee,
As they were mette in council for to bee.

to entitle it to a place upon a classic shelf. The utmost efforts of the author, however, cannot always impart interest or variety to the dull catalogue of names, which have ceased to be remembered, and the unvaried recital of wounds and deaths. But Homer himself nods when engaged upon a topic so unfavourable to genius.

The Bristowe Tragedy, or the Deathe of Syr Charles Bawdin, has little but its pathetic simplicity to recommend it. There is nothing ingenious in the plot, or striking in the execution; and it only ranks upon a par with a number of tragic ballads, both ancient and modern, in the same style.

The eclogues are to be accounted some of the most perfect specimens among the poems of Rowley. Indeed, I am not acquainted with any pastorals superior to them, either ancient or modern. The first of them bears a remote resemblance to the first eclogue of Virgil; and contains a beautiful and pathetic picture of the state of England, during the civil wars between the houses of York and Lancaster. The thoughts and images are all truly pastoral; and it is impossible to read it, without experiencing those lively, yet melancholy feelings, which a true delineation of nature alone can inspire. I cannot help feeling an irresistible inclination to present the reader with two stanzas, which have ever appeared to me particularly beautiful.

The second eclogue is an eulogium on the actions of Richard I. in the Holy-land, which will be read with additional pleasure by those who have seen the short but spirited sketch of these wars in Mr. Gibbon's last volumes. The poem is supposed to be sung by a young shepherd, whose father is absent on the Holy war: and the Epode, or burthen, is happily imagined:

"Sprytes of the blest, and every seyncte ydedde,
"Pour out your pleasaunce on my fadre's hedde."

Before he has concluded his song, he is cheered by the sight of the vessel in which his father returns victorious.

The third pastoral is chiefly to be admired for its excellent morality. It is, however, enlivened by a variety of appropriate imagery, and many of the ornaments of true poetry.

The last of these pastorals, called Elinoure and Juga, is one of the finest pathetic tales I have ever read. The complaint of two young females lamenting their lovers slain in the wars of York and Lancaster, was one of the happiest subjects that could be chosen for a tragic pastoral. Two stanzas of this poem, will, I flatter myself, amply justify this opinion. Part of the former has been supposed, by the Anti-Rowleians, to be an imitation of a stanza in Mr. Gray's elegy,

"The breezy call of incense breathing morn, &c."

WHERE fruytles heathes and meadows cladde in
greie,
Save where derne hawthornes reare theyr humble
heade,
The hungrie traveller upon his waie
Sees a huge defarte all arounde hym spredde,
The distaunte citie scantlie to be spedde,
The curlyng force of smoke he sees in vayne,
'Tis too far distaunte, and hys onlie bedde
Iwimpled in hys cloke ys on the playne,
Whylste rattlyng thonder forrey oer his hedde,
And raines come down to wette hys harde uncouthlie
bedde.

A wondrous pyle of rugged mountaynes standes,
Placd on eche other in a dreare arraie,
It ne could be the worke of human handes,
It ne was reared up bie menne of claie.
Here did the Brutons adoration paye
To the false god whom they did Tauran name,
Dightynge hys altarre with greete fyres in Maie,
Roastyng their vyctualle round aboute the
flame,
'Twas here that Hengyst did the Brytons flee,
As they were mette in council for to bee.

to entitle it to a place upon a classic shelf. The utmost efforts of the author, however, cannot always impart interest or variety to the dull catalogue of names, which have ceased to be remembered, and the unvaried recital of wounds and deaths. But Homer himself nods when engaged upon a topic so unfavourable to genius.

The Bristowe Tragedy, or the Deathe of Syr Charles Bawdin, has little but its pathetic simplicity to recommend it. There is nothing ingenious in the plot, or striking in the execution; and it only ranks upon a par with a number of tragic ballads, both ancient and modern, in the same style.

The eclogues are to be accounted some of the most perfect specimens among the poems of Rowley. Indeed, I am not acquainted with any pastorals superior to them, either ancient or modern. The first of them bears a remote resemblance to the first eclogue of Virgil; and contains a beautiful and pathetic picture of the state of England, during the civil wars between the houses of York and Lancaster. The thoughts and images are all truly pastoral; and it is impossible to read it, without experiencing those lively, yet melancholy feelings, which a true delineation of nature alone can inspire. I cannot help feeling an irresistible inclination to present the reader with two stanzas, which have ever appeared to me particularly beautiful.

The second eclogue is an eulogium on the actions of Richard I. in the Holy-land, which will be read with additional pleasure by those who have seen the short but spirited sketch of these wars in Mr. Gibbon's last volumes. The poem is supposed to be sung by a young shepherd, whose father is absent on the Holy war: and the Epode, or burthen, is happily imagined:

"Sprytes of the blest, and every seyncte ydedde,
"Pour out your pleasaunce on my fadre's hedde."

Before he has concluded his song, he is cheered by the sight of the vessel in which his father returns victorious.

The third pastoral is chiefly to be admired for its excellent morality. It is, however, enlivened by a variety of appropriate imagery, and many of the ornaments of true poetry.

The last of these pastorals, called Elinoure and Juga, is one of the finest pathetic tales I have ever read. The complaint of two young females lamenting their lovers slain in the wars of York and Lancaster, was one of the happiest subjects that could be chosen for a tragic pastoral. Two stanzas of this poem, will, I flatter myself, amply justify this opinion. Part of the former has been supposed, by the Anti-Rowleians, to be an imitation of a stanza in Mr. Gray's elegy,

"The breezy call of incense breathing morn, &c."

Alle nete amenge the gravde chyrche³ glebe will goe,
And to the passante Spryghtes lecture⁴ mie tale of woe.

- 3 Church-yard.

- 4 Relate.

JUGA.

There are extant two parts, or rather two different copies of the Battle of Hastings. These appear to have been higher in the estimation of Chatterton, as well as of Dr. Milles, than most of the other productions of Rowley. When Chatterton brought the first part to Mr. Barrett, being greatly pressed to produce the poem in the original hand-writing, he at last said, that he had written this poem himself for a friend; but that he had another, the copy of an original by Rowley: and being then desired to produce that poem, he brought, after some time, to Mr. Barrett, the poem which is marked in Mr. Tyrwhit's and Dr. Milles's editions, as No. 2*.

(*) Introd. Account prefixed to Rowley's poems, p. 21.

The first of these poems I cannot help classing among the most inferior of Rowley's. The mere detail of violence and carnage, with nothing to interest curiosity, or engage the more tender passions, can be pleasing to few readers. There is not a single episode to enliven the tedious narrative, and but few of the beauties of poetry to relieve the mind from the disgusting subject.

The second part is far superior. There is more of poetical description in it, more of nature, more of character. The imagery is more animated, the incidents more varied. The character of Tancarville is well drawn, and the spirit of candour and humanity which pervades it, is perhaps unparalleled in any writer before the age of Shakespeare. The whole episode of Gyrtha is well conducted, and the altercation between him and his brother Harold, is interesting. But the description of morning [FF], and that of Salisbury plain [GG], would be alone sufficient to rescue the whole poem from oblivion, and

The second eclogue is an eulogium on the actions of Richard I. in the Holy-land, which will be read with additional pleasure by those who have seen the short but spirited sketch of these wars in Mr. Gibbon's last volumes. The poem is supposed to be sung by a young shepherd, whose father is absent on the Holy war: and the Epode, or burthen, is happily imagined:

"Sprytes of the blest, and every feyncte ydedde,
"Pour out your pleasaunce on my fadre's hedde."

Before he has concluded his song, he is cheered by the sight of the vessel in which his father returns victorious.

The third pastoral is chiefly to be admired for its excellent morality. It is, however, enlivened by a variety of appropriate imagery, and many of the ornaments of true poetry.

The last of these pastorals, called Elinoure and Juga, is one of the finest pathetic tales I have ever read. The complaint of two young females lamenting their lovers slain in the wars of York and Lancaster, was one of the happiest subjects that could be chosen for a tragic pastoral. Two stanzas of this poem, will, I flatter myself, amply justify this opinion. Part of the former has been supposed, by the Anti-Rowleians, to be an imitation of a stanza in Mr. Gray's elegy,

"The breezy call of incense breathing morn, &c."

E L I N O U R E.

No moe the miskynette¹ shall wake the morne,
The minstrelle daunce, good cheere, and morryce plaie;

The ballad of Charity is an imitation of the most beautiful and affecting of our Saviour's parables, the good Samaritan.—The poetical descriptions are truly picturesque. We feel the horror of the dark, cold night; we see "the big drops fall," and the "full flocks driving o'er the plain." "The welkin opens, and the yellow light'ning flies." "The thunder's rattling found moves slowly on, and swelling, bursts into a violent crash; shakes the high spire," &c. If Chatterton were really the author of this poem, he probably alluded to his own deserted situation, since, it is said, he gave it to the publisher of the Town and Country Magazine, only a month before his death:

¹ The grave.³ Coffin.⁵ Among.

"Knights and barons live for pleasure and themselves."

² Unfortunate.⁴ A sleeping room.

The lesser pieces in this collection are not without merit. There is much elegant satire in the two epistles to Canynge prefixed to Ella [HH]; and some strokes of pleasantry in the "Storie of Canynge."

As a complete specimen of this author's abilities in Lyric composition, it is only necessary to cite the incomparable Ode or Chorus in Goddwyn, a tragedy, which he has left imperfect.

CHORUS, &c.

When Freedome, dreste yn blodde-steyned veste,

To everie knyghte her warre-songe funge,

The poems of Rowley had not been long made public before their authenticity underwent a severe scrutiny; and a number of Gentlemen, conversant in antiquities, declared, that they could not be the productions of the fifteenth century, and openly pronounced them the forgeries of Chatterton. Their authenticity was defended by other persons of no inconsiderable note in the literary world. The controversy soon became voluminous; and the reader will not be inclined to consider it as unimportant, when on one side the names of Walpole, Tyrwhitt, Warton [II], Croft, and Malone, are mentioned; and on the other, those of Milles and Bryant; and I think I may venture to add, that of Mr. Matthias, though his candour and modesty almost exempt him from being considered as a partisan.

I shall endeavour to exhibit a short sketch of the arguments on both sides of the question, and shall leave my readers to form their own conclusions.

The evidence on this subject naturally divides itself into two branches, external and internal. Of the former, there is little satisfactory to be obtained; and it must be confessed, that the bulk of the external evidence is rather against that party which denies the authenticity of the poems. There are, however, a few facts on that side of the question which are of too much consequence to be disregarded.

ARGUMENTS AGAINST THE AUTHENTICITY OF ROWLEY'S POEMS.

External Evidence.

I. The first serious objection which occurs against the authenticity of the poems, is, that Chatterton never could be prevailed upon to produce more than four of the originals, and these extremely short, the whole not containing more than one hundred and twenty-four verses (t). Had such a treasure of ancient poetry fallen into the hands of a young and ingenuous person, would he, it is said, have cautiously produced them to the world one by one? Would he not rather have been proud of his good fortune? Would not the communicativeness of youth have induced him to blaze the discovery abroad, and to call every lover of poetry and antiquity, to a participation of the pleasure? Would not the hope and offers of reward at least have prevented his destroying what, if preserved, would certainly be productive of profit, but the destruction of which could answer no purpose whatever (u)?

II. The deficiency of proof in favour of Rowley, is strongly aided by the very probable proofs in favour of Chatterton. His abilities were in every respect calculated for such a deception. He had been in the habit of writing verses from his earliest youth, and produced some excellent poetry. He was known to have been conversant with our old English Poets and Historians, particularly Chaucer. His fondness for heraldry, intro-

[II] *The names of* — Tyrwhitt, Warton.] I if the poems therefore be forgeries of Chatterton, have been well informed that both Mr. Warton and these Gentlemen were at least among the first on Tyrwhitt were formerly of sentiments directly opposite to those which they profess in their publications: whom he imposed.

(t) Tyrwhitt's Vindication, p. 133.

(u) An examination, &c. p. 9. Tyrwhitt's Vindication, p. 155. See also some excellent remarks to the same purpose, by the late Mr. Badcock, Monthly Review for May, 1782.

duced many books of antiquities to his notice; and even his profession disposed him to these studies, and enabled him with facility to imitate ancient writings. In *the Christmas games*, which are acknowledged to be his own, there is much of that peculiar learning in British antiquities, which was necessary to lay the foundation of Rowley's poems; and in his Essay on Sculpture, there is much of the same general information with which those compositions abound [KK]. The transport and delight, which Chatterton always discovered on reading the poems to Mr. Smith, his sister, and his different friends, could not, it is said, have resulted from the mere pleasure of a discovery. It was the secret, but ardent feeling of his own abilities, and the consciousness that the praises which were bestowed upon them were all his own, which filled him with exultation, and produced those strong emotions which even his habitual reserve on this subject was unable to conceal (w).

III. The declaration of Chatterton to Mr. Barrett, concerning the first part of the Battle of Hastings, which he confessed *he had written himself*, is a presumption against the rest. He was then taken by surprise, but at other times preserved a degree of consistency in his falsehood.

IV. Mr. Ruddall, an intimate acquaintance of Chatterton, declared to Mr. Croft, that he saw him (Chatterton) disguise several pieces of parchment with the appearances of age, and that Chatterton told him, that the parchment which Mr. Ruddall had assisted him in blacking and disguising, was the very parchment he had sent to the printer's containing "the account of the Fryers passing the old bridge [LL]."

(w) Monthly Review for March 1782.

V. The

[KK] *The same general information with which those compositions abound.* In the supplement to the works of Chatterton, (printed for Becket, 1784.) there is inserted a piece which has been already referred to, called Chatterton's will. This appears to have been written a few days before he left Bristol to go to London; when in consequence, as it should seem, of his being refused a small sum of money by a Gentleman, whom he had occasionally complimented in his poems, he had taken a resolution of destroying himself the next day. What prevented him from carrying this design at that time into execution does not appear; but the whole writing on this occasion is worth attention, as it throws much light on his real character, his acquaintance with old English writers, and his capability of understanding and imitating old French and Latin inscriptions, not indeed grammatically, but sufficiently to answer the purposes to which he often applied this knowledge. From this writing it also

appears that he would not allow King David to have been a holy man, from the strains of piety and devotion in his psalms, because a *great genius can effect any thing*; that is, *assume any character and mode of writing he pleases*. This is an answer from Chatterton himself, to one argument, and a very powerful one, in support of the authenticity of Rowley's poems. In that part of the will addressed to Mr. George Catcott, Chatterton mentions Rowley's poems, but in so guarded a manner, that it is not easy to draw any certain information for or against their authenticity; though the parties on both sides have attempted it. The address to Mr. Barrett does no less credit to his own feelings, than to that Gentleman's treatment of him; and the apology that follows to the two Mr. Catcotts, for some effusions of his satire upon them, is the best recompence he then had in his power to make to those Gentlemen, from whom he had experienced much civility and kindness. Q.

[LL] *The very parchment he had sent to the Printer's, containing "the account of the Fryers passing the old bridge."*

"TO GEORGE STEEVENS, Esq; Hampstead Heath,

"DEAR SIR,

"IT gives me pleasure that LOVE AND MADNESS, which I put together in a few idle hours, as much for the sake of doing justice to poor Chatterton as of blunting the edge of Hackman's shocking example, has so well answered the former purpose,

"——— Where'er (his bones at rest)
"His spryte to haunte delygheteth beste,"

Chatterton must be now not a little gratified when he looks down upon the squabbles he has raised on earth. Every syllable which I have made Hackman relate of him in LOVE AND MADNESS is, I firmly believe, religiously true. Walmisly was my tenant for the house in Shoreditch, where Chatterton lodged with him, at the time he gave me the information contained in my book. Chatterton's letters which I printed, and which are hardly less singular perhaps than Rowley's poems, are confessedly original.

"As I cannot spare time from my profession to enter any farther into this dispute, and as you inform me that Mr. Warton is going to publish something, I write this letter, according to your desire, in answer to your's of yesterday, respecting what long since I said to you of Mr. Ruddall; and it is perfectly at Mr. Warton's service. But I must desire he will print it exactly as I send it you. When I have spoken for myself, he may draw his own arguments from my communication.

"The left hand column is an extract from Dean Milles's quarto edition of Rowley's, i. e. of Chatterton's poems, p. 436, 7. The right hand column is my account of the same business. In some material circumstances he certainly errs. It were easy to shew, the Dean has condemned Chatterton, and robbed him of Rowley's poems upon slighter evidence of less material mistakes.

"That the Dean should have received *all* his information of this business from Mr. Ruddall, is certainly impossible, because some part of his account of it is certainly untrue. The passages in the Dean's account, on which I comment, are marked, that they may be printed in Italics,

"A singular circumstance relating to the history of this ceremony ("of passing the old bridge") has been communicated to the Publick within these two last years; and candour requires that it should not pass unnoticed here, especially as the character of the relator leaves no room for suspicion. The objectors to the authenticity of these poems may possibly triumph in the discovery of a fact, which contains, in their opinion,

The circumstance is singular, and I have always thought so; but it has never yet, I believe, been communicated to the Publick; though I certainly meant it should some time or other,

It

V. The Rev. Mr. Catcott, brother to the Mr. Catcott before mentioned, affirmed, that having had a conversation one evening with Chatterton, he traced the very substance of this

opinion, a decisive proof that Chatterton was the author of this paper, and (as they would infer) of all the poetry which he produced under Rowley's name; but, *when the circumstances are attentively examined*, the reader will probably find, that even this fact tends rather to establish, than to invalidate, the authenticity of the poems.

Mr. John Ruddall, a native and inhabitant of Bristol, and formerly apprentice to Mr. Francis Gresley, an Apothecary in that city, was well acquainted with Chatterton, whilst he was apprentice to Mr. Lambert. During that time, Chatterton frequently called upon him at his master's house, and, soon after he had printed *this account of the Bridge* in the Bristol paper, told Mr. Ruddall, that he was the author of it; but, it occurring to him afterwards, that he might be called upon to produce the original, he brought to him one day a piece of Parchment, about the size of a half Sheet of Fool's Cap paper. Mr. Ruddall does not think that any thing was written on it when produced by Chatterton, but he saw him write several Words, if not lines, in a Character which Mr. Ruddall did not understand, which he says was totally unlike English, and, as he apprehended, was meant by Chatterton, to imitate or represent the original from which this Account was printed. He cannot determine precisely how much Chatterton wrote in this manner, but says, that the time he spent in that Visit did not exceed three quarters of an hour. The Size of the Parchment, however, (even supposing it to have been filled with writing) will in some measure ascertain the quantity which it contained.

He says also, that when Chatterton had written on the Parchment, he held it over the Candle, to give it the appearance of antiquity, which changed the Colour of the Ink, and made the Parchment appear black and a little contracted: he never saw him make any similar attempt, nor was the Parchment produced afterwards by Chatterton to him, or (as far as he knows) to any other person. From a perfect knowledge of Chatterton's abilities, he thinks him to have been incapable of writing the *Battle of Hastings*, or any of those Poems produced by him under the name of Rowley, nor does he remember that Chatterton ever mentioned Rowley's Poems to him, either as original or the contrary; but sometimes (though very rarely) intimated that he was possessed of some valuable literary productions. Mr. Ruddall had promised Chatterton not to reveal this Secret, and he scrupulously kept his word till the year 1779; but, ON THE PROSPECT OF PROCURING A GRATUITY OF TEN POUNDS, FOR CHATTERTON'S MOTHER, FROM A GENTLEMAN WHO CAME TO BRISTOL IN ORDER TO COLLECT INFORMATION CONCERNING HER SON'S HISTORY, he thought so material a benefit to the Family would fully justify him for divulging a secret by which no person now living could be a sufferer."

"As this appeared to me the most decisive evidence, I asked Mr. Ruddall's leave to make use of his name about it, which he granted me; and I made a Memorandum of it, the same day, at the distance of a few hours. But it is still possible my Memory might deceive me. In matters more serious than the authenticity of Poems, which are certainly exquisite, whoever wrote them, it is not my way, I hope, to be more positive than I ought.

"Mr. Ruddall will excuse me if I say, that I cannot possibly allow him, or any one, to determine the authenticity of the Poems, by telling the Dean, or the world, that, *from a perfect knowledge of Chatterton's*

It is not clear to me, that the advocates for Chatterton have occasion to be apprehensive, if the circumstances should be attentively examined even according to the Dean's own shewing. But mine is somewhat different.

My visit to Bristol of a few days, in order to collect information concerning Chatterton, was on the 23d of July, 1778. At that time I gave something to the Mother and Sister for their voluntary communications to me. After I published *LOVE AND MADNESS*, I laid a larger plan for their benefit, which I hope still to see carried into execution; and I destined something more to the family of him whose genius I so much respected, though I well knew his family deemed me their enemy for endeavouring to prove him guilty of Forgery. Prevented from going to Bath, and consequently from giving what I had set apart for this purpose, with my own Hands, I gladly seized the liberty allowed me by a friend of Mr. Ruddall to beg this favour of him. On the 22d of March, 1781, I wrote to Mr. Ruddall, to whom I was then a perfect stranger, making use of his Friend's name, and enclosing a Draught to him or his order for ten pounds, requesting he would give the Money to Chatterton's Mother and Sister. On the 30th of the same Month, Mr. Ruddall called upon me in Lincoln's Inn; appeared, as I imagined, to lean to the side of this question which I have ever thought to be the right; and told me, of his own accord, what certainly agrees no more with the Dean's account, than what I have already related agrees with the Dean's saying that Mr. Ruddall told this, in 1779, on the prospect of procuring a gratuity of ten Pounds for Chatterton's Mother, from a Gentleman who came to Bristol in order to collect information concerning her Son's History.

If my Memory not only fails me now, but failed me the same day, and has failed me ever since, Mr. Ruddall will correct me. To him I appeal, and by him I must submit to be corrected. But, on the 30th of March, 1781, he told me, AS I THINK, that he assisted Chatterton in disguising SEVERAL pieces of Parchment with the appearances of Age, just before "the Account of passing the Bridge" appeared in Farley's Journal; that, after they had made several experiments, Chatterton said, "this will do, now I will black THE Parchment;" that, whether he told him at the time what THE Parchment was, he could not remember; that he believed he did not see Chatterton black THE Parchment, but that Chatterton told him, after "the Account of passing the Bridge" had appeared in the News-paper, that THE Parchment which he had blacked and disguised, after their experiments, was what he had sent to the Printer containing the ACCOUNT."

this conversation, in a piece which that indefatigable genius produced sometime after as Rowley's.

VI. Chatterton at first exhibited the Songe to Ella in his own hand-writing; and afterwards in the parchment, which he gave to Mr. Barrett as the original, there were found several variations, which it is supposed he had admitted through forgetfulness, or perhaps, as actual corrections, considering that the parchment was the copy which probably would

(x) Curfory Observations on Rowley's Poems, p. 44.

be resorted to as a standard (x).

VII. The hand-writing of the fragment containing the storie of W. Canynge, is quite different from the handwriting of that which contains "the accounte of W. Canynge's feast;" and neither of them is written in the usual record hand of the age to which they are attributed. Indeed, in the "accounte of W. Canynge's Feaste," the Arabian numerals, (63) are said to be perfectly modern, totally different from the figures used in the fifteenth century, and exactly such as Chatterton himself was accustomed to make (y).

(y) See Milles's Rowley, p. 429. Tyrwhitt's Vindication, p. 135. Monthly Review, by Badcock, for March 1782.

VIII. The very existence of any such person as ROWLEY is questioned, and upon apparently good ground. He is not so much as noticed by William of Worcestre, who lived nearly about the supposed time of Rowley, was himself of Bristol, and makes frequent mention of Canynge. "Bale, who lived two hundred years nearer to Rowley than we, and who, by unwearied industry, dug a thousand bad authors out of obscurity," has never taken the least notice of such a person (z); nor yet Leland, Pitts, or Tanner, nor indeed any other literary biographer. That no copies of any of his works should exist, but those deposited in Redcliffe church, is also an unaccountable circumstance not easy to be surmounted (a).

(z) Walpole's two letters, p. 31.

(a) Tyrwhitt's Vindication, p. 119. 121.

IX. Objections are even made to the manner in which the poems are said to have been preserved. That title deeds relating to the church or even historical records might be lodged in the muniment room of Redcliffe church, is allowed to be sufficiently probable; but that *poems* should have been consigned to a chest with six keys, kept in a private room in a church with title deeds and conveyances, and that these keys should be intrusted, not to the Heads of a College, or any Literary Society, but to Aldermen and Churchwardens, is a supposition replete with absurdity; and the improbability is increased, when we consider that these very papers passed through the hands of persons of some literature, of Chatterton's father in particular, who had a taste for poetry, and yet without the least discovery of their intrinsic value (b).

(q) See Monthly Review for March 1782.

Internal Evidence.

I. In point of STYLE, COMPOSITION, and SENTIMENT, it is urged by Mr. Warton, and those who adopt the same side of the controversy, that the poems of Rowley are infinitely superior to every other production of the century which is said to have produced them. Our ancient poets are minute and particular, they do not deal in abstraction and general exhibition, but dwell on realities; but the writer of these poems adopts ideal terms and artificial modes of explaining a fact, and employs too frequently the aid of metaphor and personification (c). Our ancient bards abound in unnatural conceptions, strange imaginations, and even the most ridiculous inconsistencies; but Rowley's Poems present us with no incongruous combinations, no mixture of manners, institutions, usages and characters: they contain no violent or gross improprieties (d). One of the striking characteristics of old English poetry, is a continued tenor of disparity. In Gower, Chaucer, and Lydgate, elegant descriptions, ornamental images, &c. bear no proportion to pages of languor, mediocrity, prosaic and uninteresting details; but the poems in question are uniformly supported, and are throughout poetical and animated (e). Poetry, like other sciences (say these critics) has its gradual accessions and advancements; and the poems in question possess all that elegance, firmness of contexture, strength and brilliancy, which did not appear in our poetry before the middle of the present century.

(c) Matthias's Essay on Evid., p. 64.

(d) Warton's Inquiry, p. 21.

(e) Ibid. p. 20. Monthly Review, May 1782.

II. There appears in these poems none of that LEARNING, which peculiarly marks all the compositions of the fifteenth century. Our old poets are perpetually confounding Gothic and classical allusions; Ovid and St. Austin are sometimes cited in the same line. A studious ecclesiastic of that period would give us a variety of useless authorities from Aristotle, from Boethius, and from the Fathers: and the whole would be interspersed with allusions to another kind of reading, viz. the old romances. The round table, with Sir

"ton's abilities, HE thinks him to have been incapable of writing the Battle of Hastings, or any of those Poems produced by him under the name of Rowley."

"It appears to me that I cannot possibly, all this time, have been noticing what does not relate to me, because Chatterton's Sister, when she thanks me in a Letter dated April the 20th, 1781, for what I sent her and her Mother, through Mr. Ruddall, says, that "the only benefits they have reaped from the labours of her dear Brother," are what they have received from me.

"Convey this to Mr. Warton, if you choose it, with many thanks for the pleasure I have received from his History of English Poetry; and believe me to be,

Lincoln's-Inn,
Feb. 5, 1782.

"Dear Sir,
"Your obliged friend,
"HERBERT CROFT, jun."

Launcelott,

Launcelott, and Sir Tristram, and Charlemagne, would have been constantly cited (f). Poems from such an author, would also have occasionally exhibited prolix devotional episodes, mingled with texts of Scripture, and addresses to the Saints and blessed Virgin; instead of apostrophes to such allegorical divinities as Truth and Content, and others of Pagan original (g).

(g) *Ibid.* 98.

As to the historical allusions which are really found in these poems, it is asserted, that they are only such as might be supplied by books which are easily obtained, such as Holinghead and Fox, Fuller's Church History, Geofrey of Monmouth, and others of a similar nature (h); and that general reading has been mistaken for profound erudition (i).

(h) Matthias's Essay, p. 69. An Examination of Rowley's Poems, p. 24.

(i) Warton's Inquiry.

III. Some ANACHRONISMS have also been pointed out in the manuscripts of Rowley. Thus the art of *knitting stockings* is alluded to in the Tragedy of Ella [MM]; whereas it is a well established fact, that the art was utterly unknown in the reign of Edward IV. Bristol is called a city, though it was not such till long after the death of that monarch. Canynge is said to have possessed a *cabinet* of coins, *drawings*, &c. though these words were not then in use; and *manuscripts* are spoken of as rarities, at a time when there were scarcely any other books: when, in truth, a printed book must have been a much greater curiosity (k).

(k) Curfory Observations on Rowley's Poems, p. 22—25.

IV. The METRE of the old English poetry is said to be totally different from that of Rowley. The stanza in which the majority of these poems are written, consists of ten lines, the two first quatrains of which rhyme alternately, and it closes with an alexandrine; no example of which occurs in Chaucer, Lydgate or Gower. Spencer extended the old octavo stanza to nine lines, closing with an alexandrine, to which Prior added a tenth (l). Above all, the extraordinary instance of an English Pindaric in the fifteenth century, is ridiculed by Mr. Warton, which novelty (he says) "was reserved for the capricious ambition of Cowley's muse." That Rowley should ever have seen the original model of this irregular style of composition, is utterly improbable, since Pindar was one of the last classics that emerged at the restoration of literature (m).

(l) Matthias's Essay, p. 66.

To this head may be referred the extraordinary *smoothness of the verse*, which is utterly unparalleled in any Poet for more than a century after the supposed age of Rowley (n); the accent or cadence, which is always modern; and the perfection and harmony of the rhyme (o).

(m) Warton's Inquiry, p. 33, 39.
(n) Curfory Observations, p. 5.

(o) Matthias's Essay, p. 67.

V. While the composition, metre, &c. are wholly modern, the LANGUAGE is asserted to be too ancient for the date of the poems. It is not the language of any particular period, but of two entire centuries (p). The diction and versification are at perpetual variance (q). The author appears to have borrowed all his ancient language, not from the usage of common life, but from Speght, Skinner, and other lexicographers, and to have copied their mistakes (r). He has even introduced words which never made a part of the English language, and which are evidently the coinage of fancy, analogy, or mistake (s).

(p) Curfory Observations, p. 32.
(q) Warton's Inquiry, p. 42.
(r) Matthias's Essay, p. 68.
(s) Tyrwhitt's Appendix to Rowley's Poems, and Vindication passim.

(s) *Ibid.*

VI. Notwithstanding this affectation of ancient language, it is added, that the tinsel of MODERN PHRASEOLOGY may in too many instances be detected. Thus such phrases as "*Puerilitie; before his optics; blameless tongue; the authoure of the piece; vessel wreckt upon the tragic land; the proto-sleyne man*," &c. could not be the language of the fifteenth century. We find also a number of modern formularies and combinations, e. g. "*Systers in sorrow; poygnant arrowes typp'd with destinie; Oh, Goddes! Now by the Goddes; Ah, what avaulde; Awaie, awaie! (which is the cant of modern tragedy) Oh, thou, whate'er thie name;*" with a number of compound epithets (t), and other almost certain marks of modern composition (u).

(t) Warton's Inquiry, p. 23, 24.
(u) Curfory Observations, p. 12, 43.

VIII. To these may be added some passages which appear to be imitations of modern poets. Many of those, which have been cited to convict Chatterton of plagiarism, are, it must be confessed, such obvious thoughts, that they might be adopted by a person who had never seen the modern publications in which they appear; but such coincidences as the following are palpable:

[MM] *Alluded to in the Tragedy of Ella.*

As Elynour bie the green leffle was syttyng,
As from the fones hete she harried,
She sayde, as herr whytte hondes whyte hosen was
knyttyng,

Whatte pleasure ytt ys to be married!

Mie husbunde, Lorde Thomas, a forrester boulde,
As ever clove pynne, or the baskette,
Does no cherysauncys from Elynour houlde,
I have ytte as soone as I aske ytte.

Whann I lyved wyth mie fadre yn merrie Clowd-dell,
Tho' twas at my liefse to mynde spynnyng,
I styll wanted somethyng, botte whatte ne coulde
telle,

Mie lorde fadres barble haulte han ne wynnynge.

Eche monyng I ryse, doe I sette mie maydennes,
Somme to spynn, somme to curdell, somme
bleachyng,
Gyff any new entered doe aske for mie aidens,
Thann swythynne you fynde mee a teachyng.

Lorde Walterre, mie fadre, he loved me welle,
And nothyng unto mee was nedeyng,
Botte schulde I agen goe to merrie Clowd-dell,
In sothen twoulde bee wythoute redeyng.

Shee sayde, and lorde Thomas came over the lea,
As hee the fatte derkynnes wae chacyng,
Shee putte uppe her knyttyng, and to hym wente
shee;
So wee leave hem bothe kyndelie embra-yng.

The advocates of Rowley, are, however, not destitute of arguments in their support. I shall therefore divide the evidence in the same manner as in stating the former, and endeavour to exhibit as fair a summary as possible.

ARGUMENTS TO PROVE THAT THE POEMS ATTRIBUTED TO ROWLEY, WERE REALLY WRITTEN BY HIM AND OTHERS IN THE 15TH CENTURY.

External Evidence.

1. The first grand argument which the advocates on this side advance, is the constant and uniform assertion (except in a single instance) of Chatterton himself, who is represented by his sister, and all his intimates, as a lover of truth from the earliest dawn of reason. He was also most insatiable of fame, and abounded in vanity. He felt himself neglected, and many passages of his writings are full of invective on this subject. Is it probable, that such a person should barter the fair character of truth, which he loved, for the sake of persisting in falsehood, which he detested? Is it probable, that a person of his consummate vanity, should uniformly give the honour of all his more excellent compositions to another, and only inscribe his name to those which were evidently inferior? But even though a man might be thus careless of his reputation during his life time, under the conviction that he might assume the honour whenever he pleased, would this carelessness continue even at the hour of death? Would he at a moment, when he actually meditated his own destruction; in a paper which he inscribes—"All this wrote between eleven and two o'clock Saturday (Evening), in the utmost distress of mind,"—still repeat with the utmost solemnity the same false assertion that he had affirmed during the former part of his life? There was at least *no occasion* to introduce the subject at that time, and he might have been silent, if he did not chuse to close his existence with a direct falsehood (y). If we consider the joy which he manifested on the discovery of the parchments, the avidity with which he read them, he must be the most complete of dissemblers, if really they contained no such treasure as he pretended. To another very extraordinary circumstance

(y) See Chatterton's Will, Appendix to Miscellanies. See also the learned Mr. Bryant's Observations, p. 499. 547.

(w) See Monthly Review.

(x) See a letter prefixed to Chatterton's Miscellany, p. 24.

circumstance Mr. Catcott has pledged himself, which is, that on his first acquaintance with Chatterton, the latter mentioned by *name* almost all the poems which have since appeared in print, and that at a time, when, if he were the author, one-tenth of them could not be written (x).

(x) *Ibid.* 548.

II. Next to the asseverations of Chatterton himself, we are bound to pay at least some attention to those of all his friends. His mother accurately remembers the whole transaction concerning the parchments, as I have already stated it. His sister also recollects to have seen the original parchment of the poem on our Lady's Church, and, she thinks, of the Battle of Hastings: she remembers to have heard her brother mention frequently the names of Turgot, and of John Stowe, besides that of Rowley. (a) Mr. Smith, who was one of the most intimate friends of Chatterton, remembers to have seen manuscripts upon vellum, to the number of a dozen in his possession, many of them ornamented with the heads of kings or of popes, and some of them as broad as the bottom of a large sized chair (b). He used frequently to read to Mr. Smith, sometimes parts, and sometimes whole treatises from these old manuscripts; and Mr. Smith has very often been present while he transcribed them at Mr. Lambert's (c). Mr. Capel, a Jeweller, at Bristol, assured Mr. Bryant, that he had frequently called upon Chatterton, while at Mr. Lambert's, and had at times found him transcribing ancient manuscripts answering to the former description (d). Mr. Thistlethwaite, in the curious letter already quoted, relates, that during the year 1768, "at divers visits, he found Chatterton employed in copying Rowley from what he still considers as undoubted originals (e)." Mr. Carey also, another intimate acquaintance, frequently heard Chatterton mention these manuscripts soon after he left Colston's school. Every one of these Gentlemen, as well as Mr. Clayfield and Mr. Ruddall, declare unequivocally, from an intimate knowledge of Chatterton's learning and abilities, that they believe him incapable of producing the poems of Rowley.

(b) Bryant's Observations, p. 528.

(d) *Ibid.* p. 523.

(a) Milles's Prelim. Dissertation, p. 8.

(c) *Ibid.*

(e) Milles's Rowley, p. 457.

III. That a number of manuscripts were found in Redcliffe church, cannot possibly be doubted after the variety of evidence which has been produced to that purpose. Perrot, the old Sexton, who succeeded Chatterton's great uncle, took Mr. Shiercliffe, a Miniature Painter, of Bristol, as early as the year 1749, through Redcliffe church; he shewed him in the North porch a number of parchments, some loose and some tied up, and intimated, "that there were things there, which would one day be better known; and that in proper hands, they might prove a treasure (f)." Many of the manuscripts in Mr. Barrett's hands bear all the marks of age, and are "signed by Rowley himself. The characters in each instance appear to be similar; and the hand-writing the same in all [NN]."

(f) Bryant's Observ. p. 513.

IV. The short time which Chatterton had to produce all these poems, is an extraordinary circumstance. It has been already stated, that he continued at Colston's school from the age of eight till that of fourteen and seven months: that he continued each day in school from seven or eight o'clock till twelve in the morning, and from one till four or five in the evening, and went to bed at eight. There is also reason to believe, that he did not discover or begin to copy these poems, or even to apply himself to antiquities, before the age of fifteen. In about the space therefore of two years and a half, he made himself master of the ancient language of this country; he produced more than two volumes of poetry, which are published, and about as many compositions, in prose and verse, as would nearly fill two volumes more. During this time he must have read a considerable variety of books. He was studying medicine, heraldry, and other sciences; he was practicing drawing; he copied a large book of precedents; and Mr. Lambert's business, though not extensive, must have occupied at least some part of his attention. Which, therefore, is the easier supposition, say the advocates for Rowley, that this almost miracle of industry or ability was performed by a boy; or that Chatterton really copied the poems from ancient documents [OO]?

V. Chatterton

[NN] *And the hand writing the same in all.* Mr. Barrett, and he only, has it in his power finally to determine the controversy concerning Rowley's Poems. Let him produce all the manuscripts which he obtained from Chatterton, and let them be put into the hands of some persons conversant in old writings, who may possibly be able to decide concerning the probable date of the hand-writing.

(r) Bryant's Observ. p. 548.

[OO] *Or that Chatterton really copied the Poems from ancient documents.* Of these old writings, which he is supposed to have transcribed from obscure and almost illegible manuscripts, (exclusive of his miscellaneous and political writings,) the poetical alone fills 288 octavo pages in Mr. Tyrwhitt's edition; and perhaps there are others, with a quantity of prose writings which might fill another such volume. See Milles's edition, p. 438.

These must have been transcribed by him, either in Mr. Lambert's office, or during the few hours he

spent at home with his mother in an evening. Neither Mr. Lambert, nor his mother or sister, take upon them to say, that they ever saw him thus employed. When not engaged in the immediate business of his profession, he was employed by his master to copy forms and precedents, as well to improve him in the law as to keep him employed. Of these law forms and precedents, Mr. Lambert has in his possession a folio book containing 334 pages, closely written by Chatterton; also 36 pages in another. In the noting book, 36 notarial acts; and in the letter book, 38 letters copied.

Add to all this his *own* acknowledged compositions, filling 240 pages in the printed copy, and perhaps as many more in manuscript not yet published.

The greatest part of these compositions, both under Rowley's name and his own, was written before he went to London, in April 1770, he being then aged

(g) Remarks on
Watson, p. 9.

(b) Bryant's Obs.
p. 477.

V. Chatterton is said farther to have discovered great marks of ignorance on the manuscripts coming first into his possession. He read the name *Roulie* instead of Rowley, till he was set right by Mr. Barrett (g). In the acknowledged writings of Chatterton, there are also palpable mistakes, and marks of ignorance in history, geography, &c. whereas no such appear in the poems of Rowley (b). But what is of still greater consequence, Mr. Bryant has laboured to prove, that in almost innumerable instances, Chatterton did not understand the language of Rowley, but that he has actually misinterpreted, and sometimes mistranscribed him. Thus in "the English metamorphosis," ver. 14.

"Their myghte is *knopped* ynnne the froste of fere." Chatterton having recourse to Chaucer and Skinner, has interpreted to *knop*, to *tie*, or *fasten*; whereas it really means, and the context requires that it should mean, to *nip*. Thus in the Second Battle of Hastings, 548, describing a sacrifice:

"Roastyng their *vyſualle* round about the flame;"

which Mr. Tyrwhitt himself has allowed ought to be *vyſtimes*, and has accordingly cancelled the other word. Thus in *Ella*, v. 678, we find:

"Theyre throngyng corſes ſhall *onlyghte* the ſtarres."

The word *onlyghte*, Chatterton has here strangely applied as meaning to *darken* the stars, whereas Mr. Bryant, by recurring to the Saxon, very reasonably supposes *onlych* to have been the proper word, and the line will then mean to *be like*, or to *equal* the stars in number. The word *cherifaunei*, which Chatterton has inserted in the "Introductionne to *Ella*," never did really exist, and Mr. Bryant shews that the original word was certainly *cherifaunce*: and in the Second Eclogue, Chatterton has explained the word *amenuſed*, by *lessened*, or *diminished*; whereas the same able critic shews, that it never had any such meaning, but that it really signifies *accursed* or *abominable*. These and other similar mistakes (of which Mr. Bryant specifies a great number) he asserts, could never have happened, had Chatterton been any more than the mere transcriber of these extraordinary poems (*).

(*) See Mr.
Bryant's Obser-
vations, passim.

VI. With respect to the objection, that Rowley is not mentioned by other writers, it is answered, that there existed so little communication among mankind at that time, that Leland, who is a very curious writer, never makes the smallest mention of Canynge, Lydgate, or Occleve: That William of Worcestre, does not mention Rowley, because, unless history demands it, writers do not commonly commemorate persons before their death, and Rowley was apparently alive when William of Worcestre was at Bristol. In the register of the Diocese of Wells, however, there are two persons of the name of Thomas Rowley, mentioned as admitted into Holy Orders, one of whom might be the author of the poems (i). In answer to the objection, why these manuscripts remained so long unknown to the world, Mr. Bryant says, "We may not be able to account any more for these manuscripts being so long neglected, than for those of Hesychius, Phædrus, and Velleius Paterculus having been in the same situation (k):" and with respect to the secret-

(i) Mr. Bryant's
Obs. p. 535-543.
544.

(k) *Ibid.* p. 499.

VII. The concessions of the adversaries ought not to pass unnoticed on this occasion. Mr. Warton admits, "that some poems written by Rowley might have been preserved in Canynge's chest; but if there were any, they were so enlarged and improved by Chatterton, as to become entirely new compositions (l);" and in a subsequent publication, he says, "I will not deny that Chatterton might discover parchments of humble prose, containing local memoirs and authentic deeds, illustrating the history of Bristol. He might have discovered biographical diaries, or other notices of the lives of Canynge, Ischam, and Gorges." These concessions at least imply something of a doubt on the mind of the Laureat, concerning the existence of some important manuscripts, and seem of some consideration in the scale of controversy.

(l) History of
English Poetry.

aged 17 years and five months; and of the former, Rowley's pieces, they were almost all exhibited a twelve month earlier, before April 1769. Now the time taken up in preparing the parchment and imitating the old writing, must probably have been greater than the time spent in composing them. If he was in possession of the originals, surely he would not have bestowed all this time and pains in transcribing from originals, which he might have parted with to greater advantage; and if he did transcribe them, why destroy the greatest part of them, and exhibit only scraps and detached lines, for such only appear now to exist? O.

Inter-

Internal Evidence in favour of the authenticity of Rowley's Poems.

I. The internal evidence (which we may call positive) on this side of the question is not very extensive, and the bulk of it consists in negative arguments, or a refutation of the adversaries' objections. The most material proof is derived from the ALLUSIONS TO FACTS and CUSTOMS, of which there is not much probability, that Chatterton could have a competent knowledge. Thus, if the "Dethe of Sir Charles Bawdin" be supposed, as Mr. Tyrwhitt himself thinks probable, to refer to the execution of Sir Baldwin of Fulford, the fact meets confirmation in all its circumstances, from a fragment published by Hearne, and also from a parliamentary roll of the eighth of Edward IV. neither of which there is the least probability that Chatterton ever saw (m). Thus the names which occur in the Battle of Hastings, may almost all be authenticated from the old historians; but they are scattered in such a variety of books, that they could not be extracted without infinite labour, and several of the books were in all probability not accessible by Chatterton.

(m) Observations on Rowley's Poems, p. 14.

To this head we may refer many particulars concerning Canynge, &c. as related by Chatterton; such as his paying 3000 marks to the king, *pro pace sua habenda*, &c. which are confirmed in an extraordinary manner by W. of Worcestre, whose book was not made public till 1778, and which it was therefore impossible Chatterton could see previously to the publication of his memoirs. Such is also the time of Canynge's entering into Holy Orders, which is confirmed by the Episcopal register of Worcester; and the anecdote of the steeple of Redcliffe church being burnt down by lightning in 1446. Of a similar kind is a circumstance in the orthography of the name *Fescampe*, (which is the right orthography,) while Holingshead, the only author accessible to Chatterton, has it *Flischampe*. The name of Robert Consul also, whom Rowley represents as having repaired the castle of Bristol, occurs in Leland, as the proprietor of that Castle (n).

(n) See Bryant's Observ. p. 314, 326, 343, &c.

II. With regard to the STYLE, COMPOSITION, and SENTIMENT. If the poems appear superior to the efforts of the first scholars at the revival of letters; what are they, when considered as the productions of an uneducated charity boy, not quite seventeen? Those also who think that Chatterton could not reduce his genius to the standard of the age of Rowley, should, perhaps, rather wonder why he could never raise his own avowed productions to an equal degree of excellence [PP]. The poems attributed to Rowley, if his, are as much the work of his infantine years, as his own miscellaneous poems: indeed, many of the latter were composed some time after most of Rowley's were exhibited to the world. That they should be inferior in every excellence of poetry, is therefore a mystery not easy to be accounted for. Against the general proposition, that poetry like other arts is progressive, and never arrived to perfection in an early age; it has been judiciously urged, that "Genius is peculiar neither to age nor country," but that we have an example of one man (Homer,) who in the very infancy of all arts, without guide or precursor, "gave to the world a work, which has been the admiration and model of all succeeding poets (o)." And though it be admitted, that Rowley's poems are pervaded by an uniform strain of excellence and taste, which does not appear in the other works of his age now extant, yet when we compare any composition with another of the same or of any prior age, the difference subsisting, will frequently be found not to depend upon time, but upon the situation, genius and judgment of the respective authors (p).

(o) Matthias's Essay, p. 98.

(p) Ibid. p. 72.

III. As to METRE, it is said, that in all languages the modes and measures of verse were originally invented and adopted from accidental circumstances, and agreeably to the taste of different authors; and that very early in the English poetry, a great variety of measures are known to have prevailed. Such is the octave stanza, which is not many removes from the usual stanza of Rowley, the seven lined stanza, or Rithm Royal, and that of ten lines used by Chaucer in one of his smaller poems. The argument founded on the smoothness of the verse, is attempted to be overturned by Mr. Bryant, who has produced extracts from poems still older than the age of Rowley, which are deficient neither in harmony nor cadence (q).

(q) Observations, p. 425, &c. 552.

IV. The objection founded on the ancient LANGUAGE of Rowley, is answered by supposing that his language was probably provincial (r). Several of the words objected to as of Chatterton's coining, have by more profound researches been traced in ancient writers. Many words in Rowley's poems cannot be found in those Dictionaries and Glossaries, to which Chatterton had access (s); and Chatterton's mistakes in transcribing and explaining the old language of Rowley, have already been instanced.

(r) Ibid. p. 1, to 25.

(s) Matthias's Essay, p. 77.

V. Many of the pretended IMITATIONS of THE MODERN poets to be found in Rowley, are objected to upon good grounds, as being ideas obvious to Rowley or any man; and as to the others, why may we not suppose them, "insertions of Chatterton, either to please his own ear, or to restore some parts which were lost, or in places where the

[PP] To an equal degree of excellence.] The most essential difference that strikes me between the Poems of Rowley and Chatterton is, that the former are always built upon some consistent interesting plot, and are more uniformly excellent in the execution; the latter are irregular sallies upon ill-selected or trifling subjects.

(t) *Ibid.* p. 105. words were difficult to be decyphered (t)?" This argument acquires great weight, when the temper and genius of Chatterton is considered, and when it is recollected that all parties agree in the probability of many interpolations being made by him; and if this argument be admitted, it will in a great measure account for the modern phraseology which so frequently occurs in these poems.

In rejoinder to these arguments, a few facts have been stated by those who support the title of Chatterton. 1st. That no writings or chest deposited in Redcliffe church are mentioned in Mr. Canynge's will, which has been carefully inspected, nor any books except two, called "Liggers cum integra legenda," which he leaves to be used occasionally in the choir by the two Chaplains established by him (u). 2d. To account for Chatterton's extensive acquaintance with old books out of the common line of reading, it is alledged that the old library at Bristol was, during his life time, of universal access, and Chatterton was actually introduced to it by the Rev. Mr. Catcott (w). 3d. Chatterton's account of Canynge, &c. as far as it is countenanced by William of Worcestre, (that is, as far as respects his taking orders and paying a fine to the King) may be found in the epitaph on Master Canynge, still remaining to be read by every person, both in Latin and English, in Redcliffe church, which indeed appears to be the authority, that William of Worcestre himself has followed. Chatterton's account also of Redcliffe steeple, is to be found at the bottom of a print of that church, published in 1746, by one John Halfpenny, "in which was recounted the ruin of the steeple in 1446, by a tempest and fire (x)." 4th. As to the old vellum or parchment on which Chatterton transcribed his fragments, it is observed, that "at the bottom of each sheet of old deeds, (of which there were many in the Bristol chest) there is usually a blank space of about four or five inches in breadth;" and this exactly agrees with the shape and size of the largest fragment which he has exhibited, viz. Eight and a half inches long, and four and a-half broad (y).

Vindication,
p. 113. 212.

(u) Tywrhitt's
Vindication,
p. 117.

(w) Warton's
Inquiry, p. 111.

(y) Curfory
Observations,
p. 29.

Thus I have exhibited, as faithfully as I was able, an abstract of the arguments on both sides of this curious literary question. To the examination I sat down with a sceptical mind; nor can I recollect being influenced during the progress of the inquiry in a single instance, by the authority of names, by the force of ridicule, or the partialities of friendship. Some remarks, I believe, I may have added, which are not to be found in other books. In this, however, I am not conscious of having favoured one party more than the other, but esteemed it a part of my duty to state the observations as they rose in my mind from a consideration of the facts. I shall not intrude upon my readers any verdict of my own concerning the issue of the controversy; since my only intention was to enable them, from a view of the arguments, to form their own conclusions; leaving them still open to the impression of any additional or more satisfactory evidence that may hereafter arise. I cannot, however, lay aside my pen without one general reflection. It is impossible to peruse the state of this controversy, without smiling at the folly and vanity of posthumous fame. The author of these poems, whoever he was, certainly never flattered himself with the expectation that they would ever excite half the curiosity, or half the admiration which they have excited in the literary world. If they really be the productions of Rowley, one of the first, both in order and in merit of our English Poets, is defrauded of more than half his reputation: if they be the works of Chatterton, they neither served to raise him in the opinion of his intimate acquaintance and friends, nor to procure for him the comforts or even the necessities of life. He has descended to his grave with a dubious character; and the only praise which can be accorded him by the warmest of his admirers, is that of an elegant and ingenious impostor. For the satisfaction of those readers, who may wish to review the whole controversy at large, and for the information of posterity, I subjoin the most accurate list I have been able to procure of all the publications which have appeared on both sides [22].

G.
Chatterton's

[22] *Of the publications which have appeared on both sides.*

A List of the various Publications upon the Subject of ROWLEY'S POEMS, for and against their Authenticity.

EDITIONS OF ROWLEY.

POEMS, supposed to have been written at Bristol by Thomas Rowley, and others, in the Fifteenth Century; the greatest Part now first published from the most authentic Copies, with an engraved Specimen of one of the MS. To which are added, a Preface, an Introductory Account of the several Pieces, and a Glossary. Ed. 8vo. 1777.

N. B. This Edition has been reprinted.

Ditto: with a Commentary, in which the Antiquity of them is considered and defended, by Jeremiah Milles, D. D. Dean of Exeter. Ed. 4to. 1782.

THE EIGHTH Section of Mr. Warton's Second Volume of the History of English Poetry, with the Notes to it.

REMARKS on the Eighth Section of Mr. Warton's Second Volume of the History of English Poetry.

Payne, Mews-Gate.

Two Letters by the Hon. Mr. Horace Walpole; printed at Strawberry-hill.—Reprinted, (by his permission) in the Gentleman's Magazines for April, May, June, July, 1782.

APPENDIX, containing some Observations upon the Language of the Poems attributed to Rowley, tending to prove, that they were written not by any ancient Author, but entirely by Thomas Chatterton.

Payne, Mews-Gate.

N. B. This Appendix is now generally annexed to the 8vo. Edition of Rowley's Poems.

OBSER-

Chatterton's Letters, so often referred to in the course of this article, are inserted below [RR].

OBSERVATIONS on the Poems attributed to Rowley, tending to prove, that they were really written by Him and other Ancient Authors. To which are added, Remarks on the Appendix of the Editor (of the 8vo. Ed.) of Rowley's Poems.

Bathurst, Fleet-Street.

OBSERVATIONS upon the Poems of Thomas Rowley; in which the Authenticity of those Poems is ascertained. By Jacob Bryant, Esq.

Payne, Mews Gate, &c.

CURSORY Observations on the Poems attributed to Thomas Rowley, a Priest in the fifteenth Century: with some Remarks on the Commentaries on these Poems, by the Reverend Dr. Jeremiah Milles, Dean of Exeter, and Jacob Bryant, Esq.

Nichols and Walter, Charing-Cross.

AN ENQUIRY into the Authenticity of the Poems attributed to Thomas Rowley, in which the Arguments of the Dean of Exeter and Mr. Bryant are examined. By Thomas Warton, Fellow of Trinity College, Oxford, and F. S. A.

Doddsley, Pall-Mall.

STRICTURES upon a Pamphlet entitled, "Curfory Observations on the Poems attributed to Rowley, a Priest in the Fifteenth Century." With a Postscript on Mr. Thomas Warton's Enquiry into the same Subject. By E. B. Greene, Esq.

Stockdale, Piccadilly.

A VINDICATION of the APPENDIX to the Poems called Rowley's; In Reply to the Answers of the Dean of Exeter, Jacob Bryant, Esq; and a third anonymous Writer; with some further observations upon those Poems, and an Examination of the Evidence which has been produced in Support of their Authenticity. By Thomas Tyrwhitt.

Payne, Mews Gate.

AN ESSAY on the Evidence, External and Internal, relating to the Poems attributed to Thomas Rowley and others, in the Fifteenth Century, containing a general View of the whole Controversy. By Thomas James Mathias.

Becket, Pall-Mall.

To which may be added various shorter Compositions on the Subject (too numerous to specify) inserted in the different monthly Magazines.

[RR] Are inserted below.]

LETTER I.

London, April 26, 1770.

Dear Mother,

HERE I am, safe, and in high spirits—To give you a journal of my tour would not be unnecessary. After riding in the basket to Brislington, I mounted the top of the coach, and rid easy, and agreeably entertained with the conversation of a Quaker in dress, but little so in personals and behaviour. This laughing friend, who is a Carver, lamented his having sent his tools to Worcester, as otherwise he would have accompanied me to London. I left him at Bath; when, finding it rained pretty fast, I entered an inside passenger to Speenhamland, the half-way stage, paying seven shillings. 'Twas lucky I did so, for it snowed all night, and on Marlborough Downs the snow was near a foot high.

At seven in the morning I breakfasted at Speenhamland, and then mounted the coach-box for the remainder of the day, which was a remarkable fine one.—Honest gee-ho complimented me with assuring me, that I sat bolder and tighter than any person who ever rid with him.—Dined at Stroud most luxuriantly, with a young Gentleman who had slept all the preceding night in the machine; and an old mercantile genius, whose school-boy son had a great deal of wit, as the father thought, in remarking that Windfor was as old as our Saviour's time.

Got into London about five o'clock in the evening—called upon Mr. Edmunds, Mr. Fell, Mr. Hamilton, and Mr. Doddsley. Great encouragement from them; all approved of my design;—shall soon be settled.—Call upon Mr. Lambert; shew him this, or tell him, if I deserve a recommendation, he would oblige me to give me one—if I do not, it will be beneath him to take notice of me. Seen all aunts, cousins—all well—and I am welcome. Mr. T. Wenley is alive, and coming home.—Sister, grandmother, &c. &c. &c. remember.—I remain,

Your dutiful son,

T. Chatterton.

LETTER II.

Shoreditch, London, May 6, 1770.

Dear Mother,

I am surprised that no letter has been sent in answer to my last. I am settled, and in such a settlement as I would desire. I get four guineas a month by one Magazine: shall engage to write a History of England, and other pieces, which will more than double that sum. Occasional essays for the daily papers would more than support me. What a glorious prospect! Mr. Wilkes knew me by my writings since I first corresponded with the Booksellers here. I shall visit him next week, and by his interest will insure Mrs. Ballance the Trinity-House. He affirmed that what Mr. Fell had of mine could not be the writings of a youth; and expressed a desire to know the author. By the means of another Bookseller I shall be introduced to Townshend and Sawbridge. I am quite familiar at the Chapter Coffee-house, and know all the geniuses there. A character is now unnecessary; an author carries his character in his pen. My sister will improve herself in drawing. My grandmother is, I hope, well. Bristol's mercenary walls were never destined to hold me—there, I was out of my element; now, I am in it—London! Good God! how superior is London to that despicable place Bristol!—Here is none of your little meanesses, none of your mercenary securities, which disgrace that miserable hamlet.—Dress, which is in Bristol an eternal fund of scandal, is here only introduced as a subject of praise; if a man dresses well, he has taste; if careless, he has his own reasons for so doing, and is prudent. Need I remind you of the contrast? The poverty of authors is a common observation, but not always a true one. No author can be poor who understands the arts of Booksellers—Without this necessary knowledge, the greatest genius may starve; and, with it, the greatest dunce live in splendor. This knowledge I have pretty well dipped into.—The Levant man of war, in which T. Wenley went out, is at Portsmouth; but no news from him yet.—I lodge in one of Mr. Walmley's best rooms. Let Mr. Cary copy the letters on the other side, and give them to the persons for whom they are designed, if not too much labour for him.

I remain, yours, &c.

T. Chatterton.

P. S. I have some trifling presents for my mother, sister Thorne, &c.

Sunday morning.

For Mr. T. CARY.

I have sent you a task. I hope no unpleasing one. Tell all your acquaintance for the future to read the Freeholder's Magazine. When you have any thing for publication, send it to me, and it shall most certainly appear in some periodical compilation. Your last piece was, by the ignorance of a corrector, jumbled under the considerations in the acknowledgements. But I rescued it, and insisted on its appearance.

Your friend,

T. C.

Direct for me, to be left at the Chapter Coffee-house, Pater-noster-row.

Mr.

Mr. HENRY KATOR.

If you have not forgot Lady Betty, any Complaint, Rebus, or Enigma, on the dear charmer, directed for me, to be left at the Chapter Coffee-house, Pater-noster-row—shall find a place in some Magazine, or other; as I am engaged in many.

Your friend,

T. Chatterton.

Mr. WILLIAM SMITH.

When you have any poetry for publication, send it to me, to be left at the Chapter Coffee-house, Pater-noster-row, and it shall most certainly appear.

Your friend,

T. C.

Mrs. BAKER.

The sooner I see you the better—send me as soon as possible Rymdyk's address. (Mr. Cary will leave this at Mr. Flower's, Small-street.)

Mr. MASON.

Give me a short prose description of the situation of Nash—and the poetic addition shall appear in some Magazine. Send me also whatever you would have published, and direct for me, to be left at the Chapter Coffee-house, Pater-noster-row.

Your friend,

T. Chatterton.

Mr. MAT. MEASE.

Begging Mr. Mease's pardon for making public use of his name lately—I hope he will remember me, and tell all his acquaintance to read the Freeholder's Magazine for the future.

T. Chatterton.

T E L L—

Mr. Thaire	Mr. Rudhall	Mr. Ward
Mr. Gaster	Mr. Thomas	Mr. Kalo
Mr. A. Broughton	Mr. Carty	Mr. Smith
Mr. J. Broughton	Mr. Hanmor	&c. &c.
Mr. Williams	Mr. Vaughan	

to read the Freeholder's Magazine.

L E T T E R III.

King's Bench, for the present, May 14, 1770.

Dear Madam,

Don't be surprized at the name of the place. I am not here as a prisoner. Matters go on swimmingly: Mr. Fell having offended certain persons, they have set his creditors upon him, and he is safe in the King's Bench. I have been bettered by this accident: His successors in the Freeholder's Magazine, knowing nothing of the matter, will be glad to engage me, on my own terms. Mr. Edmunds has been tried before the House of Lords, sentenced to pay a fine, and thrown into Newgate. His misfortunes will be to me of no little service. Last week, being in the pit of Drury Lane Theatre, I contracted an immediate acquaintance (which you know is no hard task to me) with a young Gentleman in Cheap-side; partner in a music-shop, the greatest in the city. Hearing I could write, he desired me to write a few songs for him: this I did the same night, and conveyed them to him the next morning. These he shewed to a Doctor in Music, and I am invited to treat with this Doctor, on the footing of a composer, for Ranelagh and the Gardens. *Bravo, bey boys, up we go!*—Besides the advantage of visiting these expensive and polite places gratis; my vanity will be fed with the sight of my name in copper-plate, and my sister will receive a bundle of printed songs, the words by her brother. These are not all my acquisitions: a Gentleman who knows me at the Chapter, as an author, would have introduced me as a companion to the young Duke of Northumberland, in his intended general tour. But, alas! I speak no

tongue but my own!—But to return once more to a place I am sickened to write of, Bristol. Though, as an apprentice, none had greater liberties, yet the thoughts of servitude killed me: now I have that for my labour, I always reckoned the first of my pleasures, and have still, my liberty. As to the clearance, I am ever ready to give it; but really I understand so little of the law, that I believe Mr. Lambert must draw it. Mrs. L. brought what you mention. Mrs. Hughes is as well as age will permit her to be, and my cousin does very well.

I will get some patterns worth your acceptance; and wish you and my sister would improve yourselves in drawing, as it is here a valuable and never-failing acquisition.—My box shall be attended to; I hope my books are in it—if not, send them; and particularly Catcott's Hutchinsonian jargon on the Deluge, and the MS. Glossary, composed of one small book, annexed to a larger.—My sister will remember me to Miss Sandford. I have not quite forgot her; though there are so many pretty milleners, &c. that I have almost forgot myself.—Carty will think on me: upon inquiry, I find his trade dwindled into nothing here. A man may very nobly starve by it; but he must have luck indeed, who can live by it.—Miss Rumsey, if she comes to London, would do well, as an old acquaintance, to send me her address.—London is not Bristol—We may patrol the town for a day, without raising one whisper, or nod of scandal.—If she refuses, the curse of all antiquated virgins light on her: may she be refused, when she shall request! Miss Rumsey will tell Miss Baker, and Miss Baker will tell Miss Porter, that Miss Porter's favoured humble servant, though but a young man, is a very old lover; and in the eight-and-fiftieth year of his age: but that, as Lappet says, is the flower of a man's days; and when a Lady can't get a young husband, she must put up with an old bed-fellow. I left Miss Singer, I am sorry to say it, in a very bad way; that is, in a way to be married.—But mum—Ask Miss Suky Webb the rest; if she knows, she'll tell ye.—I beg her pardon for revealing the secret; but when the knot is fastened, she shall know how I came by it.—Miss Thatcher may depend upon it, that, if I am not in love with her, I am in love with nobody else: I hope she is well; and if that whining, sighing, dying pulpit-fop, Lewis, has not finished his languishing lectures, I hope she will see her amorous next Sunday.—If Miss Love has no objection to having a crambo song on her name published, it shall be done.—Begging pardon of Miss Cotton for whatever has happened to offend her, I can assure her it has happened without my consent. I did not give her this assurance when in Bristol, lest it should seem like an attempt to avoid the anger of her furious brother. Inquire, when you can, how Miss Broughton received her billet. Let my sister send me a journal of all the transactions of the females within the circle of your acquaintance. Let Miss Watkins know, that the letter she made herself ridiculous by, was never intended for her; but another young Lady in the neighbourhood, of the same name. I promised, before my departure, to write to some hundreds, I believe; but, what with writing for publications, and going to places of public diversion, which is as absolutely necessary to me as food, I find but little time to write to you. As to Mr. Barrett, Mr. Catcott, Mr. Burgum, &c. &c. they rate literary lumber so low, that I believe an author, in their estimation, must be poor indeed! But here matters are otherwise: had Rowley been a Londoner, instead of a Bristowyan, I could have lived by copying his works.—In my humble opinion, I am under very few obligations to any persons in Bristol: one, indeed, has obliged me; but, as most do, in a manner which makes his obligation no obligation.—My youthful acquaintances will not take it in dudgeon, that I do not write oftener to them, than I believe I shall: but, as I had the happy art of pleasing in conversation, my company was often liked, where I did not like: and to continue a correspondence under such circumstances, would be ridiculous. Let my sister improve in copying music, drawing, and every thing which requires genius: in Bristol's mercantile style those things may be useless, if not a detriment

detriment to her; but here they are highly profitable.—Inform Mr. Rhife that nothing shall be wanting, on my part, in the business he was so kind as to employ me in; should be glad of a line from him, to know whether he would engage in the marine department; or spend the rest of his days, safe, on dry ground.—Intended waiting on the Duke of Bedford relative to the Trinity-House; but his Grace is dangerously ill. My grandmother, I hope, enjoys the state of health I left her in. I am Miss Webb's humble servant. Thorne shall not be forgot, when I remit the small trifles to you. Notwithstanding Mrs. B.'s not being able to inform me of Mr. Garfed's address, through the closeness of the pious Mr. Ewer, I luckily stumbled upon it this morning.

I remain, &c. &c. &c. &c.

Monday Evening.

Thomas Chatterton.

(Direct for me, at Mr. Walmsley's, at Shore-ditch—only.)

LETTER IV.

Tom's Coffee-house, London, May 30, 1770.

Dear Sister,

There is such a noise of business and politicks in the room, that my inaccuracy in writing here, is highly excusable. My present profession obliges me to frequent places of the best resort. To begin with, what every female conversation begins with, dress: I employ my money now in fitting myself fashionably, and getting into good company; this last article always brings me in interest. But I have engaged to live with a Gentleman, the brother of a Lord (a Scotch one indeed), who is going to advance pretty deeply into the bookfelling branches: I shall have lodging and boarding, genteel and elegant, gratis: this article, in the quarter of the town he lives, with worse accommodations, would be 50l. per annum. I shall have, likewise, no inconsiderable premium; and assure yourself every month shall end to your advantage: I will send you two silks this summer; and expect, in answer to this, what colours you prefer. My mother shall not be forgotten. My employment will be writing a voluminous History of London, to appear in numbers the beginning of the next winter. As this will not, like writing political essays, oblige me to go to the coffee-house, I shall be able to serve you the more by it: but it will necessitate me to go to Oxford, Cambridge, Lincoln, Coventry, and every collegiate church near; not at all disagreeable journeys, and not to me expensive. The Manuscript Glossary, I mentioned in my last, must not be omitted. If money flowed as fast upon me as honours, I would give you a portion of 5000l. You have, doubtless, heard of the Lord Mayor's remonstrating and addressing the King: but it will be a piece of news, to inform you that I have been with the Lord Mayor on the occasion. Having addressed an essay to his Lordship, it was very well received; perhaps better than it deserved; and I waited on his Lordship, to have his approbation, to address a second letter to him, on the subject of the remonstrance, and its reception. His Lordship received me as politely as a citizen could; and warmly invited me to call on him again. The rest is a secret.—But the devil of the matter is, there's no money to be got of this side the question. Interest is of the other side. But he is a poor author, who cannot write on both sides. I believe I may be introduced (and, if I am not, I'll introduce myself) to a ruling power in the Court party. I might have a recommendation to Sir George Colebrook, an East-India Director, as qualified for an office no ways despicable; but I shall not take a step to the sea, whilst I can continue on land. I went yesterday to Woolwich, to see Mr. Wensley; he is paid to-day. The artillery is no unpleasant sight, if we bar reflection, and do not consider how much mischief it may do. Greenwich Hospital and St. Paul's Cathedral are the only structures which could reconcile me to any thing out of the Gothic. Mr. Carty will hear from me soon: multiplicity of literary business must be my excuse.—I condole with him, and my dear Miss Sandford, in the misfortune of Mrs. Carty: my physical advice is, to leech her temples plentifully:

VOL. IV.

keep her very low in diet; as much in the dark as possible. Nor is this last prescription the whim of an old woman: whatever hurts the eyes, affects the brain: and the particles of light, when the sun is in the summer signs, are highly prejudicial to the eyes; and it is from this sympathetic effect, that the headache is general in summer. But, above all, talk to her but little, and never contradict her in any thing. This may be of service. I hope it will. Did a paragraph appear in your paper of Saturday last, mentioning the inhabitants of London's having opened another view of St. Paul's; and advising the corporation, or vestry of Redcliff, to procure a more compleat view of Redcliff church? My compliments to Miss Thatcher: if I am in love, I am; though the devil take me, if I can tell with whom it is. I believe I may address her in the words of Scripture, which no doubt she reveres; "If you had not ploughed with my heifer" (or bullock rather); "you had not found out my riddle." Humbly thanking Miss Rumsey for her complimentary expression, I cannot think it satisfactory. Does she, or does she not, intend coming to London? Mrs. O'Coffin has not yet got a place; but there is not the least doubt but she will in a little time.

Essay-writing has this advantage, you are sure of constant pay; and when you have once wrote a piece which makes the author enquired after, you may bring the Booksellers to your own terms. Essays on the patriotic side fetch no more than what the copy is sold for. As the patriots themselves are searching for a place, they have no gratuities to spare. So says one of the beggars, in a temporary alteration of mine, in the Jovial Crew:

A patriot was my occupation

It got me a name but no pelf:

Till, starv'd for the good of the nation,

I begg'd for the good of myself.

Fal, lal, &c.

I told them, if 'twas not for me,

Their freedoms would all go to pot;

I promis'd to set them all free,

But never a farthing I got.

Fal, lal, &c.

—On the other hand, unpopular essays will not even be accepted; and you must pay to have them printed: but then you seldom lose by it. Courtiers are so sensible of their deficiency in merit, that they generally reward all who know how to daub them with an appearance of it. To return to private affairs—Friend Slade may depend upon my endeavouring to find the publications you mention. They publish the Gospel Magazine here. For a whim I write in it. I believe there are not any sent to Bristol; they are hardly worth the carriage—methodistical, and unmeaning. With the usual ceremonies to my mother, and grandmother; and sincerely, without ceremony, wishing them both happy; when it is in my power to make them so, they shall be so; and with my kind remembrance to Miss Webb, and Miss Thorne; I remain, as I ever was,

Yours, &c. to the end of the chapter,

Thomas Chatterton.

P. S. I am this minute pierced through the heart by the black eye of a young Lady, driving along in a Hackney-coach.—I am quite in love: if my love lasts till that time, you shall hear of it in my next.

LETTER V.

June 19, 1770.

Dear Sister,

I have an horrid cold—The relation of the manner of my catching it may give you more pleasure than the circumstance itself. As I wrote very late Sunday night (or rather very early Monday morning), I thought to have gone to bed pretty soon last night: when, being half undressed, I heard a very doleful voice, singing Miss Hill's favorite bedlamite song. The hum-drum of the voice so struck me, that though I was obliged to listen a long while before I could hear the words, I found the similitude in the

7 S

found

We shall add two farther specimens of his satirical poetry [SS]. The first is on the Art of

found. After hearing her with pleasure drawl for above half an hour, she jumped into a brisker tune, and hobbled out the ever-famous song, in which poor Jack Fowler was to have been satirized.—“ I put my hand into a bush: I prick'd my finger to the bone: I saw a ship sailing along: I thought the sweetest flowers to find:” and other pretty flowery expressions, were twanged with no inharmonious bray.—I now ran to the window, and threw up the sash; resolved to be satisfied, whether or no it was the identical Miss Hill, *in propria persona*.—But, alas! it was a person whose twang is very well known, when she is awake, but who had drank so much royal bob (the gingerbread-baker for that, you know), that she was now singing herself asleep. This somnifying liquor had made her voice so like the sweet echo of Miss Hill's, that if I had not considered that she could not see her way up to London, I should absolutely have imagined it hers.—There was a fellow and a girl in one corner, more busy in attending to their own affairs, than the melody.

This part of the letter, for some lines, is not legible.
 the morning) from Marybone gardens; I saw the fellow in the cage at the watch-house, in the parish of St. Giles; and the nymph is an inhabitant of one of Cupid's inns of Court.—There was one similitude it would be injustice to let slip. A drunken fishman, who sells sousé mackarel, and other delicious dainties, to the eternal detriment of all two-penny ordinaries; as his best commodity, his salmon, goes off at three halfpence the piece: this itinerant merchant, this moveable fish-stall, having likewise had his dose of bob-royal, stood still for a while; and then joined chorus, in a tone which would have laid half a dozen lawyers, pleading for their fees, fast asleep: this naturally reminded me of Mr. Haythorne's song of

“ Says Plato, who oy oy oy should man be vain?”

However, my entertainment, though sweet enough in itself, has a dish of four sauce served up in it; for I have a most horrible wheezing in the throat: but I don't repent that I have this cold; for there are so many nostrums here, that 'tis worth a man's while to get a distemper, he can be cured so cheap.

June 29th, 1770.

My cold is over and gone. If the above did not recall to your mind some scenes of laughter, you have lost your ideas of risibility.

LETTER VI. (*)

Dear Mother,

I send you in the box—six cups and saucers with two basons, for my sister—If a china tea pot and cream pot, is in your opinion, necessary, I will send them, but I am informed they are unfashionable, and that the red china, which you are provided with, is more in use—a cargo of patterns, for yourself, with a snuff box, right French and very curious in my opinion.

Two fans—the silver one, is more graver than the other, which would suit my sister best—But that I leave to you both.

Some British herb snuff, in the box; be careful how you open it—(This I omit lest it injure the other matters)

Some British herb tobacco for my grandmother, some trifles for Thorne. Be assured whenever I have the power, my will won't be wanting to testify, that I remember you—

Yours,

July 8, 1770.

T. Chatterton.

N. B.—I shall forestall your intended journey, and pop down upon you at Christmas—

I could have wished, you had sent my red pocket book, as 'tis very material.

I bought two very curious twisted pipes for my grandmother; but both breaking, I was afraid to buy others lest they should break in the box; and being loose, injure the china. Have you heard any thing further of the clearance—

Direct for me at Mrs. Angels', Sack-maker, Brookstreet, Holborn.

“ Mrs. Chatterton.”

LETTER VII.

Dear Sister,

I have sent you some china and a fan. You have your choice of two. I am surprised that you chose purple and gold. I went into the shop to buy it: but it is the most disagreeable colour I ever saw—dead, lifeless, and inelegant. Purple and pink, or lemon and pink, are more genteel and lively. Your answer in this affair will oblige me. Be assured, that I shall ever make your wants, my wants; and stretch to the utmost to serve you. Remember me to Miss Sandford, Miss Rumsey, Miss Singer, &c. &c. &c.

As to the songs, I have waited this week for them, and have not had time to copy one perfectly: when the season's over, you will have 'em all in print. I had pieces last month in the following Magazines:

Gospel Magazine,

Town and Country, viz.

Maria Friendless,

Falfe Step.

Hunter of Oddities,

To Miss Bush, &c.

Court and City. London. Political Register, &c. &c.

The Christian Magazine, as they are not to be had perfect, are not worth buying—I remain,

Yours,

July 11, 1770.

T. Chatterton.

LETTER VIII.

I am now about an Oratorio, which, when finished, will purchase you a gown. You may be certain of seeing me before the 1st of January, 1771.—The clearance is immaterial.—My mother may expect more patterns.—Almost all the next Town and Country Magazine is mine. I have an universal acquaintance:—my company is courted every where; and, could I humble myself to go into a compter, could have had twenty places before now:—but I must be among the great; state matters suit me better than commercial. The Ladies are not out of my acquaintance. I have a deal of business now, and must therefore bid you adieu. You will have a longer letter from me soon—and more to the purpose.

Yours,

20th July, 1770.

T. C.

[SS] Two farther specimens of his satirical Poetry.]

THE ART OF PUFFING,

By A BOOKSELLER'S JOURNEYMAN.

VERS'D by experience in the subtle art,
 The myst'ries of a title I impart:
 Teach the young author how to please the town;
 And make the heavy drug of rhyme go down.
 Since Curl, immortal, never dying name,
 A double pica in the book of fame,
 By various arts did various dunces prop,
 And tickled every fancy to his shop:
 Who can like Pottinger ensure a book?
 Who judges with the solid taste of Cooke?
 Villains exalted in the midway sky,
 Shall live again, to drain your purses dry:

Nor

(*) Chatterton had probably changed his lodging a little before he wrote this letter. It is a remarkable passage where he says, he wishes she had sent him up his red pocket book, “ as 'tis very material.” “ More graver,” in the 11th line, confirms Mr. Bryant's opinion, p. 481, “ that he was not well grounded in the first principles of Grammar.”

of Puffing, and the other an Extract from the unpublished Manuscript of the Poem entitled "Kew Gardens." A fac-simile of this extract is given by Dr. Gregory.]

Nor yet unrivall'd they; see Baldwin comes,
Rich in inventions, patents, cuts and hums:
The honorable Boswell writes, 'tis true,
What else can Paoli's supporter do?

The trading wits endeavour to attain,
Like booksellers, the world's first idol—gain:
For this they puff the heavy Goldsmith's line,
And hail his sentiment tho' trite, divine;
For this, the patriotic bard complains,
And Bingley binds poor liberty in chains:
For this was every reader's faith deceiv'd,
And Edmund swore what nobody believ'd:
For this the wits in close disguises fight;
For this the varying politicians write;
For this each month new magazines are sold,
With dulness fill'd and transcripts of the old.
The Town and Country struck a lucky hit,
Was novel, sentimental, full of wit:
Apeing her walk, the same success to find,
The Court and City hobbles far behind:
Sons of Apollo learn, merit's no more
Than a good frontispiece to grace her door;
The author who invents a title well,
Will always find his cover'd dullness sell;

Flexney and every bookseller will buy,
Bound in neat calf, the work will never die.
V A M P.

July 22, 1770.

K E W G A R D E N S .

WHAT are the wages of the tuneful nine,
What are their pleasures when compar'd to mine?
Happy I eat and tell my num'rous pence,
Free from the servitude of rhyme and sense;
Tho' sing-song Whitehead ushers in the year,
With joy to Britain's King and Sovereign dear:
And in compliance to an ancient mode,
Measures his syllables into an ode;
Yet such the scurvy merit of his muse,
He bows to Deans and licks his Lordship's shoes.
Then leave the wicked barren way of rhyme,
Fly far from poverty, be wise in time:
Regard the office more, Parnassus less,
Put your religion in a decent dress:
Then may your interest in the town advance,
Above the reach of muses or romance.

A P P E N D I X, No. II.

V O L. IV. Page 544.

* * [CRUDEN, (ALEXANDER), M. A. was the second son of Mr. William Cruden, Merchant, and one of the Baillies of Aberdeen, an office similar to that of Alderman in England, and was born in the year 1701. He received his education in the Grammar School of Aberdeen, and was a schoolfellow with the late George Earl Marischal, and James, afterwards the celebrated Field Marechal Keith, who in the school catalogue were distinguished by *Dominus Georgius Keith*, and *Magister Jacobus Keith*. At the expiration of the usual number of years, Mr. Cruden entered as Student of Marischal College. From his close attendance at the Divinity Lectures of Mr. Blackwell, father to the late Principal Blackwell, he appears to have had thoughts of the church, as a profession; and although prevented by the melancholy change of mind which took place about this time, he preserved through the whole of life the impression that he was appointed by Heaven to preach the gospel and reform mankind.

It is uncertain to what that insanity which now appeared in his words and actions, and which with few intervals accompanied him to his grave, is to be attributed. Some thought it was occasioned by the bite of a mad dog; but nothing can be gathered from the history of that dreadful distemper which favours this opinion. Others derived his madness from disappointment in a love affair, but it is uncertain whether this operated as a cause or consequence. Some uncommon circumstances with which it was attended, however, will apologize for making mention of it in this place. The object of his affection was the daughter of a Clergyman of Aberdeen. Cruden courted her with enthusiasm and perseverance, but the Lady thought proper to reject his addresses, and his behaviour becoming outrageous and troublesome, her father ordered his doors to be shut against him. This increased his passion, and his friends soon found it necessary to confine him for a considerable time in prison. The young Lady in the mean while became pregnant, which was with too much reason attributed to a criminal intercourse with her own brother (a). She was sent into the country, and never returned. That Mr. Cruden shared in the general horror which this event produced may be easily believed. He never mentioned the name of the unhappy woman but with the bitterest grief and most tender compassion.

(a) As there are some relations of the parties yet living the names are omitted.

On his release from confinement, he gave up the pursuit of his studies at Aberdeen, and resolved to leave his native country. In the year 1722 he came to London, and engaged in several families as private Tutor to young persons at School, or who were intended for the University. In this employment he spent some years in the Isle of Man. In the year 1732, we find him in London again, as corrector of the press, and bookseller. His shop was under the Royal Exchange. While in this situation an incident happened which Mr. Cruden numbered among the most remarkable occurrences of his life. A Gentleman from Aberdeen (b), who wished to serve Cruden, offered to introduce him to a Mer-

(b) Father to the writer of this article.

a Merchant near the Royal Exchange, a near relation of the young Lady above-mentioned. When they knocked at the door of this Merchant's house, it was opened by the young Lady herself, who, unknown to Mr. Cruden or his friend, had found an asylum here. Mr. Cruden started back, with visible signs of wonder, and agony, and grasping his friend's hand, exclaimed wildly, "Ah! she has still her fine black eyes." It is perhaps unnecessary to add, that his hopes of intimacy in this family were now at an end. He did not then, nor ever after, enter the house, nor court the acquaintance of its owner, who was indeed a younger brother of the Lady.

The year after, he began to compile the work which entitles him to be ranked among the friends of literature, and consequently to a place in these records. He had long meditated "A Complete Concordance of the Holy Scriptures of the Old and New Testament." If the merit of labour only be given to this work, it must be acknowledged that it required labour to which it is impossible to make any addition, and perseverance that knows no interval. Mr. Cruden was well qualified for such an undertaking; for habits of industry were familiar to him, and his inclination led him to form the plan and indeed to execute the whole before he had received any encouragement from the public. The first edition was published in the year 1737. The preface explains his plan and his views in publishing [A]. The book was dedicated to Queen Caroline, who had given the author some reason to expect a gratuity on its being presented to her. But a very few days before its publication, the Queen died [B], and Cruden lost his Patroness. His affairs were now embarrassed; the time he had bestowed on his work was not productive of immediate profit, and his reward was no longer to be expected; for that he did expect a reward from her Majesty appeared by visible symptoms of the keenest disappointment. He disposed of his stock in trade and shut up his shop. Without employment, without friends, and without hope, he became again a prey to his phrenetic disorder, and it was found necessary to confine him in a private Madhouse at Bethnal Green. As soon as he was released he took revenge on his keepers, and on those who were the cause of his confinement, by publishing a pamphlet, entitled "The London Citizen exceedingly injured, giving an account of his adventures during the time of his severe and long campaign at Bethnal Green, for nine weeks and six days, the Citizen being sent thither in March 1738, by Robert Wightman a notoriously conceited whimsical man, where he was chained, hand-cuffed, strait-waistcoated and imprisoned, &c. &c." He also commenced an action against Dr. Monro, and other defendants, which was tried in Westminster-Hall, July 17, 1739, when a verdict was given in favour of the defendants. After

[A] *His views in publishing.* After reviewing the principal works of this kind which had appeared, Mr. Cruden says, "Thus it appears that we have had Concordances to the Bible some centuries ago; and the world has been so sensible of their usefulness, that many of them have been composed and published in different languages. But as there are several in our language, it may be enquired, What occasioned my undertaking this great and laborious work, or what advantage it has above any other hitherto published?"

"When I first began this work, I designed to compose an useful Concordance in octavo; but after I had printed several specimens, I found it necessary to alter my scheme, and to compile one to be printed in this large volume, in order to make those improvements which now render it preferable to any other.

"The method is easy and regular, and each text of Scripture is generally contained in one line, whereby the reader may readily find the place he wants, if he remembers any material word. When there are two or more texts of Scripture that are parallel, I have generally mentioned the first that occurs in order in the Bible, and have directly added the parallel texts. It is printed with a good letter, though pretty small, which was necessary in order to bring it into this volume, and make it contain *multum in parvo*, much in a little compass; and great care has been taken that the figures referring to the chapters and verses of the Bible be exact and correct. When a text is marked with a †, it denotes a marginal reading.

"This CONCORDANCE is divided into three alphabets. The first alphabet contains the appellative or common words, which is the principal part. It is very full and large, and any text may be found by looking for any material word, whether it be substantive, adjective, verb, &c.

"In this part I have given the various significations of the principal words, which, I hope,

"will be esteemed an useful improvement, there not being any thing of this kind in the other large Concordances: By this improvement the reader will have many texts explained, and difficulties removed; and the meaning of the Scripture may be here known by that which is accounted the best rule of interpreting Scripture, namely, by comparing one Scripture with another. There is so large a collection of the various significations of many words in Scripture, as may, perhaps, be not only useful to private Christians, but also to those who preach the Gospel, for hereby many important things may be observed at one view, without the trouble of turning over several volumes; and occasion is sometimes taken to give an account of the Jewish customs and ceremonies, by which the reader is led into the meaning of many passages of Scripture, as may be seen in the words, Elder, Ephod, Synagogue, &c.

"The second alphabet contains the proper names in the holy Scriptures, which the reader will receive with improvements, as in Abraham, David, &c. The texts referred to, where those names are mentioned, give a short historical account of the remarkable things recorded in Scripture concerning them. To this part is prefixed a table, containing the significations of the words in the original languages from which they are derived.

"The third and last alphabet is a Concordance for those books that are called APOCRYPHAL, which is only added that this work might not be deficient in any thing that is treated of in any other Concordance; those books not being of divine inspiration, nor any part of the Canon of Scripture, and therefore are of no authority in the Church of God (1)."

[B] *The Queen died.* Mr. Cruden says in a note to his Dedication, that it "was presented Nov. 3, 1737, to her Majesty, who departed this life the 20th of that very month." It was presented, however, before it was published.

(1) Preface to the first edition.

the verdict was given, Cruden said, "I trust in God." The Chief Justice, Sir William Lee, replied, "I wish you had trusted more in God, and not have come hither." Mr. Cruden had recourse again to his pen, and published an account of the trial with remarks on the Oeconomy of Private Madhouses, which he dedicated to the late King.

After this he lived chiefly by correcting the press, and under his inspection several editions of the Greek and Roman Classics were published with great accuracy. He rendered himself useful to the booksellers and printers in various ways. His manners were inoffensive: he was always to be trusted, and performed his engagements with strict fidelity. In these occupations he employed several years, until the return of his disorder obliged his friends a third time to shut him up in a madhouse. When he was released, he published his case with the whimsical title of "The Adventures of Alexander the Corrector."—Three parts afterwards appeared under the same title. It is not easy to characterize them. They are a faithful transcript of a wild mind, various, whimsical, serious and jocose. His madness was *sui generis*. We find nothing like it in the Annals of Medicine, nor can it be accounted for on any known principles of physiology. The faculty are seldom called in, and seldom attend to cases like that of Cruden; and the world either laughed at or pitied him: in his worst paroxysms it appears that he was perfectly harmless, and it is more than probable that the severity of confinement, unnecessarily added to his disorder [C].

In September 1753, when last released, he undertook what was more difficult to effect than all his former attempts. He endeavoured to persuade one or two of his friends who had confined him, to submit to be imprisoned in Newgate, as a compensation for the injuries they had brought upon him. To his sister he proposed what he thought very mild terms; she was to have her choice of four prisons; Newgate, Reading and Aylesbury Jails, and the prison in Windsor Castle. When he found that his persuasions were of no avail, he commenced an action against her and three others, and stated his damages at 10,000*l*. The cause was tried in February, 1754, and a verdict given in favour of the defendants. Cruden had now no remedy but in an appeal to the public: accordingly he published an account of this trial in a six-penny pamphlet, dedicated to the King. He went to St. James's Palace to present it, but was prevented, and denied the honour of Knighthood, to which, at this time, he aspired.

His phrenzy, indeed, was now at its height. He called himself "Alexander the Corrector," and gave out that he was commissioned by Heaven to reform the manners of the age, particularly to restore the due observance of the Sabbath. To raise the public belief in his favour, he produced and printed certain prophecies of eminent Ministers and others, all anonymous, or with the initials only of names. The substance of these prophecies was, that "Mr. Cruden was to be a second Joseph, to be a great man at Court, and to perform great things for the spiritual Israel in this sinful Egypt, &c." Furnished with such credentials, he went to Oxford and Cambridge, and exhorted the Ladies and Gentlemen, whom he found in the public walks on the Sabbath, to go home and keep that day holy. But his advice was not welcomed as he wished. And on one occasion he narrowly escaped corporal chastisement for having been too bold in his addresses to a young Lady, who happened to be walking with a Student in Clare-Hall walks. He generally followed his advice with a denunciation of eternal wrath in case of non-compliance.

On his return to London his ambition increased; for ambition he certainly indulged from the idea that he was destined to a superior station in life; and the general election approaching, Mr. Cruden determined to stand candidate for the city of London, and in a Common Hall was nominated by Mr. Sheriff Chitty, whom he had importuned to do this office for him. What will be thought very remarkable, Mr. Cruden had the satisfaction to see several hands held up for him; but he declined the poll which was instituted by the other party, and consequently lost his election. It is scarcely possible to record this event with historical gravity; but it is worthy of notice that he had actually received promises of support, and was comforted by the reflection, as he says himself, that if he had not the hands, he had the hearts of the citizens. His advertisements on this occasion are too curious not to be preserved [D]. They are specimens of his manner of speaking and writing

[C] *Unnecessarily added to his disorder.* They put a straight waistcoat upon him, and beat him, which he relates thus: "When the *Corrector* went to bed, the barbarous *Inskip* (one of his keepers) bound him very closely in the *straitwaiste-coat*. This academical garment is made of strong tick, with long sleeves which come below the ends of the fingers, and the prisoner's arms being clasped upon his breast, and brought round his sides towards his back, his hands are tied there very firmly with strong strings of tape.—The *Corrector* was very ill used this night: particularly *Inskip* swore at him for calling out in his pain, alas! alas! And a common method with *Inskip* and *Hare*, upon his calling out through pain, was to give him a blow

VOL. IV.

"or two on the breast, and to put a pillow or handkerchief upon his mouth." Usage like this was certainly not to be justified by any part of Mr. Cruden's conduct, and must have aggravated his distemper.

[D] *Not to be preserved.* "Wednesday, April 17, it appeared from what one of the door-keepers of the palace said to the *Corrector*, that the letter sent by him to the personage of the highest rank (*asking the honour of knighthood*) came safe to hand. The *Corrector*, perceiving that he was not likely to succeed at present in obtaining the honour of knighthood; and the election for the Representatives of the City of London in Parliament coming on the 30th instant, it was full time to declare his

7 T

"re-

writing concerning himself, when his phrenzy was at its height. About the same time he paid his addresses to a Lady, but lamented that in this as in every other great design, he could not command success.

Amidst this series of wild attempts and undertakings Mr. Cruden devoted his best hours to study. He was continually making additions to the Concordance, the second edition of which was published in 1761 [E]. At this time he was corrector of the press to the Public Advertiser published by the late Mr. Woodfall. He laboured, indeed, incessantly at some employment or other; and apportioned his time so judiciously that only when he appeared in public could he be said to do nothing. The business of the Printing-Office was rarely over before one o'clock in the morning, when the paper was put to press. Cruden seldom slept more than four or five hours, and before six in the morning

" resolution to offer himself a candidate, though not yet graced with the order of knighthood. If it should be asked, why the *Corrector* was so desirous of the honour of being a knight; he answers, that thinking men often seek after titles rather to please others than themselves.

" Thursday, April 18, the *Corrector* now suspended his going to Court, and wrote an appendix to his *Adventures*, containing the motives of his being a candidate for the City of London, and next day caused copies of it to be dispersed in the coffee-houses near the Royal Exchange.

" Saturday, April 20, was the first day the *Corrector* made known his being a candidate in the News papers. He was this morning at the Chapter Coffee-house, where some cloudy-headed Bookfellers and Printers dissuaded him from it, and told him it was now too late: but the *Corrector* replied, that he was not to look backward but forward. The appendix was from henceforth distributed, and when the *Corrector* himself had an opportunity of delivering a copy of it to a Liveryman, he desired the favour of him to read it, and then to vote as his conscience should direct him. It was replied by some, that nothing could be fairer. Several thousands of the appendix were distributed before and on the day of election.

" Tuesday, April 23, the *Corrector*, a Citizen and Liveryman of the Company of Stationers, thought it proper to acquaint the *Sheriffs* of his being a candidate, and therefore sent each of them the following letter:

" To the honourable Alderman Chitty and Alderman Blakiston, the two *Sheriffs* of London.

" Gentlemen,

" I humbly propose myself one of the candidates to be a Representative for the City of London, at the ensuing election; which may be looked upon as an extraordinary step. This is not denied, but I trust I am under divine direction, and I entirely refer the issue to the supreme disposer of all things. I hope that whatever pleaseth God shall please me, being altogether resigned to his will and pleasure. It ought to be my care to do my duty, and then to refer all events to God: It is the opinion of the *Corrector* that all the prophecies concerning him will come to pass in God's own time and way. The LORD was with JOSEPH, and that which he did the LORD made it to prosper.

" May the great God be pleased powerfully and graciously to incline the hearts of the Liverymen to act from the best principles, and to choose those who will be faithful, and will answer the ends of so great a trust: and may the persons who shall be chosen be inclined and determined to act zealously for the reformation, the peace and prosperity of the City.

" Heartily wishing you happiness in this world and in the world to come,

" I am, with great respect,

" Gentlemen,

" Your most obedient

North's Coffee-house, " And most humble servant,

near Guildhall,

April 23, 1754. " ALEXANDER CRUDEN."

" Thursday, April 25, the *Corrector* caused the following letter, addressed to the Liverymen of London, to be dispersed:

" Gentlemen of the Livery,

" I have acquainted the *Sheriffs* of my humbly proposing to be a candidate for one of the Representatives in Parliament of the City of London: which may be looked upon as an extraordinary step. This is not denied, but I trust I am under the direction of a gracious providence, and I desire to be entirely resigned to the will of God the supreme disposer of all things. In the appendix to *Alexander the Corrector's Adventures*, I have acquainted you with some of my motives for being a candidate, which are such as, I hope, will be approved of by every good man, as they are by my own conscience.

" If there is any just ground to hope that God will be pleased to make the *Corrector* an instrument to reform the nation, and particularly to promote the reformation, the peace and prosperity of this great City, and to bring its inhabitants to a more religious temper and conduct, no good men in such an extraordinary case will deny the *Corrector* his vote: and the *Corrector's* election may be a means to pave the way to his being a JOSEPH, and an useful prosperous man.

" May God be pleased to give a happy turn to the minds of the electors to act from the best principles, and to choose those who will be faithful to their trust, and study to promote the temporal and eternal happiness of the people.

" My earnest prayers are put up from time to time for your happiness in this world, and the world to come through JESUS CHRIST.

" I am very respectfully,

" Gentlemen,

" Your most obedient

" And affectionate humble servant,

North's Coffee-house,
near Guildhall,

April 25, 1754. " ALEXANDER CRUDEN (2)." (2) *Adventures*

[E] Was published in 1761.] And dedicated to his present Majesty. A short preface informs us, that "as to what respects this NEW EDITION, notwithstanding the great pains taken in the first, there was room for improvements. The filling up of the lines to make the text fuller could not so well be done in the manuscript copy, as in the printed. This renders the sentences more complete in many thousands of places: moreover the texts are more distinct in many places by the leading words being distinguished in *Italic characters*. Some texts are added, and some improvements are made in the *significations* of words, and an historical account is given of some eminent persons under their proper names; and other things that need not here be particularly mentioned.

" The labours of many persons to compile Concordances to the Bible, and their acceptance from time to time by the public, shew their usefulness: It may be reckoned a good sign that religion is revived in some considerable degree in the present age, by the great demand for Concordances and religious books. The first edition of several thousands in number has been long sold off, which shews this book's favourable reception from the public; and a demand has long been made for a new edition." June 11, 1761, A. C.

he might always be found turning over his Bible, adding, amending, and improving his Concordance with great and scrupulous attention: at this he continued till evening, when he went to the Printing Office. This assiduous attention to useful objects, it was hoped, would restore his mind to a state of calm regularity, and in some degree this was the case. His next appearance in public will be seen with satisfaction.

In 1762, one Richard Potter, a Sailor, was tried and capitally condemned at the Old Bailey for forging, or rather uttering, knowing it to be forged, a Seaman's Will, a crime which then, as well as now, is rarely pardoned. It appeared, however, from the evidence, that Potter was a poor illiterate creature, the tool of another, and ignorant of the nature of the crime he committed. Fortunately for him Mr. Cruden happened to be in Court; and was so firmly convinced that Potter was a proper object of the Royal clemency, that he determined to interfere in his behalf.—To be more fully satisfied, however, he visited Potter in Newgate, examined him, and found that his crime was the crime of ignorance, without any evil intention on his part. But it was not to save him from the sentence of the law only that Cruden meditated. He prayed with him, exhorted him, taught him the principles of religion, and gave him a proper sense of the wickedness of his past life, and the enormity of the crime for which he was condemned: in a word, he made a convert of a poor wretch who had scarcely ever heard of a God. He then began to devise means to obtain a pardon, and improbable as it appeared, his repeated applications succeeded, and Potter's sentence was changed into transportation. Mr. Cruden accompanied his petition to the Earl of Halifax, then Secretary of State, with a copy of the second edition of the Concordance, to which was prefixed an elegant Latin Dedication to his Lordship [F]. The tenderness with which Mr. Cruden visited, exhorted, fed and cloathed his pupil, the anxiety he felt, and the unceasing importunity of his applications to every person that could be useful to Potter, deserve to be remembered with approbation, and to reconcile us to all his oddities. A particular account of the whole affair was published the same year, entitled "The History of Richard Potter, &c. &c."

The success Mr. Cruden had enjoyed in reforming this poor criminal induced him to continue his labours among the other felons in Newgate. He visited them every day, gave them New Testaments, Catechisms, &c. catechised them, and bestowed small pecuniary rewards on the most apt scholars. His labour, however, was lost; the books were soon exchanged for money, and the money spent in drinking; and Cruden discontinued his practice when he found it produced no better effects. A regard for the eternal welfare of his fellow-creatures was a predominant feature in his character. He was peculiarly elated when he had succeeded in rescuing any poor creature from the barbarity of ignorance or the practice of wickedness. Of this we have another instance, but at what period it happened cannot now be remembered. Returning one Sunday evening from a place of worship, he accidentally met with a man whose looks betrayed anxious sorrow, melancholy, and, as Cruden imagined, despair. He immediately accosted the man, and drew from him a confession that the extreme poverty of his family, and other causes, had driven him to the desperate resolution of committing suicide. Mr. Cruden expostulated with him, displayed the wickedness of his intention, and administered such friendly consolation, accompanied with pecuniary assistance and a promise of future support, that the poor man became chearful, resigned and hopeful. In such acts Mr. Cruden delighted.

At the time when the disputes between Mr. Wilkes and the Government agitated the nation, Mr. Cruden wrote a small pamphlet against that Gentleman, whom he never could bear named with patience. He testified his aversion to him in a way peculiar to himself, by effacing No. 45, wherever he found it chalked on doors or window-shutters. His instrument was a large piece of sponge, which he carried in his pocket, partly for this purpose, and partly that no words, offensive to good morals, might be allowed to disgrace the walls, doors, &c. of the metropolis. This employment rendered his walks through the city very tedious.

In the year 1769 he visited Aberdeen, the place of his nativity, and in a public hall gave a lecture on the cause of reformation; contended that he was born to reform the age, and exhorted all ranks to amend their ways. There was nothing in this advice improper or absurd—but Mr. Cruden's manner was always at variance with his matter, and he met with no better success here than in other places. Many anecdotes are related of his labours

[F] *Dedication to his Lordship.* The dedication is the following.

Nobilissimo, Consultissimo, Excellentissimoque Viro GEORGIO MONTAGU DUNK, COMITI de HALIFAX, Serenissimo REGI GEORGIO TERTIO à Secretis fidelissimo, nec non per multos annos Commercii Insularum occidentalium & Coloniarum in America primario Gubernatori felicissimo, et nuper Praefecto supremo in Hibernia dignissimo, et ab omnibus Hiberniae Incolis dilectissimo, ac etiam durante praesenti infelici motu intestino in BRITANNIA ab omnibus cujuscunque ordinis probatissimo.

Hoc Dictionarium Christianum, Scripturarum sacrarum Concordantia, in signum ingentis observantiae, et verae gratitudinis propter insignam benevolentiam tuam in ansultando supplicationibus meis ardentibus, & RICHARDUM POTTER à mortis pena liberando, humillime offertur: Et COMITI DE HALIFAX omnimodam felicitatem & gratiam ac pacem à DEO per CHRISTUM precatur

ALEXANDER CRUDEN.

Londini, Ivy-lane, Idibus Septembris, Anno Æræ Christianæ, 1763.

here,

here. Among others, he printed the Fourth Commandment in the form of a hand-bill, and distributed them to all persons, without distinction, whom he met in the streets on Sunday. To a young Clergyman whom Cruden thought too conceited and modern, he very gravely and formally presented a little catechism, used by children in Scotland, called "The Mother's Catechism," dedicated to the *Young and Ignorant*. For young people he always had his pockets full of religious tracts, such as Guyse's Sermons, &c. which he bestowed with pleasure on such as promised to read them.

After residing about a year at Aberdeen he returned to London, and took lodgings in Camden-street, Islington, where he died. In the morning of Thursday, November 1, 1770, he was found dead on his knees, apparently in the posture of prayer. He had complained for some days of an asthmatic affection, but it did not seem attended with danger. As he never married, he bequeathed his moderate savings to his relations, except a certain sum to the city of Aberdeen to be employed in the purchase of religious books for the use of the poor; and he founded a bursary (or exhibition) of five pounds sterling *per annum*, to assist in educating a Student at the Marischall College. This bursary was to be obtained on certain terms specified in his will, one of which was a perfect acquaintance with Vincent's Catechism.

In private life Mr. Cruden was courteous and affable; prone to give his opinions, and firm in all his religious persuasions. To the poor he was as liberal of his money as of his advice: he seldom, indeed, separated the one from the other. His concern for them must have been sincere, for interest he could have none; and his generosity must have been pure, for he often gave more than he retained for his own uses. To such young men, especially from Aberdeen, as were recommended to him, he acted like a father, or affectionate friend and tutor. Among men of genius he cannot be classed: but in his greatest labours he experienced no fatigue, and the utility of his literary projects will not admit of a dispute. His Concordance was his favourite work [G]; and it is probable that the attention he bestowed upon it was favourable to the state of his mind, although it could not altogether prevent the return of that phrenzy which gave a certain colour to all his actions, and suggested to him those whimsical plans of reformation, and those hopes of superiority, which were as useless to himself as unprofitable to others. In conversation and in writing his style was stiff and awkward. He does not appear to have had a prompt memory, and his words came slowly. In religion he professed Calvinism, as appears from the definitions in his Concordance of the words *grace, faith, predestination*, &c. But it must be added, that he had not an intolerant spirit, and often with severity he censured the principles and practices of narrow-minded men. During the greatest part of his life in London, he joined in communion with Dr. Guyse's Independent Meeting; but about the year 1761-2, when age and infirmities obliged the Doctor to resign, and Dr. Stafford succeeded him, Mr. Cruden attended Dr. Conder on the paved stones, Moor-fields, and went to Dr. Guyse's Meeting on the first Sunday of every month only, when the Sacrament was administered.]

[G] *His Concordance was his favourite work.* The last edition of this work was the fourth, published in 1786. The two former editions as well as this are

embellished with a head of the author. That published in 1769 is the most striking likeness.

7

DANIEL

D.

DANIEL (SAMUEL), an eminent Poet and Historian [A], in the reigns of Queen Elizabeth and King James I. was the son of a Music-master; and born near Taunton in Somersetshire (a), in the year 1562. In 1579 (b), he was admitted a Commoner of Magdalen-Hall in Oxford; where he continued about three years, and, by the help of an excellent Tutor, made a considerable improvement in academical

(a) Fuller's Worthies of England. Som. rf. p. 28.

(b) Langbaine, ubi infra, says, in 1581.

[A] *An eminent Poet and Historian.* Mr. Daniel's Poetical Works, consisting of Dramatic and other Pieces, are as follows. I. *The Complaint of Rosamond*. London, 1594, 1598, 1611, and 1623, in 4to. II. *A Letter from Octavia to Marcus Antonius*. London, 1611, in 8vo. (1). These two pieces resemble each other both in the subject and stile, being written in the Ovidian manner, with great tenderness and variety of passions. The measure is stanzas of seven lines, of which take the following specimen, where he makes Rosamond speak of Beauty in as expressive a manner as description can reach.

Ah! Beauty, Syren, fair enchanting good,
Sweet silent rhet'rick of persuading eyes;
Dumb eloquence, whose pow'r doth move the blood,
More than the words or wisdom of the wise;
Still harmony, whose diapason lies
Within a brow; the key, which passions move,
To ravish sense, and play a world in love (2).

III. *Hymen's Triumph: A Pastoral Tragi-Comedy. Presented at the Queen's Court in the Strand, at her Majesty's magnificent entertainment of the King's most excellent Majesty, being at the nuptials of the Lord Roxborough.* London, 1623, 4to. second edition (3). It is dedicated by a copy of verses *To the most excellent Majesty of the highest born Princess, Anne of Denmark, Queen of England, Scotland, France, and Ireland.* It is introduced by a pretty contrived Prologue, by way of dialogue, in which *Hymen* is opposed by *Avarice*, *Envy*, and *Jealousy*, the disturbers of quiet marriage. In this piece, our author sometimes touches the passions with a very delicate hand. IV. *The Queen's Arcadia: A Pastoral Tragi-Comedy. Presented to her Majesty and her Ladies, by the University of Oxford, in August, 1605.* London, 1623, 4to. (4). It is dedicated by a copy of verses *To the Queen's most excellent Majesty.* V. *The Vision of the Twelve Goddesses, presented in a Mask, the eighth of January, at Hampton-Court, by the Queen's most excellent Majesty and her Ladies.* London, 1604, 8vo. and 1623, 4to. Some copies have it, *The Wisdom of the Twelve Goddesses, &c.* (5). It is dedicated to the Right Honourable the Lady Lucy, Countess of Bedford. It had been printed without the author's leave, and so imperfectly, that, to prevent the prejudice it might suffer thereby, he published it from his own copy. His design, under the shapes, and in the persons of twelve goddesses, was, to shadow out the blessings, which the nation enjoyed under the peaceful reign of King James I. By *Juno* was represented *Power*; by *Pallas*, *Wisdom* and *Defence*; by *Venus*,

Love and *Amity*; by *Vesta*, *Religion*; by *Diana*, *Chastity*; by *Proserpine*, *Riches*; by *Macaria*, *Felicity*; by *Concordia*, the *Union of Hearts*; by *Astræa*, *Justice*; by *Flora*, the *Beauties of the Earth*; by *Ceres*, *Plenty*; and by *Tethys*, *Naval Power*. All these allegorical personages were properly attired, and offered up the several emblems of their power to the temple of *Peace*, erected upon four pillars, representing the four Virtues, that supported a globe of the earth. 1. *Juno*, in a sky-coloured mantle, embroidered with gold, and figured with peacocks feathers, wearing a crown of gold on her head, presents a sceptre. 2. *Pallas* (which was the person her Majesty chose to represent) was attired in a blue mantle, with a silver embroidery of all weapons and engines of war, with an helmet on her head; and presents a lance and target. 3. *Venus*, in a mantle of dove-colour, and silver embroidered doves, presented (instead of her *Cestus*, the Girdle of Amity) a scarf of divers colours. 4. *Vesta*, in a white mantle embroidered with gold flames, and dressed like a Nun, presented a burning lamp in one hand, and a book in the other. 5. *Diana*, in a green mantle embroidered with silver half-moons, and a crescent of pearl on her head, presents a bow and a quiver. 6. *Proserpine*, in a black mantle embroidered with gold flames, with a crown of gold on her head, presents a mine of gold ore. 7. *Macaria*, the Goddess of Felicity, in a mantle of purple and silver, embroidered with the figures of Plenty and Wisdom (which concur to the making of true happiness) presents a *Caduceus* with the figure of Abundance. 8. *Concordia*, in a party-coloured mantle of crimson and white (the colours of England and Scotland joined) embroidered with silver hands in hand, with a head-dress likewise of party-coloured roses, presents a branch thereof in a wreath or knot. 9. *Astræa*, in a mantle of crimson embroidered with silver, figuring the sword and balance (the emblems of Justice) which she presented. 10. *Flora*, in a mantle of divers colours, embroidered with all sorts of flowers, presents a pot of flowers. 11. *Ceres*, in a straw-colour and silver embroidery, with ears of corn, and a head-dress of the same, presents a sickle. 12. *Tethys*, in a sea-green mantle, with a silver embroidery of waves, and a head-dress of reeds, presents a trident (6). VI. *The Tragedy of Cleopatra.* (6) Poetical Lond. 1594 and 1598, 4to (7). It is dedicated by a copy of verses *To the Right Honourable the Lady Mary, Countess of Pembroke.* VII. *The Tragedy of Philotas.* London, 1611, &c. 8vo. (8). It is dedicated by a copy of verses *To the Prince*, afterwards King Charles I. This play met with some enemies, not on the score of the wit, or conduct of the design;

(6) Poetical Works, &c. vol. i. p. 228, &c. (7) Wood, ubi supra. (8) *Ibid.*

demical learning. But his genius inclining him more to studies of a softer and gayer nature, he left the University without a degree, and applied himself to English History and

sign; but because it was reported, that the character of *Philotas* was drawn for the unfortunate Earl of Essex; which obliged the author to vindicate himself from this charge in an *Apology*, printed at the end of the play. Both this play, and that of *Cleopatra*, are written after the manner of the antients, with a chorus between each act; and were much esteemed in their time. VIII. *The History of the Civil Wars between the Houses of York and Lancaster*. A Poem in eight books. London, 1604, 8vo. and 1623, 4to. with his picture before it (9). It is dedicated *To the High and most Illustrious Prince Charles His Excellence*. The introduction to this Poem is plainly an imitation of the beginning of *Lucan's Pharsalia*.

(9) Wood, *ubi supra*.

I sing the Civil Wars, tumultuous broils,
And bloody factions of a mighty land;
Whose people, haughty, proud with foreign spoils,
Upon themselves turn back their conqu'ring hand;
Whilst kin their kin, brother the brother foils;
Like ensigns all against like ensigns band;
Bows against bows, the crown against the crown;
Whilst all pretending right, all right's thrown down.

What fury, O! what madness held thee so,
Dear England, too, too prodigal of blood,
To waste so much, and war without a foe;
Whilst France, to see thy spoils, at pleasure stood!
How much might'st thou have purchas'd with less woe,

T' have done thee honour, and thy people good?
Thine might have been whatever lies between
The Alps and us, the Pyrenees and Rhene (10).

(10) Poetical Works, &c. vol. ii. p. 5, 6.

IX. *Funeral Poem upon the Death of the late Earl of Devonshire*. London, 1623, 4to. X. *A Panegyrick Congratulatory, delivered to the King's most excellent Majesty at Burleigh-Harrington, in Rutlandshire*. London, 1604 and 1623, 4to. XI. *Epistles to various great Personages in Verse*. London, 1601 and 1623, 4to. (11). XII. *The Passion of a distressed Man, who being in a Tempest on the Sea, and having in his Boat two Women (of whom he loved the one, that disdained him; and scorned the other, who affected him) was by Commandment from Neptune to cast out one of them, to appease the Rage of the Tempest; but which was referred to his own choice* (12). If the reader is curious to know the determination of this man's choice, it is summed up in the concluding line of the Poem;

(12) Poetical Works, &c. vol. ii. p. 364.

She must be cast away, that wou'd not save.

(13) Wood, *ibid.* XIII. *Musophilus, containing a general Defence of Learning*. Printed with the *Epistles*, &c. (13). It is addressed *To the Right worthy and judicious Favourer of Virtue, Mr. Fulke Grevil*. XIV. *Various Sonnets to Delia* (14). They are fifty-seven in number. XV. *An Ode*. XVI. *A Pastoral*. XVII. *A Description of Beauty, translated out of Marino*. XVIII. *To the Angel Spirit of the most excellent Sir Philip Sydney*. XIX. *To the Right Reverend Father in God James Montague, Bishop of Winchester* (15). *A Defence of Rhime*. Lond. 1611, 8vo. (16). The title, at length, is; *A Defence of Rhime, against a Pamphlet, intituled, Observations on the Art of English Poesy: wherein is demonstratively proved, that Rhime is the fittest Harmony of Words, that comports with our Language*. It is dedicated *To all the worthy Lovers and learned Professors of Rhime within his Majesty's Dominions*; and it is addressed to his patron, *William Herbert Earl of Pembroke*. This piece is in prose. All these pieces are published together, in two volumes, 12mo. under the title of *The Poetical Works of Mr. Samuel Daniel, author of the English History*. London, 1718. We must not omit the praises bestowed on Mr. Daniel, as a Poet, by contemporary writers; one of whom, in a copy of verses on the *Time Poets* (17), styles him

(14) *Ibid.*

(15) Poetical Works, &c. vol. ii. p. 418, &c.

(16) Wood, *ibid.*

(17) See *Choice Drollery*, in 8vo. Lond. 1636, p. 6.

The pithy *Daniel*, whose salt lines afford
A weighty sentence in each little word.

Another author, in a copy called *A Censure of the Poets* (18), speaks of him thus:

(18) See *Sportive Wit*, 8vo. p. 70.

Amongst these *Samuel Daniel*, whom I
May speak of, but to censure do deny:
Only have heard some wise men him rehearse
To be too much Historian in verse.
His rhimes were smooth, his metres well did close;
But yet his manner better fitted prose.

His good friend Mr. Charles Fitz-Geoffry wrote the following Latin epigram in his praise (19):

(19) *Vide Epigr. in 8vo. Oxon. 1601.*

Spenserum si quis nostrum velit esse Maronem,
Tu, Daniele, mihi Naso Britannus eris.
Sin illum potius Phæbum velit esse Britannum,
Tum, Daniele, mihi tu Maro noster eris.
Nil Phæbo ulterius; si quid foret, illud haberet
Spenserus, Phæbus tu, Daniele, foret.
Quippe loqui Phæbus cuperet si more Britanno,
Haud scio quo poterat, ni velit ore suo.

If Spenser merits Roman Virgil's name,
Daniel, at least, comes in for Ovid's fame.
If Spenser rather claims Apollo's wit,
Virgil's illustrious name will Daniel fit.
No higher than Apollo we can go:
But, if a loftier title you can show,
That greater name let Spenser's Muse command,
And Daniel be the Phæbus of our land.
For, in my judgment, if the god of verse
In English wou'd heroic deeds rehearse,
No language so expressive he cou'd chuse,
As that of English Daniel's lofty Muse.

We come now to consider Mr. Daniel as an *Historian*, in which capacity he wrote: *The First Part of the History of England, in three Books*. London, 1613, 4to. reaching to the end of King Stephen. To which he afterwards added a *Second Part*, reaching to the end of King Edward III. London, 1618, 1621, 1623, and 1634. This History was continued to the end of King Richard III. by John Trussell, a Trader and Alderman of the city of Winchester (20). Of Mr. Daniel's History a certain writer (21) gives this character: 'It is written with great brevity and politeness; and his political and moral Reflections are very fine, useful, and instructive.' Mr. Langbaine takes it to be the *Crown* of all our author's Works (22); and Dr. Fuller tells us (23), 'he was a judicious Historian; witness his Lives of our English Kings, since the conquest, until King Edward the Third; wherein he hath the happiness to reconcile brevity with clearness, qualities of great distance in other authors.' Dr. Heylin (24), speaking of the chief Historians of this nation, has these words: *And, to end the bead-roll, Half the story of this realm done by Mr. Daniel, of which I believe that which himself saith of it in his Epistle to the reader, that there was never brought together more of the main.* To conclude the character of this performance, I shall transcribe what Dr. Kennet says of it (25). 'Mr. Daniel's History follows next, containing the reigns of William I. and II. Henry I. King Stephen, Henry II. Richard I. King John, Henry III. Edward I. II. and III. The author had a place at Court in the reign of King James I. and seems to have taken all the refinement a Court could give him. It is said, he had a good vein in Poetry, and it is certain he has shewn great judgment in keeping it, as he did, from infecting his prose, and destroying that simplicity, which is a principal beauty in the stile of an Historian. His narration is smooth and clear, and carries every where an air of good sense and just eloquence; and his English is much more modern than *Milton's*, though he lived before him. But Mr. *Milton* chose to write

and Poetry (c) under the encouragement and patronage of the Earl of Pembroke's family [B]. Afterwards he became Tutor to the Lady Anne Clifford [C], and, upon the death of the famous Spenser, was appointed Poet Laureat to Queen Elizabeth. In King James's reign, he was made Gentleman Extraordinary, and afterwards one of the Grooms of the Privy Chamber to the Queen Consort, who took great delight in his conversation and writings (d). He rented a small house and garden in Old-street near London, where in private he composed most of his Dramatic Pieces (e). Towards the end of his life, he retired to a farm, which he had at Beckington near Philips-Norton in Somersetshire (f), where, after some time spent in the enjoyment of the Muses and religious contemplation, he died, and was buried [D], in the year 1619 (g). He left no issue by his wife Justina, to whom he was married several years (h).

(g) Wood, *ubi*
supra, col. 448.

' (if the expression may be allowed) a hundred years backwards; whereas it is particularly to be admired how Mr. Daniel could, so long ago, express himself with the same purity and grace as our most sensible writers do now, though we flatter ourselves, that we have considerably improved the language.'

[B] — under the encouragement and patronage of the Earl of Pembroke's family.] This may be gathered from a hint in his *Defence of Rhime*, dedicated to William Herbert Earl of Pembroke. For, addressing himself to that Lord, he says (26): 'We are told, how that our measures go wrong, all rhiming is gross, vulgar, barbarous; which if it be so, we have lost much labour to no purpose; and for my own particular, I cannot but blame the fortune of the times, and my own genius, that cast me upon so wrong a course, drawn with the current of custom, and an unexamined example: Having been first encouraged and framed thereunto by your most worthy and honourable Mother, and received the first notion for the formal ordering of those compositions at Wilton, which I must ever acknowledge to have been my best school, and thereof always am to hold a feeling and grateful memory. Afterwards, drawn farther on by the well-liking and approbation of my worthy Lord, the fosterer of me and my Muse, I adventured to bestow all my whole powers therein, perceiving it agreed so well, both with the complexion of the times, and my own constitution.'

[C] He was Tutor to the Lady Anne Clifford.] This we learn from his epitaph (27). By the way it must be noted, that this Lady Anne, afterwards Countess of Pembroke, was the same person, who lived like a Princess, for many years after our author's death, in Westmorland; was a great lover and encourager of learning and learned men, hospitable, charitable to the poor, and of a most generous and public spirit. She died the 22d of March, 1675, aged 87, and was buried under a stately monument in the church of Appleby, in Westmorland (28).

[D] — was buried.] On the wall over his grave is this inscription (29): *Here lies, expecting the second coming of our Lord and Saviour Jesus Christ, the dead body of Samuel Daniel, Esq; that excellent Poet and Historian, who was Tutor to the Lady Anne Clifford in her youth, she that was daughter and heir to George Clifford Earl of Cumberland; who in gratitude to him erected this monument to his memory, a long time after, when she was Countess Dowager of Pembroke, Dorset, and Montgomery. He died in Octob. an. 1619.* B.

*. [The writers of the *Biographia Dramatica* have remarked, that there is an evident confusion in the account which some authors have given of Mr. Daniel's Life. But the confusion is solely owing to a blunder of Langhaine's that is flagrantly absurd. Langhaine, after stating the time of Mr. Daniel's birth and death in the same manner as is done in the article above, unaccountably adds, that he lived to fourscore years of age. This gross mistake has been copied by Gildon and Jacob (30).

Mr. Granger observes, on Samuel Daniel's having succeeded Spenser as Poet-Laureat to Queen Elizabeth, that he was then thought to have merited the Laurel. "His prose," adds Mr. Granger, "has much more simplicity and elegance than is to be found in the generality of the writers of his

age; but his poetry is too prosaic to gain many admirers in the present (31)." It appears, from the lines quoted in note [A], that the same objection was made to him by some of his contemporaries.

Mr. Headley, in the *Biographical Sketches* prefixed to his "Select Beauties of ancient English Poetry," has given the most accurate estimate that has yet been formed of Daniel's poetical character. Speaking of the dialogue between Ulysses and the Syren, in one of our author's plays, and which he acknowledges to be only neat and unaffected, he adds:

"But Daniel has a right to the merit of still higher excellence. Though very rarely sublime, he has skill in the pathetic, and his pages are disgraced with neither pedantry nor conceit. We find, both in his poetry and prose, such a legitimate and rational flow of language as approaches nearer the style of the 18th than the 16th century, and of which we may safely assert, that it will never become obsolete. He certainly was the Atticus of his day. It seems to have been his error to have entertained too great a diffidence of his own abilities. Constantly contented with the sedate propriety of good sense, which he no sooner attains than he seems to rest satisfied, though his resources, had he but made the effort, would have carried him much farther. In thus escaping censure, he is not always entitled to praise. From not endeavouring to be great, he sometimes misses of being respectable. The constitution of his mind seems often to have failed him in the sultry and exhausting regions of the Muses; for, though generally neat, easy, and perspicuous, he too frequently grows slack, languid, and enervated. In perusing his long historical poem we grow sleepy at the dead ebb of his narrative, notwithstanding being occasionally relieved with some touches of the pathetic. Unfortunate in the choice of his subject, he seems fearful of supplying its defects by digressional embellishment. Instead of fixing upon one of a more fanciful cast, which the natural coolness of his judgement would necessarily have corrected, he has cooped himself up within the limited and narrow pale of dry events: instead of casting his eye on the general history of human nature, and giving his genius a range over her immeasurable fields, he has confined himself to an abstract diary of Fortune: instead of presenting us with pictures of Truth from the effects of the Passions, he has verified the truth of action only. He has sufficiently, therefore, shewn the historian, but by no means the poet. For, to use a sentiment of Sir Wm. Davenant's, "Truth narrative and past is the idol of historians (who worship a dead thing,) and truth operative, and by its effects continually alive, is the mistress of poets, who hath not her existence in matter but in reason." Daniel has often the softness of Rowe without his effeminacy. In his *Complaint of Cleopatra* he has caught Ovid's manner very happily, as he has no obscurities either of style or language, neither pedantry nor affectation, all of which have concurred in banishing from use the works of his contemporaries. The oblivion he has met with is peculiarly undeserved: he has shared their fate, though innocent of their faults. Daniel enjoyed the friendship and the praises of the most eminent men of his age (32)."

We shall insert one of the specimens which Mr. Headley, in his collection, has produced of Daniel's poetical talents. It is the description of Richard the Second, the morning before his murder in Pomfret Castle.

"Whether

Whether the soul receives intelligence
By her near Genius, of the body's end,
And so imparts a sadness to the sense,
Foregoing ruin, whereto it doth tend;
Or whether Nature else hath conference
With profound sleep, and so doth warning send
By prophetizing dreams, what hurt is near,
And gives the heavy careful heart to fear:

"However, so it is; the now sad King
(Toss'd here and there, his quiet to confound)
Feels a strange weight of sorrows gathering
Upon his trembling heart, and sees no ground;
Feels sudden terror bring cold shivering:
Lifts not to eat; still muses; sleeps unbound:
His senses droop, his steady eyes unquick;
And much he ails, and yet he is not sick.

"The morning of that day which was his last,
After a weary rest rising to pain,
Out at a little grate his eyes he cast
Upon those bord'ring hills, and open plain,
And views the Town, and sees how people pass'd;
Where others liberty makes him complain
The more his own, and grieves his soul the more;
Conferring captive crowns, with freedom poor.

"O happy Man, saith he, that lo I see
Grazing his cattle in those pleasant fields!
If he but knew his good, (how blessed he
That feels not what affliction greatness yields!)
Other than what he is he would not be,
Nor change his state with him that sceptres wields.
Thine, thine is that true Life—that is to live,
To rest secure, and not rise up to grieve.

"Thou sitt'st at home safe by thy quiet fire,
And hear'st of others harms, but feelest none;
And there thou tell'st of Kings, and who aspire,
Who fall, who rise, who triumph, who do moan.
Perhaps thou talk'st of me, and dost enquire
Of my restraint, why here I live alone;
And pitiest this my miserable fall:
For pity must have part: envy not all.

"Thrice happy you, that look as from the shore,
And have no venture in the wreck you see;
No int'rest, no occasion to deplore
Other mens travels, while yourselves sit free.
How much doth your sweet rest make us the more
To see our misery, and what we be!
Whose blinded greatness ever in turmoil,
Still seeking happy life, makes life a toil.

"Great Dioclesian (and more great therefore,
For yielding up that whereto Pride aspires)
Reck'ning thy gardens in Illyria more
Than all the Empire, all what th' Earth admires;
Thou well didst teach, that he is never poor
That little hath, but he that much desires;
Finding more true delight in that small ground,
Than in possessing all the Earth was found.

Are Kings (that freedom give) themselves not free,
As meaner men, to take what they may give!
What! are they of so fatal a degree,
That they cannot descend from that, and live?
Unless they still be Kings, can they not be?
Nor may they their authority survive?
Will not my yielded crown redeem my breath?
Still am I fear'd?—is there no way but death (33)?" (33) *Ibid.* 111

With regard to Daniel's dramatic pieces, it is observed, in the *Biographia Dramatica*, that they are not equal to some other of his poetical works, and still less so to his histories, which are yet held in very high estimation. His tragedy, however, of *Cleopatra* was greatly esteemed in its time; and there is an edition of it in 1623, in which the author has made various alterations, much to its advantage. Both in this Tragedy and in his *Philotas*, Mr. Daniel has shewn great judgment, by treading in the steps of the ancients in the modelizing of his fable, and the conduct of his morals; two circumstances of principal importance, though frequently disregarded (34).

K.

DANVERS (HENRY), a brave warrior in the end of the sixteenth, and beginning of the seventeenth century; and created Earl of Danby by King Charles I. was the second son of Sir John Danvers, Knight [A], by Elizabeth his wife, daughter and coheir to John Nevil the last Lord Latimer (a). He was born at Dantesey in Wiltshire, on the 28th day of June, 1573. After an education suitable to his birth, he went and served in the Low-Country wars, under Maurice Count of Nassau, afterwards Prince of Orange; and was engaged in many military actions of those times, both by sea and land. He was made a Captain in the wars of France, occasioned in that kingdom by the League; and there knighted for his good service under Henry IV. King of France. Next, he was employed in Ireland (b), as Lieutenant-General of the Horse, and Serjeant-Major of the whole Army, under Robert Earl of Essex, and Charles Baron of Montjoy, in the reign of Queen Elizabeth (c). Upon the accession of King James I. he was, on account of his family's deserts and sufferings [B], advanced, the twenty-first of July, 1603, to the dignity of a Peer of this realm, by the title of Baron of Dantesey (d): and in 1605, by a special act of Parliament, restored in blood, as heir to his father, notwithstanding the attainder of his elder brother, Sir Charles Danvers, Knight (e). Moreover, he was appointed Lord President of Munster in Ireland (f): and in 1620 made Governor of the Isle of Guernsey, for life (g). By King Charles I. he was created Earl of Danby (h), on February 5, 1625-6; and made of his Privy-Council; and Knight of the Order of the Garter (i). Being himself a man of learning, as well as a great encourager of it; and observing that opportunities were wanting in the University of Oxford for the useful study

[A] Was the second son of Sir John Danvers, Knt.] That family was originally of *Anvers* or *Antwerp*, as their surname implies. The greatest accession to their honour and fortune (1), came by the marriage of Sir John Danvers with Elizabeth, the youngest daughter, and one of the co-heiresses to John Lord Latimer: Whose three other daughters, were, Catherine, wife of Henry Earl of Northumberland; Dorothy, wife of Tho. Cecill, the first Earl of Exeter; and Lucy, wife of Sir William Cornwallis, Knt. (2). Sir Henry Danvers's elder brother, was Sir Charles Danvers, Knt. who adhering to Robert Earl of Essex, in his disloyal designs against the Court, fell a sacrifice to

(1) See Camden's *Britannia*, edit. 1722. fol. col. 920.

the Cecilian faction, and was attainted of high-treason, and beheaded in 1601 (3). The reader is to observe, that this family's surname is sometimes written *Danvers*, and sometimes *Davers* (4).

[B] On account of his family's deserts and sufferings.] For, both the Earl of Essex, Sir Charles Danvers, and the rest that then suffered, were thought to have fallen a sacrifice to the King of Scots succession; and the Earl of Essex was considered by King James I. as his martyr (5).

of Botany, he purchased a piece of ground by the river Charwell, opposite to Magdalen-College; which he encompassed with a curious wall of square polished stone, and replenished with a great variety of plants and herbs proper for the study of Physic and Botany [C]. He founded also an Alms-house, and a Free-school, at Malmesbury in Wiltshire (k). In his latter days he chose a retired life; and (upon what account is not well known) fell under the displeasure of the Court [D]. At length, he died at his house in Cornbury Park in Oxfordshire, January the 20th, 1643-4, in the seventy-first year of his age: and was buried in the Chancel of the Parish-church of Dantesey, under a noble monument of white marble, with an epitaph [E], which contains the best character that can be given of him. He was never married (l).

His younger brother and heir, was Sir John Danvers, Knight, one of the Gentlemen of the Privy-Chamber to King Charles I. who was so ungrateful and inhuman, as to sit in judgment upon his gracious Master, that unfortunate Prince, and to be one of those who signed the warrant for his execution. He died before the Restoration of King Charles II. but, however, all his estates both real and personal were confiscated in 1661 (m). His character is given below [F].

[C] *Proper for the study of Physick and Botany.* In order to put this noble design in execution, he purchased for the sum of two hundred and fifty pounds, five acres of ground, in the place mentioned above; which had formerly served for a burying place to the Jews (residing in great numbers at Oxford, till they were expelled England by King Edward I. in 1290). His right and title to that piece of land, he conveyed to the University, on the 27th of March, 1622. And the ground being first considerably raised, to prevent its being overflowed by the river Charwell; the Heads of the University laid the first stones of the walls, on the 25th of July following. They were finished in 1633, being fourteen foot high: and cost the noble benefactor about five thousand pounds. The entrance into the garden, is on the north side under a stately gate, the charge of building which amounted to between five and six hundred pounds. Upon the front of that gateway, is this Latin inscription: *Gloria Dei Opt. Max. Honori Caroli Regis, in usum Acad. et Reipub. Henricus Comes Danby, D. D. MDCXXXII. i. e.* 'To the Glory of God, and the Honour of King Charles, for the use of the University and the Kingdom, Henry Earl of Danby gives and dedicates [this Garden.]' For the maintenance of it, and of a Gardener, the noble founder left, by Will, the impropriate rectory of Kirkdale in Yorkshire: which was afterwards settled for the same purpose, by his brother and heir, Sir John Danvers, Knt. The Earl of Danby's Will bore date the 14th of December, 1640 (6).

[D] *Fell under the displeasure of the Court.* For, he was fined five thousand pounds in the Star-Chamber, for having felled timber in Wichwood-forest, without licence (7). This was such a severe punishment, as would not have been inflicted upon him, had he been in the good graces of the Court.

[E] *With an epitaph.* Being as follows: 'Henry Earl of Danby, second son to Sir John Danvers, Knight, and Dame Elizabeth, daughter and coheir to John Nevil Lord Latimer; born at Dauntsey, in the county of Wiltshire, the 28th day of June, Ann. Dom. 1573, and baptized in this church, the first of July following, being Sunday. He departed this life on the Twentieth day of January, Ann. Dom. 1643, and lyeth here interred. He was partly bred up in the Low-Country-wars, under Maurice E. of Nassau (afterwards Prince of Orange) and in many other military actions of those times both by sea and land. He was made a Captain in the wars of France, and there knighted for

his good service, under Henry the Fourth, then French King. He was employed as Lieutenant-General of the Horse, and Serjeant-Major of the whole army in Ireland, under Robert Earl of Essex, and Charles Baron of Montjoy, in the reign of Queen Elizabeth. He was made Baron of Dauntsey, and Peer of this realm, by King James the First; and by him made Lord President of Munster, and Governor of Garnesey. By King Charles the First, he was created Earl of Danby; made of his Privy Council, and Knight of the most noble Order of the Garter. But, declining more active employments, in his later time (by reason of his imperfect health;) full of honour, wounds, and dayes, he died at his house, in Cornbury Park, in the county of Oxford, in the 71 year of his age (8).'

Laus Deo.

Sacred marble, safely keep
His dust, who under thee must sleep,
Untill the years again restore
Their dead, and time shall be no more.
Meane while, if he (which all things wears)
Does ruine thee; or if thy tears
Are shed for him: dissolve thy frame,
Thou art requited: for his fame,
His vertue, and his worth, shall be
Another monument to thee.

G. Herbert.

[F] *His character is given below.* From the Lord Clarendon (9), who delivers it in the following words: 'The other (10) was Sir John Danvers, the younger brother and heir of the Earl of Danby, who was a Gentleman of the Privy-Chamber to the King, and being neglected by his brother, and having, by a vain expence in his way of living, contracted a vast debt, which he knew not how to pay, and being a proud formal weak man, between being seduced and a seducer, became so far involved in their counsels, that he suffered himself to be applied to their worst offices, taking it to be a high honour to sit upon the same bench with Cromwell, who employed and contemned him at once: nor did that party of miscreants look upon any two men in the kingdom with that scorn and detestation as they did upon Danvers and Mildmay.'

M.

DAVENANT (JOHN), Bishop of Salisbury in the seventeenth century, was born in Watling-street, London, where his father was an eminent Merchant, but originally descended from the antient family of the Davenants of Sible-Heningham in Essex (a) [A]. What school he was educated in, we cannot find. But, on the fourth of July, 1587, he was admitted Pensioner of Queen's College in Cambridge (b). He regularly

[A] *Descended from the antient family of the Davenants of Sible Heningham in Essex.* And of Davenant's-lands in that parish; where his father was

born, and his ancestors had continued in a worshipful degree from Sir John Davenant, who lived in the time of King Henry the Third (1).

(b) From the College Register. It does not appear by it that he was admitted a Fellow-Commoner, as T. Fuller affirms. *Ib.*

took his degrees in Arts; that of Master in 1594 (c). A Fellowship was offered him about the same time; but his father would not permit him to accept of it on account of his plentiful fortune: however, after his father's decease, he accepted of one (d), into which he was admitted September 2, 1597 (e). Being thus settled in the College, he distinguished himself, as he had already done before [B], by his learning and other excellent qualifications (f). In the year 1601 he took his degree of Bachelor of Divinity: and that of Doctor in 1609 (g). This same year last-mentioned he was elected Lady Margaret's Professor, which place he enjoyed till 1621 (h). He was also one of her Preachers in 1609 and 1612. On the 20th of October 1614, he was admitted Master of his College, and continued in that station till April 20, 1622 (i). And so considerable did he become, that he was one of those eminent English Divines, sent by King James I. to the Synod of Dort, in the year 1618 [C]. He returned to England in May 1619 (k), after having visited the most eminent cities, and other remarkable places, in the Low-Countries (l). Upon the death of his brother-in-law Dr. Robert Townson, he was nominated Bishop of Salisbury; and was elected June 11, 1621, confirmed November 17 following, and consecrated the 18th of the same month (m). He continued in favour during the remainder of King James the First's reign: but in Lent 1630-1, he incurred the Court's displeasure, for meddling (in a Sermon preached before the King at Whitehall) with the predestinarian controversy [D]; "all curious search" into which, his Majesty had strictly enjoined "to be laid aside (n)." For this pretended contempt of the King's Declaration, he was not only reproved, the same day; but also summoned to answer, two days after, before the Privy Council. And though he was dismissed without farther trouble, and even admitted to kiss the King's hand [E], yet he was never afterwards in favour at Court (o). He died of a consumption April 20, 1641 (p), to which a sense

[B] He distinguished himself, as he had already done before.] In his youthful exercises, he gave such an earnest of his future maturity, that Dr. Whitacre hearing him dispute, said, 'That he would in time prove the honour of the University; a prediction that proved not untrue, as T. Fuller observes (2).

(2) Fuller, *ubi supra*.

[C] He was one of those eminent English Divines, sent by King James I. to the Synod of Dort, in the year 1618.] The others were, George Carleton, D. D. then Bishop of Landaff, and afterwards of Chichester; Joseph Hall, D. D. then Dean of Worcester, and afterwards Bishop of Exeter and Norwich; and Samuel Ward, D. D. Master of Sidney-College, Camb. and Archdeacon of Taunton. [But the air not agreeing with Dr. Hall, he obtained leave to return to England about Christmas, and Thomas Goade, D. D. was sent in his room (3).] They embarked Octob. 17 (4), landed at Middleburgh the 20th; came to the Hague the 27th of the same month; and thence removed to Dort, where the Synod was opened November 3, O. S. and ended April 29 (5). They came back to England May 7 (6). During their stay in Holland, these four Divines had ten pounds a day allowed them by the States; and a present of two hundred pounds, at their departure, for their charges; besides a golden medal, to each of them, whereon was represented the Synod sitting (7).

[D] For meddling (in a Sermon preached before the King at Whitehall) with the Predestinarian controversy.] As soon as his Sermon was ended, it was signified to him, That his Majesty was much displeased, that he had stirred this question, which his Majesty had forbidden to be meddled withal, one way or other: the Bishop's answer was, That he had delivered nothing, but the received doctrine of our Church, established in the 17th Article, and that he was ready to justify the truth of what he had then taught. He was told, The doctrine was not gain-said, but his Majesty had given command, these questions should not be debated, and therefore he took it more offensively that any should be so bold, as in his own hearing to break his royal commands. To this he replied, That he never understood his Majesty had forbidden the handling of any doctrine comprised in the Articles of our Church, but only raising of new questions, or adding of new sense thereunto, which he had not done, nor ever should do. Two days after, when he appeared before the Privy-Council, Dr. Sam. Harfnet, Archbishop of York, made a speech nearly half an hour long, aggravating the boldness of Bishop Davenant's offence, and shewing many inconveniences that it was likely

to draw after it. When the Archbishop had finished his speech, the Bishop desired, That since he was called thither as an offender, he might not be put to answer a long speech upon the sudden, but that his Grace would be pleased to charge him point by point, and so to receive his answer; for he did not yet understand wherein he had broken any commandment of his Majesty's, which was taken for granted. After some pause, the Archbishop told him, He knew well enough the point which was urged against him, namely the breach of the King's declaration. Then he stood upon this defence, That the doctrine of Predestination which he taught, was not forbidden by the Declaration: 1st. Because in the Declaration all the Articles are established, amongst which, the Article of Predestination is one. 2. Because all Ministers are urged to subscribe unto the truth of the Article, and all subjects to continue in the profession of that as well as of the rest. Upon these and such like grounds, he gathered, that it could not be esteemed amongst forbidden, curious, or needless doctrines; and here he desired that out of any clause in the Declaration it might be shewed him, that keeping himself within the bounds of the Article, he had transgressed his Majesty's command; but the Declaration was not produced, nor any particular words in it: only this was urged, That the King's will was, that for the peace of the Church these high questions should be forborne. He added, That he was sorry he understood not his Majesty's intention; which if he had done before, he should have made choice of some other matter to treat of, which might have given no offence; and that for the time to come, he should conform himself as readily as any other to his Majesty's command; whereupon he was dismissed. At his departure, he entreated the Lords of the Council, to let his Majesty understand, that he had not boldly, or wilfully and wittingly, against his Declaration, meddled with the forenamed point; and that now understanding fully his Majesty's mind, and intention, he should humbly yield obedience thereunto (8).

[E] And even admitted to kiss the King's hand.] When he came into the royal presence, his Majesty declared to him his resolution, That he would not have this high point meddled withal or debated, either the one way or the other, because it was too high for the people's understanding; and other points which concern reformation and newness of life, were more needful and profitable. The Bishop promised obedience therein, and so kissing his Majesty's hand departed (9).

of the sorrowful times, that he saw were bad, and foresaw would be worse, did not a little contribute (q). Among other benefactions, he gave to Queen's College in Cambridge, the perpetual Advowsons of the Rectories of Cheverel Magna, and Newton Tony in Wiltshire; and a Rent-charge of thirty-one pounds ten shillings *per annum*, for the founding of two Bible-Clerks, and buying books for the library, in the same College (r). We shall give an account of what he published in the note [F]. As to his character; He was humble, and hospitable; painful in preaching and writing; and behaved in every station with exemplary gravity and moderation (s). He was a man of great learning, and an eminent Divine (t); but strictly attached to Calvinism, with all its absurdities of unconditionate Predestination, &c. Whilst he was at the Synod of Dort, he inclined to the doctrine of Universal Redemption; and was for a middle way between the two extremes, maintaining The Certainty of the Salvation of a certain number of the Elect; and that offers of pardon were sent not only to all that should believe and repent, but to all that heard the Gospel: that Grace sufficient to convince and persuade the impenitent (so as to lay the blame of their condemnation upon themselves) went along with these offers; that the Redemption of Christ and his Merits were applicable to these; and consequently there was a possibility of their Salvation (u). He was buried in Salisbury Cathedral.

[F] *We shall give an account of what he published.* I. A Latin Exposition on St. Paul's Epistle to the Colossians. *Expositio Epistolæ D. Pauli ad Colossenses, per Reverendum in Christo Patrem Joannem Sarisburiensem Episcopum in lucem edita: Olim ab eodem, Dominae Margaretae in Academia Cantabrigiensi Professore Theologico, dictata*, fol. The third edition was printed at Cambridge in 1639. It is the substance of Lectures read by our author as Lady Margaret Professor. So was also the following; II. *Praelectiones de duobus in Theologia controversis Capitibus: De Jure Controversiarum, primo; De Justitia habituali & actuali, altero: Per Reverendissimum Virum Joan. Davenantium, S. Theol. Doctorem (nunc Episcopum Sarisburiensem) ante aliquot annos in celeberrima Academia Cantabrigiensi*

Theologiae professorem pro Domina Margareta, in Scholis Theologicis auditoribus suis dictatae. Cantab. 1631, fol. i. e. Lectures on the two controverted points, 1. The Judge of controversies; 2. Habitual and actual Righteousness, &c. III. In 1634, he published the Questions, which he had disputed upon in the schools, 49 in number, under this title, *Determinationes Quæstionum quarundam Theologicarum, per Reverendissimum Virum Joannem Davenantium, &c.* fol. IV. The last thing he published, was, 'Animadversiones upon a treatise lately published and intitled, 'God's Love to Mankind, manifested by disproving his absolute Decree for their Damnation.' Cambr. 1641, 8vo. This treatise was written by S. Hoard.

M.

D'AVENANT or DAVENANT (WILLIAM), Poet-Laureat in the reigns of Charles the First and Charles the Second. He was the younger son of an honest citizen of Oxford, one Mr. John Davenant, who kept that which was afterwards the Crown-Tavern there, and was a person of a very grave disposition, as well as unblemished reputation (a). William Davenant, of whom we are to speak, was born in the latter end of the month of February 1605, and, on the third of March following, was christened at St. Martin's Church, in which parish his father's house stood (b). While he was a child he was very much taken notice of for his brisk and lively parts, and for his early inclination to letters, more especially to Poetry, hinted by some, and asserted by others, to have been owing to some very singular accidents, as to which it may not be amiss to enter into a few particulars, though the reports themselves deserve but little credit (c). [A]. He received the first rudiments of polite learning from Mr. Edward Sylvester, who

(c) Winstanley's Lives of English Poets, p. 185.

kept,

[A] *Deserve but little credit.* We are obliged to Mr. Wood for a double account of this celebrated Poet. In his Latin work, which was translated for him, and is thought sometimes to express the sentiments also of Dr. Fell, under whose auspice that translation was performed; there is a succinct account of the different humours of John Davenant the father, and William Davenant the son (1). But in Mr. Wood's English History of Oxford writers, we have his sentiments a little more at large; for, having told us who his father was, and that the tavern he kept was afterwards known by the sign of the Crown, he proceeds thus (2): 'His mother was a very beautiful woman, of a good wit and conversation, in which she was imitated by none of her children, but by this William. The father, who was a very grave and discreet citizen (yet an admirer and lover of plays and play-makers, especially Shakespeare, who frequented his house in his journies between Warwickshire and London) was of a melancholic disposition, and was seldom or never seen to laugh, in which he was imitated by none of his children, but by Robert his eldest son, afterwards Fellow of St. John's college, and a venerable Doctor of Divinity.' That there is somewhat of mystery in this account, and more especially in the parenthesis relating to Shakespeare, the

reader will easily discern; but whether a modern writer has truly interpreted Mr. Wood's meaning, must be left to the reader's judgment (3). 'His father's house, says Mr. Jacob, being frequented by the famous Shakespeare in his journies to Warwickshire, his poetical genius in his youth, was, by that means, very much encouraged, and some will have it, that the handsome landlady, as well as the good wine, invited the Tragedian to those quarters.' Thus much is certain, that our author admired Shakespeare more than any English Poet, and that one of the first essays of his muse was a poem upon his death, which happened when Davenant was about ten years old. The reader perhaps will not be displeased to see it (4).

(2) *Atb. Oxon.* vol. ii. col. 411.

kept, at that time, a grammar-school in the parish of All Saints in Oxford (*d*), where he was so happy as to breed up several persons, who, afterwards, became eminent for their learning and abilities. In the year 1621, the same in which his father was Mayor of the city, he was entered a member of the University of Oxford in Lincoln-College, under the tuition of Mr. Daniel Hough (*e*): but the Oxford Historian is of opinion, that he did not stay there long (*f*), but, being strongly affected to lighter studies, and perhaps encouraged by some of the young Noblemen and Gentlemen with whom he became acquainted there, he quitted the seat of the Muses, in hopes of making his fortune at Court, where he became first Page to Frances Duchefs of Richmond, a Lady very famous in those days, who had a great influence at Court, and who kept a kind of court of her own (*g*). He afterwards removed into the family of Sir Fulk Grevile Lord Brooke, who being himself a man of parts and learning, and much addicted to Poetry, he stood very high in his favour, and might, very probably, have made a figure in the world under his patronage, if that noble Peer had not been suddenly deprived of life by the hands of a barbarous assassin, September 30th, 1628 (*h*). By this unfortunate accident Mr. Davenant was left quite at large, but, however, without any detriment to his fortune, since we find that the year ensuing he produced his first play to the world, which was very well received, and to which some very honourable recommendations were prefixed when it was printed [*B*]. He spent the next eight years of his life in a constant attendance upon the Court, where nobody was better received, or more highly careffed, being particularly intimate with Thomas Carew, Esq; Endymion Porter, Esq; Sir John Suckling, Mr. Henry Jermyn, the Honourable Henry Howard, and, in a word, with all the great wits of that time: nor was he less regarded by the Earl of Dorset, the Lord Treasurer Weston, and other great men (*i*), notwithstanding an unlucky accident that did no small injury to his handsome face, which the Oxford Historian assures us, arose from his familiarity with a handsome black girl in Axe-yard, in Westminster (*k*), and which exposed him to a good deal of raillery [*C*]. In this space of time he wrote several plays, and many more poems, which

II.

Each tree, whose spreading growth hath made
Rather a night beneath than shade,
(Unwilling now to grow)
Looks like the plume a Captain wears,
Whose rifled falls are steeped with tears,
Which from his last rage flow.

III.

The pitious river wept itself away,
Long since (alas! to such a swift decay,) *[B]*
That reach the map and look,
If you a river there can spie,
And for a river your mock'd eye,
Will find a shallow brook.

Will Dav'nant asham'd of a foolish mischance,
That he had got lately trav'ling in France;
Modestly hop'd th' handsomeness of 's muse,
Might any deformity about him excuse.

Surely the company had been content,
If they could have found any precedent;
But in all their records, in verse or in prose,
There was none of a Laureat who wanted a nose.

And, as if this had been a jest that could never die,
in a poem written some years after with the same
title, there was another bold stroke at poor Sir Wil-
liam Davenant's disfigured visage, but with more of
ill nature, and much less of wit in it (*10*).

[B] Were prefixed when it was printed. The title
of this first dramattick piece of our author's runs
thus:

I. ALBOVINE *King of the Lombards, his Tragedy*,
Lond. 1629, 4to.

This work is founded upon true History, and our
author seems to have drawn his materials both from
antient and modern writers (*5*). He imitates Shake-
speare in many places, and copies him in some. Mr.
Langbaine says it was dedicated to the Right Ho-
nourable the Duke of Somerset (*6*), in which strange
mistake he is followed by later writers; but the Play
itself plainly proves, that it was addressed to the un-
fortunate Robert Ker, Earl of Somerset (*7*); and it
is very evident from thence, that this Nobleman was
not so little considered under his misfortunes as is
generally imagined. It was justly esteemed a very
good first Play, and as such is commended to the
world by eight copies of verses, all written by emi-
nent men, of whom we will mention three, Sir
Henry Blount, Edward Hyde, afterwards Earl of
Clarendon, and the Honourable Henry Howard.

[C] To a good deal of raillery. The plain fact is,
that Mr. Davenant, being very amorous, was so un-
lucky as to carry the tokens of his irregular gallan-
tries in the depression of his nose, which afforded the
satyrick wits of those times a pregnant subject for a
kind of familiar abuse, which affected him as little,
or perhaps less, than it would any other man (*8*).
This accident happened pretty early in his life, since
it gave occasion to the following stanzas in Sir John
Suckling's *Sessions of the Poets*, which I have tran-
scribed from a very correct copy (*9*).

Damn'd Holden, with's dull German Princess
appear'd,

Whom if Dav'nant begot, as some do suppose,
Apollo said the pillory should crop off his ears,
And make them more suitable unto his nose.

But, what is most extraordinary, Mr. Davenant
himself could not forget the authorefs of his misfor-
tune, but has introduced her into his *Gondibert*, and,
as the Criticks think, a little improperly. He brings
two friends, Ulfinoe the elder, and Goltho the
younger, on a journey to the Court of Gondibert;
but in their passage, to shew, as he would suggest,
the frailty of youth, they were arrested by a very un-
looked-for accident, in spite of the wise counsels
which Ulfinoe had just received from his father (*11*).

For a black beauty did her pride display,
Through a large window, and in jewels shone,
As if to please the world, weeping for day,
Night had put all her starry jewels on.

This beauty gaz'd on both, and Ulfinoe
Hung down his head, but yet did lift his eyes
As if he fain would see a little more,
For much, though bashful, he did beauty prize.

Goltho did like a blushless statue stare,
Boldly her practis'd boldness did out-look,
And ev'n for fear she would mistrust her snare,
Was ready to cry out, That he was took!

She,

which he addressed to the principal persons of the Court, and was also employed in framing several masques, that were acted at court, not only by the principal nobility of both sexes, but one in which even the Queen herself vouchsafed to take a share, though it gave very high offence to the scrupulous moralists of those times (l). By these performances he raised his poetical character to a very great height; most of his pieces, whatever may be thought of them now, being then esteemed the best of their kind, and, as such, highly applauded by those who were thought the ablest judges (m). We shall mention their titles, and a few remarkable particulars that relate to them, in the notes [D]. Upon the death of the justly celebrated Benjamin Johnson, in 1637, our Poet succeeded to his laurel; which gave very high offence to Mr. Thomas May, who was his competitor; and though it was well enough known, that Mr. Davenant owed his preferment to the favour of the Queen, yet his rival carried his spleen still higher, and, from being a warm courtier, became not only a warmer malecontent, but distinguished himself afterwards against his Royal Master, both as an Advocate and an Historian to the Parliament (n). As for Mr. Davenant, he continued very stedfast in his old road, adhered to his old principles, and his old friends, writing from time to time new poems, exhibiting new plays, and having the chief direction and management of the Court diversions, so long as the disorders of those times would permit (o). Of these pieces also we shall say so much as is necessary at the bottom of the page [E]. When the troubles began, Mr. Davenant had an early share in them;

She, with a wicked woman's prosp'rous art,
A seeming modesty, the window clos'd;
Wisely delay'd his eyes, since of his heart
She thought she had sufficiently dispos'd.

E're he could more lament, a little page,
Clean and perfum'd, one whom this Dame did
breed
To guess at ills too manly for his age,
Steps swiftly to him, and arrests his steed:

With civil whisper cries, *My Lady, Sir!*—
At this Goltho alights as swiftly post,
As posterns mount by ling'ring loth to err;
As wind-bound men, whose sloth their first wind
lost.

They enter, and ascend, and enter then
Where DALGA with black eyes does sinners
draw;
And with her voice holds fast repenting men,
To whose warm jet light Goltho is but straw.

Nicely as bridegroom's was her chamber dress'd,
Her bed as bride's, and richer than a throne;
And sweeter seem'd than the Circania's nest,
Though built in Eastern groves of cinnamon.

The price of Princes pleasure, who her love
(Though but false ware) at rates so costly
bought;
The wealth of many, but may hourly prove
Spoils to some one by whom herself is caught.

She, sway'd by sinful beauty's destiny,
Finds her tyrannick pow'r must now expire,
Who meant to kindle Goltho in her eye,
But to her breast has brought the raging fire.

Yet even in simple love she uses art,
Though weepings are from looser eyes but leaks,
Yet eldest lovers scarce would doubt her heart,
So well she weeps, and thus to Goltho speaks.

[D] That relate to them in the notes.] We will in this note give a list of such of his works, as were written within this period, that is, before he was honoured with the title of Poet Laureat, and which, in the judgment of those times, were generally thought to have deserved it.

II. *The JUST ITALIAN*, a Tragi-Comedy, London, 1630, 4to.

This dramattick performance is dedicated to Edward Earl of Dorset, whose favourable opinion of it saved it from the condemnation of a hasty audience. It is introduced by two copies of verses, one written by Mr. William Hopkins, and the other by Mr. Thomas Carew; and it cannot certainly be denied to have

VOL. IV.

much wit, deep contrivance, and a quick succession of busy scenes handsomely expressed. Some of our later Poets, who had read this piece, lost nothing by their reading; and if it were not an invidious task, one might shew where and what they gained.

III. *The CRUEL BROTHER*, a Tragedy, London, 1630, 4to.

This is dedicated to Richard Lord Weston, at that time Lord High Treasurer of England. The author acknowledges, in this Dedication, some errors in the piece itself; and in this, no doubt, the Criticks will allow him a sound judgment: it seems however to have been pretty well received.

IV. *COELUM BRITANNICUM*, a Masque at Whitehall, in the Banqueting-House, on Shrove Tuesday night, the 18th of February 1633.

It was attributed to our author, though the machinery, which was very fine, was contrived and executed by Inigo Jones, and part of the piece itself written by Tho. Carew (12). The King himself wore a mask in this piece, and the rest of the performers were men of the first quality in the three nations (13). This we find omitted in Mr. Langbaine's catalogue.

(12) Athl. Oxon. vol. ii. col. 413.

(13) Sir Wm. Davenant's Works, p. 382.

V. *Triumphs of Prince D'Amour*, a Masque, presented by his Highness at his palace in the Middle Temple the 24th of February 1635, 4to.

This masque, at the request of the honourable society of the Middle Temple, was invented and written by our author in three days, and was presented by the members thereof as an entertainment to the Prince Elector. The musick of the songs and symphonies was composed by Mr. Henry and Mr. William Lawes, his Majesty's servants (14).

(14) Langbaine's English Poets, p. 11.

VI. *Platonick Lovers*, a Tragi-Comedy, London, 1636, 4to.

VII. *The Wits*, a Comedy, London, 1636, 4to. This play is dedicated to our author's true friend, and early patron, Endymion Porter, Esq; one of the Gentlemen of the King's bed-chamber. There is a copy of verses in vindication of it, prefixed by Thomas Carew, Esq. It was favourably received by the publick after it's first performance, in which it ran some risk of being lost, and was for many years acted with great applause.

VIII. *BRITANNIA TRIUMPHANS*, a Masque presented at Whitehall by the King's Majesty and his Lords, on Sunday after Twelfth night, anno 1637, 4to.

This piece is not inserted in Mr. Langbaine's catalogue, or in the folio edition of our author's works, but has been very lately printed in Ireland.

IX. *The TEMPLE of LOVE*, a Masque, presented by the Queen's Majesty and her Ladies at Whitehall.

[E] At the bottom of the page.] Within the space prescribed to this note, his performances were but few:

X. *SALMACIDA SPOLIA*, a Masque, presented to the King and Queen at Whitehall, the 21st of January 1639, London, 1639, 4to.

7 Y

The

them; for he was accused to the Parliament of being embarked in a design in May 1641, for bringing up the army for the defence of the King's person, and the support of his authority, into which he was very probably drawn by his friends, there being many of them deep in this scheme, such as Mr. Henry Piercy, afterwards Lord Piercy, Mr. Goring, Mr. Jermyn, Mr. Ashburnham, Sir John Suckling, and others (p). Most of these, upon the discovery of their design, sought to secure themselves by flight, and Mr. Davenant among the rest; but a Proclamation being published for apprehending him, he was stopped at Feverham, sent up to town, and put into the custody of a Serjeant at Arms (q). In the month of July following he was bailed, and, not long after, finding it expedient to withdraw to France, he had the misfortune to be seized again in Kent, by the Mayor of Canterbury. At last, however, he had the good luck to compleat his intention, and to retire beyond the seas, where he continued for some time (r). But the Queen sending over a considerable quantity of military stores, for the use of the Earl of Newcastle's army, Mr. Davenant (s) came over with them, offered his service to that noble Peer, who was his old friend and patron, and was by him made Lieutenant General of his Ordnance (t), to the no small dislike of some, who thought that a poet very unfit for a Poet; in which, however, they made no great compliment to their General, who wrote poems and plays as well as Mr. Davenant (u). It is very probable, that he took some pains to qualify himself effectually for his duty in that capacity, since, in the month of September, 1643 (w), he received the honour of knighthood from the King, at the siege of Gloucester, as a mark of the satisfaction he took in his services, at a season when he had a very fair opportunity of discovering who they were that deserved that character. His Muse, in the midst of these toils and troubles, sometimes raised her voice, and the same gratitude he had expressed to former patrons, he was inclined to shew to such as protected his fortunes now, some instances of which were made public [F]. It does not appear how he came to leave the northern army, nor have we any accounts of his military services after the time before-mentioned; but, after the King's affairs began to

(15) *Athen. Oxon.*
vol. ii. col. 413.

The subject was set down by our author and Inigo Jones; the invention, ornament, scenes, &c. by the latter, and what was spoken or sung was written by Mr. Davenant, then her Majesty's servant; and the musick composed by Lewis Richard, Master of her Majesty's musick (15). This piece is likewise omitted in Mr. Langbaine's catalogue, and in the collections of Davenant's works, which however is a point of injustice: for though no question can be made that Inigo Jones was a man of exalted genius, yet convincing evidence might be brought to prove, that in matters of this nature few people had a more lively imagination, or a taste more correct, than our author.

It must have been some time within this period, that he published the first edition of his *Miscellaneous Poems*, which I must confess I have never seen, but I am acquainted with their contents from later editions. These consisted of addresses to his patrons and his friends, of new years compliments to the Queen, of prologues and epilogues to his own and other mens plays, and other things of a like nature. It must be confessed, that as a great part of them were written while he was a very young man, so they want this apology to palliate the roughness of some, and the want of ease and perspicuity in others; though in his succeeding works he is not at all liable to this censure. But whatever exceptions may be taken to his poetical character in these juvenile performances, we must allow, that the candour, gratitude, tenderness, friendship, and good nature, expressed in them, make sufficient amends, inasmuch as it plainly proves, that, if we allow for the state of our poetry at that time, he deserved to be admired for his parts. The many amiable qualities of his mind rendered him also very justly beloved.

[F] *Some instances of which were made publick.* It is very probable, that the two following pieces were written some years earlier than they were printed, for it can hardly be supposed, that after Mr. Davenant had fallen so grievously under the displeasure of the Parliament, he could have any great intercourse with his Stationer at London; so that it is more likely, these plays having been formerly acted with applause, were now printed in the absence, though not without the consent, of their author.

XI. *The unfortunate Lovers, a Tragedy*, London, 1643, and again in 1649, 4to.

This tragedy is founded upon an Italian story,

was received very kindly at the time of it's appearance, and was often acted after the Restoration. It is somewhat strange that this should be omitted in Mr. Langbaine's catalogue of our author's works, notwithstanding it is mentioned by Winstanley (16), and which is more in Mr. Langbaine's own catalogue of plays.

XII. *Love and Honour, a Tragi-Comedy*, Lond. 1649, 4to.

The scene is laid in Savoy, and after dramatick entertainments were revived again, Mr. Langbaine assures us, that he has seen this play often acted with applause, at the play-house in Lincoln's-inn fields, and afterwards at the theatre in Dorset Garden (17). In point of stile it resembled Shakespeare rather than Fletcher, and is more correctly finished than any of Sir William Davenant's former plays, which shews that he was not hurt by the applause that he had met with, but thought himself obliged to labour hard, and take so much the more pains to deserve it. Both these plays are without any testimonies of the author's friends before them, because published at a time, when, perhaps, there were not many who were inclined to inform the world that they were his friends.

XIII. *MADAGASCAR, with other poems*, London, 1648, 8vo. 2d edit.

His Madagascar was addressed to Prince Rupert, and must have been written many years before, since there are some commendatory verses addressed to him expressly upon this poem, by his old friend Sir John Suckling, who died about six years before the printing of this edition. There are some other commendatory verses also, that were prefixed to the first edition, and were reprinted now; and amongst these likewise there is a copy of Sir John Suckling's. We may discern from the printing of this second edition at that juncture, how much the poetick talent of Sir William Davenant was then admired, since it is plain he could then have no other patron than the publick, being himself an exile in France, and many of his friends with him. The dedicatory inscription before these poems is very singular and laudable, and as at the same time it is very short, the reader will probably be well pleased to peruse it. Thus it runs:

If these POEMS live, may their memories by whom they were cherished, ENDYM. PORTER, H. JERMYN, live with them.

decline,

decline, he judged it necessary to retire into France, where he was extremely well received by the Queen (x) and, it seems, was taken much into her confidence, since we find him embarked in a negotiation of great importance, when the King was at Newcastle, which was in the summer of 1646. Before this time Sir William had embraced the Popish Religion, which, we have reason to judge, might be a concurring, if not a principal, cause of his being employed at this time, and upon such an occasion. The noble Historian (y), who had always a particular friendship for him, has given a full account of it, though not much to his advantage, but still with all the tenderness due to his acknowledged sense of Sir William's good intentions, and of that long and intimate acquaintance that had subsisted between them; which is so much more worthy the reader's notice, as it has entirely escaped the observation of most of those, who have undertaken to give us this Gentleman's memoirs, though the most remarkable passage in his whole life (z) [G]. Upon his return to Paris, he fell in with that set of people, who laboured to silence the storm of their sorrows by some kind of amusement. His were literary; and the desire he had of writing an heroic poem, meeting with much leisure, and some encouragement, led him to undertake one of a new kind, the two first books of which he finished at the Louvre, where he lived with his old friend Lord Jermyn; and these, with a sensible preface, addressed to Mr. Hobbes, his answer, and some commendatory poems, were published in England (a). All, however, were not captivated by Sir William's verse, or frightened into silence by the Philosopher of Malmesbury's prose; so that the worth of this work was quickly drawn into question, and, upon this, the King's little Court were extremely divided (b). Fame, however, was so thin a diet, that Sir William Davenant was willing to venture into any climate that promised a better: yet, like a worthy man, he had a view to his country's good, while he consulted his own. He had heard, that vast improvements might be made in the loyal colony of Virginia, in case they had proper artificers, and, finding there were many of these in France, who were destitute of employment, he formed a very wise and honest project of removing industrious men, who were in want of bread, to a fruitful country that was in want of them; which having, by the assistance of Queen Henrietta-Maria, brought to bear, he embarked, with his little colony, at one of the ports in Normandy (c). But, as he was a most unlucky traveller, so, before his vessel was clear of the French coast, she was met by one of the Parliament ships of war, taken and carried into the Isle of Wight, where our disappointed projector was sent close prisoner to Cowes-Castle (d), and there had leisure enough, and, which is more extraordinary, wanted not inclination to resume his heroic poem; and, having written about half the third book, in a very gloomy prison, he thought fit to stop short again, finding himself, as he imagined, under the very shadow of death. This part of his poem was also published, and was, in those days, well received (e) [H]. In this situation

[G] *Though the most remarkable passage in his whole life.* The King, in retiring to the Scots, had followed the advice of the French Ambassador, who had promised on their behalf, if not more than he had authority to do, at least more than they were inclined to perform. To justify however his conduct at home, he was inclined to throw the weight in some measure upon the King, and with this view, he, by an express, informed Cardinal Mazarine, that his Majesty was too reserved in giving the Parliament satisfaction, and therefore desired that some person might be sent over, who might have a sufficient degree of credit with that Monarch, to persuade him to such compliances as were necessary for his service. 'The Queen, says the Noble Historian

(18) Clarendon's
Hist. Rebellion,
p. 495.

' (18), who was never advised by those who either understood or valued his true interest, consulted with those about her, and sent Sir William Davenant, an honest man and a witty, but in all respects inferior to such a trust, with a letter of credit to the King, who knew the person well enough under another character than was like to give him much credit in the argument in which he was intrusted, although her Majesty had likewise otherwise declared her opinion to his Majesty, "That he should part with the Church for his peace and security." Sir William Davenant had, by the countenance of the French Ambassador, easy admission to the King, who heard him patiently all he had to say, and answered him in that manner that made it evident he was not pleased with the advice. When he found his Majesty unsatisfied, and that he was not like to consent to what was so earnestly desired by them by whose advice he was sent, who undervalued all those scruples of conscience which his Majesty himself was strongly possessed with, he

took upon himself the confidence to offer some reasons to the King to induce him to yield to what was proposed, and among other things said, 'It was the opinion and advice of all his friends,' his Majesty asking 'What friends?' and he answering, said, 'that it was the opinion of the Lord Jermyn;' the King said, 'that the Lord Jermyn did not understand any thing of the Church.' The other said, 'the Lord Colepepper was of the same mind.' The King said, 'Colepepper had no religion,' and asked, 'Whether the Chancellor of the Exchequer was of that mind?' to which he answered he did not know, for that he was not there, and had deserted the Prince, and thereupon said somewhat from the Queen, of the displeasure she had conceived against the Chancellor, to which the King said, 'The Chancellor was an honest man, and would never desert him, nor the Prince, nor the Church, and that he was sorry he was not with his son, but that his wife was mistaken.' Davenant then offering some reasons of his own, in which he mentioned the Church slightly, as if it were not of importance enough to weigh down the benefit that would attend the concession, his Majesty was transported with so much indignation, that he gave him a sharper reprehension than was usual for him to give to any other man, and forbid him to presume to come again into his presence. Whereupon the poor man, who had in truth very good affections, was exceedingly dejected and afflicted, and returned into France to give an account of his ill success to those who sent him.

[H] *And was in those days well received.* He published at Paris a discourse upon this poem by way of preface to it, in a letter to Mr. Thomas Hobbes, dated from the Louvre at Paris, January 2, 1650, with the answer of Mr. Hobbes, dated at Paris, January

situation we find him in October 1650, and, indeed, in a worse situation no man could well be, the Parliament having delivered him over, by an ordinance, to be tried by a high

(21) An account of the Dramatick Poets, p. 112.

(22) Preface to his translation of Rapin's Reflections on Aristotle's treatise of Poetry.

January 10, the same year (19). Mr. Waller and Mr. Cowley wrote commendatory verses on the two first books of this poem. The three first books of it were printed under the following title, *GONDIBERT, an Heroic Poem, written by Sir WILLIAM DAVENANT*. The seventh and last canto of the third book, was printed at London, in 8vo. 1685 (20). Mr. Hobbes, in his letter above-mentioned, affirms, that he never yet saw a poem that had so much shape of art, health of morality, and vigour and beauty of expression, as this of our author. But that gentleman observes in his letter to the Honourable Edward Howard, on his intended impression of his poem of the *British Princes*, dated at Chatsworth, November 6, 1668, 'that his judgment in poetry hath been once already censured by very good wits for commending Gondibert. But yet have they not I think, continues he, disabled my testimony. For what authority is there in wit? a jester may have it; a man in drink may have it, and be fluent overnight, and wise and dry in the morning. What is it? or, Who can tell whether it be better to have it or be without it, especially if it be a pointed wit? I will take my liberty to praise what I like, as well as they do to reprehend what they do not like.' Mr. Langbaine tells us, that it was designed by him to be an imitation of an English drama, it being to be divided into five books, as the other is into five acts; the cantos to be the parallel of the scenes, with this difference, that this is delivered narratively, the other dialogue-wise (21). The Honourable Edward Howard, Esq; tells us, 'that in this poem there are many remote and excellent thoughts, with apt and perspicuous expressions, the essential dignities of the Muses; whose chiefest beauties flow from the ornaments of words, and delightful variety of imagination; from which choice productions of nature, the Muses are most desirous to adopt their children, and, in no small degree, are justly acknowledged to the honour of his pen. Notwithstanding which, his heroick poem of *Gondibert*, coming into the world in a capricious time of censure, perhaps did not meet with a deserved reception, though the severest judges, I doubt not, are forced to grant, that there is in that work more to be praised than pardoned.' Mr. Thomas Rymer observes (22), that our author's wit is well known, and that in the preface to this poem there appear some strokes of an extraordinary judgment; that he is for unbeaten tracks and new ways of thinking; but that certainly in his untried seas he is no great discoverer. One design of the Epick Poets before him, was to adorn their own country, there finding their heroes and patterns of virtue, whose example, as they thought, would have the greatest influence and power over posterity. 'But this Poet, says Mr. Rymer, steers a different course: his heroes are all foreigners; he cultivates a country that is nothing akin to him; it is Lombardy that reaps the honour of all. Other Poets choose some action or hero so illustrious, that the name of the poem prepared the reader, and made way for it's reception. But in this poem none can divine what great action he intended to celebrate, nor is the reader obliged to know whether the hero be Turk or Christian. Nor do the first lines give any light or prospect into his design. Methinks, though his religion could not dispense with an invocation, he needed not have scrupled at the proposition. Yet he rather chooses to enter in at the top of the house, because the mortals of mean and satisfied minds go in at the door. And I believe the reader is not well pleased to find his poem begin with the praises of Aribert, when the title has promised a *Gondibert*. But before he falls on any other business, he presents the reader with a particular description of each hero, not trusting their actions to speak for them as former Poets have done. Their practice was fine and artificial, his he tells us is a new way. Many of his characters have but

little of the heroick in them; Dalgia is a jilt proper only for Comedy; BIRTHA, for a Pastoral; and Astragon, in the manner here described, yields no very great ornament to an heroick poem: nor are his battles less liable to censure than those of Homer. He dares not, as other Heroick Poets, heighten the action by making Heaven and Hell interested, for fear of offending against probability, and yet he tells us of

— Threads by patient Parca slowly spun.

And for being dead his phrase is,

Heaven call'd him where peacefully he rules a star.

And the emerald he gives to BIRTHA has a stronger tang of the old woman, and is a greater improbability, than all the enchantments in Tasso. A just medium reconciles the farthest extremes, and one preparation may give credit to the most unlikely fiction. In *Marino*, Adonis is presented with a diamond ring, where indeed the stone is much what of the same nature; but this present is made by Venus, and from a goddess could not be expected a gift of ordinary virtue. The same Critick afterwards tells us, 'that the sort of verse of which Sir William makes choice, might contribute much to the vitiating of his stile; for thereby he obliges himself to stretch every period to the end of four lines. Thus the sense is broken perpetually with parentheses, the words jumbled in confusion, and a darkness spread over all; so that the sense is either not discerned, or found not sufficient, for one just verse which is sprinkled on the whole tetrastich. In the Italian and Spanish, where all the rhymes are dissyllable, and the percussion stronger, this kind of verse may be necessary; and yet, to temper that grave march, they repeat the same rhyme over again, and then they close the stanza with a couplet farther to sweeten the severity. But in French and English, where we rhyme generally with only one syllable, the stanza is not allowed, much less the alternate rhyme in long verse, for the sound of the monosyllable rhyme is either lost before we come to it's correspondent, or we are in pain by the so long expectation and suspense. This alternate rhyme, and the downright morality throughout whole cantos together, shew DAVENANT better acquainted with the Quatrains of Pybrach which he speaks of, than with any true models of Epick Poesy. After all, DAVENANT is said to have a particular talent for the manners; his thoughts are great; and there appears something roughly noble throughout this fragment, which had he been pleased to finish, it would doubtless not have been left so open to the attack of Criticks.' All these objections to the measure of the verse, had been foreseen, considered, and answered, by Sir William DAVENANT: but instead of troubling the reader with what he has delivered very well, but very much at large, upon this subject, we will content ourselves with saying, that his reasons had so much weight with Mr. Dryden, a better Poet indeed than him, and at the same time a better Critick than Mr. Rymer, that he thought fit to imitate him in the choice of his stanza, and gives the following reasons for it in a letter to Sir Robert Howard (23). 'I have, says he, chosen to write my poem in quatrains or stanzas of four, in alternate rhyme, because I have ever judged them more noble, and of greater dignity, both for the sound and number, than any other verse in use amongst us, in which I am sure I have your approbation. The learned languages have certainly a great advantage over us, in not being tied to the slavery of any rhyme, and were less constrained in the quantity of every syllable, which they might vary with spondees or dactyls, besides so many other helps of grammatical figures, for the lengthening

(23) Preface to his *Annus mirabilis*, Lond. 1669. 8vo.

high commission Court, where, supposing that innocence might have been safe, it was pretty difficult to know how a man should prove himself innocent (*f*). He was conveyed from the Isle of Wight to the Tower of London, and, for some time, his life was in the utmost hazard; nor is it well known how it was saved. Some say, that two Aldermen of York, to whom he had been very kind when they were prisoners, and when he had a high command in the Marquis of Newcastle's army, interposed out of gratitude (*g*); others, that Milton was his friend (*h*), and prevented the utmost effects of party rage from descending on the head of this son of the Muses. But, whoever saved his life, we find him two years after a prisoner in the Tower, where he obtained some indulgence by the favour of the Lord Keeper Whitelocke (*i*); upon receiving which he wrote him a letter of thanks, that would have secured him the reputation of the politest pen of those times, if nothing of his had remained besides [*I*]. This liberty of his left him only room to solicit farther favours, which he likewise obtained, and was, at last, entirely delivered from every thing but the narrowness of his circumstances; and against these, encouraged by the interest of his friends, he likewise made a bold effort. He knew very well, that a Play-house was utterly inconsistent with the purity of those times, and yet, if he could open any thing like one, it would be sure to be well filled. He managed his project with great address, and by degrees brought it to bear: and, having the countenance of Lord Whitelocke, Sir John Maynard, and other persons of great rank (*k*), who were ashamed of the hypocrisy that then prevailed, he opened a kind of a theatre at Rutland-House, where several pieces were acted; and these, if they did not gain him reputation, brought him money, of which, at that time, he stood in great need. The first of these entertainments, for that was the name they originally bore, was performed May 21st, and published September the third, 1656 (*l*). As to the names and nature of these mixt compositions, we shall give the reader the best account we can in the notes [*K*]. After the

or abbreviation of them, than the modern are in the close of that one syllable, which often confines, and more often corrupts, the sense of all the rest. But in this necessity of our rhymes I have always found the couplet verse most easy, though not so proper for this occasion; for there the work is sooner at an end, every two lines concluding the labour of the Poet; but in quatrains he is to carry it farther on, and not only so, but to bear along in his head the troublesome sense of four lines together. For those who write correctly in this kind must needs acknowledge, that the last line of the stanza is to be considered in the composition of the first. Neither can we give ourselves the liberty of making any part of a verse for the sake of rhyme, or concluding with a word which is not current English, or using the variety of female rhymes, all which our fathers practised, and for the female rhymes they are still in use amongst other nations; with the Italian in every line, with the Spaniard promiscuously, with the French alternately, as those who have read the *Alarique*, the *Pucelle*, or any of their later poems, will agree with me. And besides this they write in Alexandrins, or verses of six feet, such as, amongst us, is the old translation of Homer by Chapman. All which, by lengthening of their chain, makes the sphere of their activity the larger. I have dwelt too long upon the choice of my stanza, which you may remember is much better defended in the Preface to *Gondibert*, and therefore I will hasten to acquaint you with my endeavours in the writing. A late learned Professor of Greek in the university of Aberdeen, censures the structure of the poem; but at the same time pays a compliment to the abilities of the author (*24*). 'It was indeed, says he, a very extraordinary project of our ingenious countryman, to write an Epick Poem without mixing allegory, or allowing the smallest fiction throughout the composition. It was like lopping off a man's limb, and then putting him upon running races, though it must be owned, that the performance shews with what ability he could have acquitted himself, had he been sound and entire.' After all, it will, in the eye of a judicious reader, pass for an incontestable proof of the merit of this poem, that it has been a subject of controversy for more than a hundred years, that is, from its first appearance to the present time. Perhaps the dispute had been long ago decided, if the author's leisure or inclination had permitted him to finish it. At present we see it to great disadvantage, and if, in spite of

this, it has any beauties, we may well conclude that it would have come much nearer perfection, if the story begun with so much spirit, had been brought to an end upon the author's plan.

[*I*] *If nothing of his had remained besides.* This short epistle, as it regards a very essential part of his personal history, so, as we hinted in the text, it affords incontestible evidence of his writing as easy and correct prose, with as much true spirit, and as far removed either from meanness or bombast, as any that can be produced in our language, even if liberty were given to translate from Voiture, or any other of the boasted letter-writers in a neighbouring nation (*25*).

(*25*) Whitelocke's Mem. p. 546, 547.

My Lord,

I AM in suspense, whether I should present my thankfulness to your Lordship for my liberty of the Tower, because, when I consider how much of your time belongs to the publick, I conceive, that to make a request to you, and to thank you afterwards for the success of it, is to give you no more than a succession of trouble; unless you are resolved to be continually patient and courteous to afflicted men, and agree in your judgment with the late wife Cardinal, who was wont to say, *If he had not spent as much time in civilities as in business, he had undone his master.*

But whilst I endeavour to excuse this present of thankfulness, I should rather ask your pardon for going about to make a present to you of myself; for it may argue me to be incorrigible, that, after so many afflictions, I have yet so much ambition as to desire to be at liberty, that I may have more opportunity to obey your Lordship's commands, and shew the world how much I am,

My Lord,

Tower, Aug. 9, 1652.

Your Lordship's most obliged, most humble, and obedient servant,
WILL. DAVENANT.

[*K*] *The best we can in the notes.* Some of the people then in power, it seems, were lovers of Musick, and, at bottom perhaps, were wise enough to know, that there was nothing scandalous or immoral in the diversions of the theatre: but this they did not think proper to own, and therefore persecuted the poor Players who attempted to act privately, sometimes in one place, and sometimes in another, as if they had held seditious or lewd assemblies (*26*). Sir William Davenant therefore, when he applied for permission, lish Stage, p. 8, 9.

(m) See this explained in the note.

(o) These poems are inserted in the general collection of his works.

the ice was thus broken, he grew a little bolder, and not only ventured to write, but to act, several new plays, which were also somewhat in a new taste; that is, they were more regular in their structure, and the language, generally speaking, smoother and more correct than in the old tragedies (m). These improvements, there is good reason to believe, were, in a great measure, owing to Sir William's long residence in France, which gave him an opportunity of reading their best writers, and hearing the sentiments of their ablest critics upon dramatic entertainments, when they were as much admired and encouraged there as, for some years, they had been slighted and discountenanced in England. That these were really improvements, and that the public stood greatly indebted to Sir William Davenant, as a Poet as well as Master of a Theatre, may be put out of all doubt, if there be any regard due to Mr. Dryden's judgment [L]. Upon the commotions which preceded the Restoration, and particularly upon Sir George Booth's insurrection, Sir William Davenant fell into fresh troubles, and underwent another imprisonment, from which, however, he was quickly released (n). He complimented General Monk upon his good designs, and the great capacity he had shewn in the execution of them, in a short poem, and his Majesty King Charles the Second, upon his return, in a very long one (o). Soon after the Restoration there were two companies of players form-

(n) Whitelocke's Mem. p. 682.

permission, called what he intended to represent an Opera; but, when he brought it upon the stage, it appeared quite another thing, which, when printed, had the following title:

XIV. *First Day's Entertainment at Rutland-House, by Declamation and Musick, after the manner of the Ancients.* Lond. 1656, 8vo.

This being an introductory piece, it required all the author's wit to make it answer different intentions; for, first, it was to be so pleasing as to gain applause; and next, it was to be so remote from the very appearance of a play, as not to give any offence to that pretended sanctity which was then in fashion. It began with musick, then followed a prologue, in which the author banters the oddity of his own performance. The curtain being drawn up to the sound of slow and solemn musick, there followed a grave declamation by one in a gilded rostrum, who personated Diogenes, and whose business was to rail at and expose publick entertainments. Then musick in a lighter strain, after which a person in the character of Aristophanes, the old comic Poet, answered Diogenes, and shewed the use and excellency of dramattick entertainments. The whole of the grave entertainment was concluded by a song, accompanied with musick, in which the arguments on both sides are succinctly and elegantly stated. The second part of the entertainment consisted of two lighter declamations; the first, by a citizen of Paris, who wittily rallies the follies of London; the other, by a citizen of London, who takes the same liberty with Paris, and it's inhabitants. To this was tacked a song, and after that came a short epilogue. The musick, which was very good, was composed by Dr. Coleman, Capt. Cook, Mr. Henry Lawes, Mr. George Hudson.

XV. *The Play-house to be Lett.*

This was another very singular entertainment, composed of five acts, each being a distinct performance. The first act is introductory, shews the distress of the players in the time of vacation, that obliges them to lett their house, which several offer to take for different purposes, amongst the rest a Frenchman, who had brought over a troop of his countrymen to act a farce. This is performed in the second act, which is a translation of Moliere's *Sganarelle*, or, the Cuckold in Conceit; all in broken French, to make the people laugh. The third act is a sort of comic opera, under the title of the History of Sir Francis Drake. The fourth act is a serious opera, representing the cruelties of the Spaniards in Peru. The fifth act is a burlesque in Heroicks, on the amours of Cæsar and Cleopatra; has a great deal of wit and humour, and was often acted afterwards by itself (27).

XVI. *News from Plimouth, a Comedy.*

XVII. *Law against Lovers, a Tragi-Comedy.*

This is composed out of two of Shakespeare's plays; *Measure for Measure*, and *Much ado about Nothing*. Mr. Langbaine gives a very good character of it (28); and, indeed, it is very smoothly and correctly written.

XVIII. *The Distresses, a Tragedy.*

In Mr. Langbaine's catalogue this is stiled a Tragi-Comedy (29), merely because it is fortunate in it's catastrophe.

XIX. *The Siege, a Tragi-Comedy.*

The scene is laid at Pisa in Italy, and it derives it's title from the same cause with the former.

XX. *The Fair Favourite, a Tragi-Comedy.*

All these plays were acted in the time of Oliver and Richard, first printed in quarto, and afterwards revised, and inserted in the author's works. To these we may add,

XXI. *The Siege of RHODES, in two parts.*

These were a kind of operas, and acted to musick. The author revised, altered, and augmented them, after the Restoration, when they had the honour of the King's presence: they were also printed and published in folio, with a dedication to the Lord Chancellor Clarendon, and very much esteemed.

[L] If there be any regard due to Mr. Dryden's judgment.] What we have ventured to advance in the text and notes, in favour of an author and his works, now so little regarded, seems to stand in need of some support, and therefore we shall cite what so great a Poet, and so good a judge of Poetry, has written upon this subject, with regard to heroick plays. Mr. Dryden (30) tells us, 'The first light we had of them on the English theatre, was from the late Sir William Davenant. It being forbidden him, in the religious times, to act tragedies and comedies, because they contained some matter of scandal to those good people, who could more easily dispossess their lawful Sovereign, than endure a wanton jest, he was forced to turn his thoughts another way, and to introduce the examples of moral virtue, writ in verse, and performed in recitative musick. The original of this musick, and of the scenes which adorned his work, he had from the Italian operas; but he heightened his characters, as I may probably imagine, from the examples of Corneille, and some French Poets. In this condition did this part of Poetry remain at his Majesty's return, when growing bolder, as now being owned by publick authority, Davenant reviewed his *Siege of Rhodes*, and caused it to be acted as a just drama. But, as few men have the happiness to begin and finish any new project, so neither did he live to make his design perfect. There wanted the fullness of a plot, and the variety of characters, to form it as it ought; and, perhaps, somewhat might have been added to the beauty of the stile; all which he would have performed with more exactness, had he pleased to have given us another work of the same nature. For myself, and others who come after him, we are bound, with all veneration to his memory, to acknowledge what advantage we received from that excellent ground-work which he laid; and, since it is an easy thing to add to what already is invented, we ought all of us, without envy to him, or partiality to ourselves, to yield him the precedence in it.'

ed, one under the title of the King's Servants, the other under that of the Duke's Company, both by patents from the Crown; the first granted to Henry Killigrew, Esq; and the latter to Sir William Davenant (p). The King's Company acted first at the Red Bull, at the upper end of St. John's-street; from thence they removed to a new Play-house in Vere-street, Clare-market; and, after playing a year or two there, they established themselves in the Theatre-Royal in Drury-lane. As for Sir William Davenant, it was some time before he compleated his Company, into which he took all who had formerly played under Mr. Rhodes, in the Cockpit in Drury-lane, and, amongst these, the famous Mr. Betterton, who appeared first to advantage, under the patronage of Sir William Davenant (q). He opened the Duke's Theatre in Lincoln's-Inn-Fields with his own dramatic performance of *The Siege of Rhodes*, the House being finely decorated, and the Stage supplied with painted scenes, which were by him introduced at least, if not invented (r), affording certainly a great addition of beauty to dramatic entertainments, though some there are who have insinuated, that fine scenes proved the ruin of fine acting [M]. We must not omit that, upon the King's return, and Sir William Davenant's having an interest at Court, he gave a noble instance of his gratitude to Mr. Milton, who had been so instrumental in saving his life ten years before, by rendering him the like service, and preserving him from feeling the effects of that resentment which was so strong against him, that many writers have considered his as a kind of miraculous escape (s). After all the storms that he had met with, Sir William Davenant had the comfort of passing the last years of his life in credit and quiet. He transferred his company to the new and magnificent Theatre built in Dorset-Gardens (t), where some of his old plays were revived, with very singular circumstances of royal kindness and favour, and a new one, when brought upon the Stage, met with great applause. The last labour of his pen was in altering a play of Shakespeare's, so as to render it agreeable to that age, or rather, susceptible of those theatrical improvements which he had brought into fashion; and in this also he had as much success as he could expect; and, though he did not live to see the full effects of it, yet the highest tribute of praise has been paid, and the strictest justice done, to his memory and merit, by that excellent Poet, who succeeded to his laurel (u) [N].

He

[M] *Proved the ruin of fine acting.* It may, possibly, afford some satisfaction to the reader, to have this point briefly explained. He has heard, that, in King Charles the First's time, dramatick entertainments were accompanied with rich scenery, curious machines, and other elegant embellishments, proceeding chiefly from the skill and care, the great capacity and wonderful dexterity, of that celebrated English Architect Inigo Jones. But these were employed only in masques at Court, and were too expensive for the little theatres in which plays were then acted. In them there was nothing more than a curtain, of some very coarse stuff, upon the drawing up of which the stage appeared either with bare walls on the sides, coarsely matted, or covered with tapestry, so that for the place originally represented, and all the changes successively in which the Poets of those times indulged themselves very freely, there was nothing to help the reader's understanding, or to assist the actor's performance, but bare imagination. It is true, that, while things continued in this situation, there were a great many play-houses, sometimes six or seven, open at once. Of these, some were large, and in part open, where they acted by day-light; others smaller, but better fitted up, where they made use of candles. The plainness of the theatre made the prices small, and this drew abundance of company; yet, upon the whole, it may be well doubted, whether the spectators, in all these houses, were really superior in number to those who have frequented the theatres in later times. If the spirit and judgment of the actors supplied all deficiencies, and made, as some would suggest, plays more intelligible without scenes than they afterwards were with them, it must be very astonishing at least, if not incredible: neither is it difficult to assign another cause why those, who were concerned in play-houses, were angry with scenes and decorations, which was, that, notwithstanding the advanced prices, their profits, from that time, were continually sinking. An author, who seems to be very well acquainted with the subject on which he writes, assures us, that the whole sharers in Mr. Hart's company divided a thousand pounds a year apiece, before these new and expensive decorations came into fashion (31). Sir William Davenant considered things in another light: he was well acquainted with the alterations

which the French theatre had received, under the auspice of Cardinal Richlieu, who had an excellent taste; and he remembered the elegant contrivances of Inigo Jones, which were not at all inferior to the designs of the best French masters. Sir William was likewise sensible, that the Monarch he served was an exquisite judge of every thing of this kind; and all these considerations, taken together, excited in him a passion for the advancement of the theatre, to which without dispute the great figure it has since made is chiefly owing. Mr. Dryden acknowledged his admirable talents in this way, and very gratefully remembers the pains taken by Sir William to set a work of his in the fairest light possible, and to which he very ingenuously ascribes, in a great measure, the success with which it was received.

[N] *By that excellent Poet, who succeeded to his laurel.* At the opening of the new play-house in Dorset-Gardens, Sir William Davenant's play, called *Love and Honour*, was acted before the Court; upon which occasion Mr. Betterton, who played Prince Alvaro, wore the King's coronation suit; his Royal Highness of York gave Mr. Harris, who played Prince Prospero, his; and Mr. Price, who performed the part of Lionel Duke of Parma, had a very rich suit, that was given him by the Earl of Oxford (32). We come now to the works penned by our Laureat in the evening of his days; the last of which were,

(32) Hist. of the Eng. Stage, p. 91.

XXII. *The Man's the Master*, a Comedy. Lond. 1669, 4to.

This play was acted in our author's life-time, with great applause, though not published till after his decease: the design, and part of the language, is borrowed from Scarron's *Jodelet, ou le Maître valet*, and part from *L'Heretier ridicule*, a Comedy of the same author's (33).

(33) Langbaine's English Poets, p. 109.

XXIII. *The Tempest, or the Inchanterd Island*, altered from Shakespeare by Sir William Davenant and Mr. Dryden. Lond. 1676, 4to.

In the preface to this play, which is dated Dec. 1st, 1669, Mr. Dryden gives the following account of the share our author had in this performance, and is that which we have hinted at in the text. 'Sir William Davenant, says he, who was a man of quick and piercing imagination, soon found that somewhat might be added to the design of Shakespeare, of which neither Fletcher nor Suckling had ever

(31) *Historia Histronica*, or an Historical account of the English Stage, p. 11.

He died at his house in little Lincoln's-Inn-Fields, April 7th, 1668, aged sixty-three (w), and, two days afterwards, was interred in Westminster-Abbey, when, to the great grief of honest Mr. Wood, there was an inexcusable error committed in the ceremony; for, through haste, the laurel-wreath was forgotten, which should have been placed upon his coffin (x). On his grave-stone is inscribed, in imitation of Ben Jonson's short epitaph, O RARE SIR WILLIAM DAVENANT! It may not be amiss to observe, that his remains rest very near the place, out of which, those of Mr. Thomas May, Historian and Secretary to the Parliament, who caused him to be interred there with a fine monument and pompous inscription, were removed (y). As to the character of our author (z), the reader may easily collect it from this account of his life and works; to facilitate which still farther, some other particulars have been placed in the notes [O]. In regard to his family, we have

(x) *Hist. et Antiq. Oxon. Lib. ii. p. 169.*

(y) *Antiquities of St. Peter's, Westminster, vol. ii. p. 23, in the Appendix.*

(z) *Langbaine's English Poets, p. 115.*

ever thought. And, therefore, to put the last hand to it, he designed the counterpart to Shakespeare's plot, namely, that of a man who had never seen a woman, that, by this means, those two characters, of Innocence and Love, might the more illustrate and commend each other. This excellent contrivance he was pleased to communicate to me, and to desire my assistance in it. I confess, that, from the very first moment, it so pleased me, that I never writ any thing with more delight. I might likewise do him that justice to acknowledge, that my writing received daily his amendments, and that is the reason why it is not so faulty as the rest which I have done, without the help or correction of so judicious a friend. The comical parts of the failors were also of his invention, and, for the most part, his writing, as you will easily discover by the stile.

[O] *Have been placed in the notes.* We have already mentioned a poem written some years after the Restoration, under the same title with Sir John Suckling's, viz. *The Sessions of the Poets*: in this our author is a little severely, not to say rudely, handled in the following stanzas (34).

Will. Davenant would fain have been steward o' th' court,
To have fin'd and amerc'd each man at his will,
But Apollo, it seems, had heard a report,
That his choice of new plays did shew h'ad no skill.

Besides, some critics had ow'd him a spite,
And a little before had made the god fret,
By letting him know the Laureat did write
That damnable farce, *The House to be Lett*.

The Historian of Oxford takes some pains to inform us, that, while our author was in that University, he made but a small progress in the severer parts of learning, but striking out into the smoother road of Poetry, he at once indulged his own inclination, and discovered the force of his natural genius, which, without the assistance of any guides, and with but a very small acquaintance with the ancients, enabled him to aspire unto, and even acquire, the Laurel. This is very handsomely expressed by Dr. Fell, or whoever translated Mr. Wood's sentiments upon that

(35) *Hist. et Antiq. Oxon. Lib. ii. p. 163.*

subject (35). *Sed ingenium ipsius, tam asperis & horridis studiis semper aversum ad amœniores Poeticæ campos statim properavit. In his nemo letiori decursu, nemo feliciori volatu lauream promeruit, & quamvis omnibus veterum subsidiis destitutus solâ tamen ingenii vi, eos ita assequutus videtur, ut grande profectò rarissimique exempli documentum dederit, quantum sine arte sola natura præstare valeat.* Mr. Dryden, who knew him better, and who was also a better judge, has given us a true picture of his poetick character (36). "I found

(36) *Preface to the Tempest.*

him, says he, of so quick a fancy, that nothing was proposed to him on which he could not suddenly produce a thought, extremely pleasant and surprising, and those first thoughts of his, contrary to the old Latin proverb, were not always the least happy. And, as his fancy was quick, so likewise were the products of it remote and new. He borrowed not of any other, and his imaginations were such as could not easily enter into any other man. His corrections were sober and judicious, and he corrected his own writings much more severely than those of another man, bestowing twice the time and labour in polishing which he used in invention.

Thus, with all the industry in our power, we have collected, and, with all the care and application possible, have digested, the scattered memoirs of this once celebrated Poet; and, to justify our diligence therein, we will sum up all by putting posterity in mind, that it is to him we owe the setting our theatre upon a level with those of France and Italy (37), the preserving the greatest genius for Poetry this nation ever produced (38), and the bringing upon the stage, and instructing, the ablest actor that ever trod thereon (39).

(37) *Hist. et Antiq. Oxon. Lib. ii. p. 169.*

(38) *Explanatory Notes, &c. by J. Richardson, p. xci.*

(39) *Life of Betterton, p. 5.*

* * [The obligations of the English Theatre to Sir William Davenant have been celebrated by various writers, and are sufficiently displayed by our ingenious predecessor. It is remarkable, that not one of the numerous plays, which were written by Sir William, holds, at present, the possession of the stage. This, however, is not owing to their want of merit; for it is said that there are certainly some among them which much better deserve the honour of being acted, than many pieces that are very frequently and successfully represented (40).

(40) *Biographia Dramatica, vol. i. p. 117.*

The grand object on which Sir William Davenant's poetical reputation depends is his *Gondibert*; and there still remains a diversity of opinion concerning the light in which it ought to be considered. As, when it was first published, it was condemned by some persons, and applauded by others, so, among the critics of the present day, it has met both with censurers and defenders.

Mr. Granger has spoken of it with a severity which we do not usually find in that amiable writer. "Sir William Davenant," says he, "was a man of great natural and improved talents, which he unfortunately misapplied. He distinguished himself by a bold, but unsuccessful attempt to enlarge the sphere of poetry. He composed an heroic poem, called "*Gondibert*" in five books, after the model of the Drama; applauded himself greatly upon this invention; and looked upon the followers of Homer as a timorous, servile herd, that were afraid to leave the beaten track. This performance, which is rather a string of Epigrams than an Epic Poem, was not without its admirers, among whom were Waller and Cowley. But the success did not answer his expectation. When the novelty of it was over, it presently sunk into contempt; and he at length found, that when he strayed from Homer he deviated from nature (41)."

(41) *Granger, vol. iv. p. 43.*

Mr. Knox is also on the unfavourable side of the question. "The *Gondibert* of Davenant," says this Gentleman, "has been the subject of critical controversy from the time of its publication. Its plan was originally defended by the great Hobbes, and its execution has been greatly praised. Yet few have attended to it with any pleasure, and still fewer have had a degree of patience sufficient to bear them through the perusal of it. The truth is, the stanza which he has adopted, is better suited to elegiac than to heroic poetry. A beautifully descriptive passage, interspersed in the course of two or three hundred lines, will not alleviate the tedium of the rest; as an occasional flash of lightning cannot illuminate the continued gloominess of an extensive prospect (42)."

(42) *Knox's Essays, vol. ii. p. 377.*

The objections of Bishop Hurd to the *Gondibert* are still more important. "When a writer," says this ingenious and elegant critic, "who is driven by so many powerful motives to the imitation of preceding

have not been able to collect any distinct account of it, farther than what regards two of his sons, concerning whom the reader will receive all the information we can give in the succeed-

ing models, revolts against them all, and determines, at any rate, to be *original*, nothing can be expected but an awkward straining in every thing. *Improper method, forced conceits, and affected expression*, are the certain issue of such obstinacy. The business is to be *unlike*; and this he may very possibly be, but at the expence of graceful ease and true beauty. For he puts himself, at best, into a convulsed, unnatural state; and it is well, if he be not forced, beside his purpose, to leave *common sense*, as well as his *model*, behind him. Like one, who would break loose from an impediment, which holds him fast; the very endeavour to get clear of it throws him into *uneasy attitudes, and violent contortions*; and, if he gain his liberty at last, it is by an *effort*, which carries him much farther than the *point*, he would wish to stop at.

“And, that the reader may not suspect me of asserting this without experience, let me exemplify what has been here said in the case of a very eminent person, who, with all the advantages of art and nature that could be required to adorn the true poet, was ruined by this single error. The person I mean was Sir WILLIAM D'AVENANT; whose *Gondibert* will remain a perpetual monument of the mischiefs, which must ever arise from this affectation of originality in lettered and polite poets.

“The great author, when he projected his plan of an heroic poem, was so far from intending to steer his course by *example*, that he sets out, in his preface, with upbraiding the followers of Homer, as a base and timorous crew of *coasters*, who would not adventure to launch forth on the vast ocean of invention. For, speaking of this poet, he observes, “that, as sea marks are chiefly used by coasters, “and serve not those who have the ambition of “discoverers, that love to sail in untried seas; so he “hath rather proved a guide for those, whose “satisfied wit will not venture beyond the track of “others; than to them, who affect a new and remote way of thinking; who esteem it a deficiency “and meanness of mind, to stay and depend upon “the authority of example.”

“And, afterwards, he professedly makes his own merit to consist in “an endeavour to lead truth “through unfrequented and new ways, and from “the most remote shades; by representing nature, “though not in an affected, yet in an unusual “dress.” These were the principles he went upon; let us now attend to the success of his endeavours.

“The *METHOD* of his work is defective in many respects. To instance in the two following. Observing the large compass of the antient epic, for which he saw no cause in nature, and which, he supposed, had been followed merely from a blind deference to the authority of the first model, he resolved to construct an heroic poem on the narrower, and, as he conceived, juster plan of the dramatic poems. And, because it was their practice, for the purpose of *raising the passions* by a close accelerated plot, and for the convenience of *representation*, to conclude their subject in *five acts*, he affects to restrain himself within the same limits. The event was, that, cutting himself off, by this means, from the opportunity of digressive ornaments, which contribute so much to the pomp of the epic poetry; and, what is more essential, from the advantage of the most gradual and circumstantiated narration, which gives an air of *truth and reality* to the fable, he failed in accomplishing the proper *end* of this poem, *ADMIRATION*; produced by a grandeur of design and variety of important incidents, and *sustained* by all the energy and minute particularity of description.

“2. It was essential to the antient epos to raise and exalt the fable by the intervention of *supernatural agency*. This, again, the poet mistook for the prejudice of the affected imitators of Homer, “who had “so often led them into heaven and hell, till, by “conversation with gods and ghosts, they sometimes

“deprive us of those natural probabilities in story, “which are instructive to human life.” Here then he would needs be original; and so, by recording only the affairs of men, hath fairly omitted a necessary part of the epic plan, and that which, of all others, had given the greatest state and magnificence to its construction. Yet here, to do him justice, one thing deserves our commendation: It had been the way of the Italian romancers, who were at that time the best poets, to run very much into prodigy and enchantment. “Not only to exceed the *work*, but “also the *possibility* of nature, they would have impenetrable armors, enchanted castles, invulnerable bodies, iron men, flying horses, and a thousand other such things, which are easily feigned by “them that dare.” These conceits, he rightly saw, had too slender a foundation in the serious belief of his age to justify a relation of them. And had he only dropped these, his conduct had been without blame. But, as it is the weakness of human nature, the observation of this extreme determined him to the other, of admitting nothing, however well established in the general opinion, that was *supernatural*.

“And as here he did too much, so in another respect it may be observed, he did too little. The romancers, before spoken of, had carried their notions of *gallantry* in ordinary life, as high, as they had done those of *preternatural agency*, in their marvellous fictions. Yet here this original genius, who was not to be held by the shackles of superstition, suffered himself to be entrapped in the silken net of *love and honour*. And so hath adopted, in his draught of *characters*, that elevation of sentiment which a change of manners could not but dispose the reader to regard as *fantastic* in the Gothic romance, at the same time that he rejected what had the truest grace in the antient epic, a *sober intermixture of religion*.

“The *execution* of this poem was answerable to the general *method*. His *SENTIMENTS* are frequently forced, and so tortured by an affectation of wit, that every stanza hath the air of an epigram. And the *EXPRESSION*, in which he cloaths them, is so quaint and figurative, as turns his description almost into a continued riddle.

“Such was the effect of a studious affectation of *originality* in a writer, who, but for this misconduct, had been in the first rank of our poets. His endeavour was to keep clear of the models, in which his youth had been instructed, and which he perfectly understood. And in this indeed he succeeded. But the success lost him the possession of, what his large soul appears to have been full of, a true and permanent glory; which hath ever arisen, and can only arise, from the unambitious simplicity of nature; *contemplated* in her own proper form, or, by *reflexion*, in the faithful mirror of those very models, he so much dreaded (43).”

While we strongly feel the force of the sentiments which are here advanced, it is no small pleasure to us, that so much justice is done to Sir William Davenant's great abilities. If he had not pursued a mistaken plan, it is allowed that he would have been in the first rank of our poets.

With all its faults, the *Gondibert* has still its sincere and ardent admirers. The editor of the *Biographia Dramatica* is of opinion, that the severity of criticism to which the poem has been exposed, has arisen much more from envy than from justice; “for,” says he, “though the story of it may not “perhaps be so interesting (and that too in a great “measure from its not being so well known) as “those of the *Iliad* and *Æneid*, and that the fetters “of rhyme, and still more so, those of stanza poetry, “lay it under very great restraint, yet it must be “acknowledged, even by its strongest opponents, “that there runs through the whole of it a sublimity “in the sentiments, a nobleness in the manners, a “purity in the diction, and a luxuriancy in the conceptions, that would have done honour to any “writer

(43) Hurd's Critical Commentaries, Notes, and Dissertations, vol. iii. p. 138—144.

succeeding articles. Sir William Davenant's works entire were published by his widow in 1673, and dedicated to his Royal Highness the Duke of York, afterwards King James II. and,

(44) *Biog. Dram.* "writer of any age or country whatsoever (44)." *ubi supra.*

Mr. Headley, whose premature decease will be reflected upon with concern by every lover of polite literature, has distinguished himself in behalf of the Gondibert. It is to this poem, he observes, that Davenant has to trust for his fame, and he adds, that it particularly merits a republication. "From its total rejection," continues Mr. Headley, "of supernatural agency, it has afforded the critics an ample subject of contention. After all, it seems but candid to examine every work by those rules only which the author prescribed himself in the composing of it: every contrary step is but trying a man of one country by the laws of another. What right have we, therefore, to be offended at not finding the critical acts passed by Aristotle originally, and re-echoed by Bosiu and the French critics, rigidly observed, when it was the author's professed intention to write without them? We may, nearly with the same propriety, accuse Shakespeare for not adhering to the unities. It was Davenant's intention to make an experiment, and let him be heard in his own words: 'If I be accused of innovation, or to have transgressed against the method of the ancients, I shall think myself secure in believing that a poet, who hath wrought with his own instruments at a new design, is no more answerable for disobedience to predecessors than law-makers are liable to those old laws which themselves have repealed.' In Bishop Hurd our author has found a formidable accuser. I transcribe the following very sensible passage from his *Essays on Chivalry and Romance*: 'Pagan gods and Gothic fairies were equally out of credit when Milton wrote; he did well, therefore, to supply their room with angels and devils. If these too should wear out of the popular creed (and they seem in a hopeful way, from the liberty some late critics have taken with them), I know not what other expedients the Epic poet might have recourse to; but this I know, the pomp of verse, the energy of description, and even the finest moral paintings, would stand him in no stead. Without admiration (which cannot be effected but by the marvellous of celestial intervention, I mean the agency of superior natures really existing, or by the illusion of the fancy taken to be so), no Epic poem can be long lived'—It is to be wished (though we have no demand upon him for such a condescension) that the ingenious Bishop had given us his idea of a substitute, for what he here represents as already exploded, as well as for what he imagines as soon likely to be so. Poetry, no doubt, in being thus deprived of these her magical supports, will lose much of her attraction. Yet, in the case of Davenant (supposing him amenable to a court of criticism), many palliations may be urged in his defence. There can scarcely subsist a doubt but that, in denying himself the opportunity of indulging his fancy in the appendages of divine assistance, the dignity of the poem has been considerably diminished: yet, if we recollect the situation he stood in as to time, it will appear that his conduct did not result from a perverse and affected determination of deviating from rules long established, and long approved, but from a serious and sensible conviction that such machinery as those rules supplied him with was no longer practicable. The spirit of common-sense, which in his day began to shew itself, would certainly have revolted against heathen mythology; the Gothic system, which the Italian school presented him with, was already hack-nied and worn out, and no longer fostered and kept alive by the relish for chivalry, which prevailed even when Spenser wrote; the religion of his country afforded no instance that might serve to keep him in countenance, or justify an application of such hallowed materials to so light, and perhaps so unworthy, a purpose. These united objections made (if I may be allowed the expression) a sort of poetical atheist of Davenant, and reduced him to the necessity of pursuing a plan of his own, and of relying on the natural powers of his genius. With his pen in his hand, he

seems boldly to have exclaimed, in the language of Mezentius,

"*Dextra mihi Deus et telum quod missile libro* (45)." (45) *Biographical Sketches prefixed to Headley's Collection, vol. i. p. xlviii, xlix.*

But the Gentleman who has most eminently laboured to rescue the Gondibert from oblivion, and to recommend its beauties to the attention of the world, is Dr. Aikin. This ingenious writer has devoted a long essay to the subject; and, after having vindicated the general method of the poem, in answer to Dr. Hurd's objections, he proceeds to a more particular analysis of it, the length of which shall not deter us from laying it before our readers; partly because it conduces so highly to Sir William Davenant's reputation, and partly because it affords so agreeable a specimen of candid and judicious criticism. It will, at the same time, communicate to many persons, such a knowledge of the Gondibert as is wholly new to them. "I should now hope," proceeds Dr. Aikin, "that the reader would set out with me upon a nearer inspection of this poem, with the general idea of its being the work of an elevated genius, pregnant with a rich store of free and noble sentiment, fashioned by an intimate commerce with the great world, and boldly pursuing an original, but not an unskilful plan."

"The measure chosen for this poem is that which we now almost confine to elegy. This choice does not appear very judicious; for although our elegiac stanza possesses a strength and fullness which renders it not unsuitable to heroic subjects, yet in a piece of considerable length, every returning measure must become tiresome from its frequent repetitions. And this is not the worst effect of returning stanzas, in a long work. The necessity of comprizing a sentence within the limits of the measure is the tyranny of Procrustes to thought. For the sake of a disagreeable uniformity, expression must constantly be cramped or extenuated. In general the latter expedient will be practised, as the easiest; and thus both sentiment and language will be enfeebled by unmeaning expletives. This, indeed, in some measure is the effect of rhyme couplets; and still more of the Latin hexameter and pentameter. In our author, a redundancy of thought, running out into parentheses, seems to have been produced, or at least encouraged by the measure. But I think he has generally preserved a force and majesty of expression."

"It would have been highly injudicious for one who has rejected all poetical machinery, to have begun his poem with the antient form of invoking a Muse. Indeed, in all modern writers this invocation appears little better than an unmeaning ceremony, practised by rote from antient custom; and very properly makes a part of the receipt for an epic poem humourously laid down after the exact model of mechanical imitation, in the Spectator. Our author, with simple and unaffected dignity, thus opens at once into his subject:

"Of all the Lombards, by their trophies known,
Who fought fame soon, and had her favour long,
King ARIBERT best seem'd to fill the throne,
And bred most business for heroick song.

"This conquering monarch, we are soon acquainted, was blest with an only child, the heroine of the story,

"Recorded RHODALINE! whose high renown
Who miss in books not luckily have read;
Or vex'd with living beauties of their own
Have shunn'd the wise records of lovers dead.

"Descriptions of female beauty have engaged the powers of poets in every age, who have exhausted all nature for imagery to heighten their painting; yet the picture has ever been extremely faint and inadequate. Our poet judiciously confines his description

and, in her dedication, she tells him, that his Royal Father was not displeased with her husband's writings, that the Queen his Mother graciously took him into her family, was diverted

tion of Rhodolind to the qualities of her mind, contenting himself with general praises, though in the high-flown gallantry of the times, of her personal charms.

" Her looks like empire shew'd, great above pride;
Since pride ill counterfeits excessive height:
But nature publish'd what she fain would hide,
Who for her deeds, not beauty, lov'd the light.

" To make her lowly mind's appearance less,
She us'd some outward greatness for disguise;
Esteem'd as pride the cloyst'ral lowliness,
And thought them proud who even the proud despise."

" Oppressors big with pride, when she appear'd
Blush'd, and believ'd their greatness counterfeit;
The lowly thought they them in vain had fear'd;
Found virtue harmless, and nought else so great.

" Her mind (scarce to her feeble sex a-kin)
Did as her birth, her right to empire show;
Seem'd careless outward when employ'd within;
Her speech, like lovers watch'd, was kind and low.

" The court of Aribert could not want men of high rank and accomplishments to pay their devotions at such a shrine. Among these "OSWALD the great, and greater GONDIBERT" moved in the most exalted sphere of renown. These noble personages are characterized and contrasted with so masterly a hand that it would be an injury not to transcribe the whole.

" In court Prince Oswald costly was and gay,
Finer than near vain kings their fav'rites are!
Outshin'd bright fav'rites on their nuptial day;
Yet were his eyes dark with ambitious care.

" Duke Gondibert was still more gravely clad,
But yet his looks familiar were and clear;
As if with ill to others never sad,
Nor tow'rd's himself could others practice fear.

" The Prince could porpoise-like in tempests play,
And in court storms on shipwreck'd greatness feed;
Not frightened with their fate when cast away,
But to their glorious hazards durst succeed.

" The Duke would lasting calms to courts assure,
As pleasant gardens we defend from winds;
For he who bus'ness would from storms procure,
Soon his affairs above his manage finds.

" Oswald in throngs the abject people sought
With humble looks; who still too late will know
They are ambition's quarry, and soon caught
When the aspiring eagle stoops so low.

" The Duke did these by steady virtue gain;
Which they in action more than precept taste;
Deeds shew the good, and those who goodness feign
By such even through their vizards are outfac't.

" Oswald in war was worthily renown'd;
Though gay in courts, coarsely in camps could live;
Judg'd danger soon, and first was in it found;
Could toil to gain what he with ease did give.

" Yet toils and dangers through ambition lov'd,
Which does in war the name of virtue own:
But quits that name when from the war remov'd,
As rivers theirs when from their channels gone.

" The Duke (as restless as his fame in war)
With martial toil could Oswald weary make,
And calmly do what he with rage did dare,
And give so much as he might deign to take.

" Him as their founder cities did adore;
The court he knew to steer in storms of state;
In fields a battle lost he could restore,
And after force the victors to their fate.

" Of these great rivals, Gondibert was he whom the King had destined for his son-in-law, and the heir of his throne; and Rhodolind too, in the privacy of her own breast, had made the same choice. This is related in a manner little inferior to Shakespeare's famous description of concealed love.

" Yet sadly it is sung that she in shades
Mildly as mourning doves love's sorrows felt;
Whilst in her secret tears her freshness fades,
As roses silently in lymbecks melt.

" Gondibert, however, though of a nature by no means unsusceptible of the tender passion, had not as yet felt it for a particular object; and Oswald, who stood forth as the public suitor to the Princess, was incited by no other motive than ambition. Not Rhodolind herself (says the Poet)

" Could he affect but shining in her throne.

" His cause was powerfully pleaded with the Princess by his sister Gartha, with whom we are next brought acquainted. A bold, full, majestic beauty; and a corresponding mind, high, restless, and aspiring, are her distinguishing features. The Prince and Duke were urged on to ambitious pursuits by their respective armies, which, just returned from conquest, lay encamped, the one at Brescia, and the other at Bergamo. That of Gondibert was composed of hardy youth whom he had selected from his father's camp, and educated in martial discipline under his own inspection. Temperance, chastity, vigilance, humanity, and all the high virtues of chivalry remarkably distinguish these young soldiers from those of later times. Beauty, indeed, commanded no less regard amongst them than in a modern camp; but it was an object of passion, and not of appetite; and was the powerful engine in their education which inspired them with noble and exalted sentiments. This is an idea on which our author, true to the principles of chivalry, very frequently enlarges, and always with peculiar force and dignity. In the present instance it is thus finely expressed.

" But tho' the Duke taught rigid discipline,
He let them beauty thus at distance know;
As priests discover some more sacred shrine,
Which none must touch, yet all to it may bow.

" When thus as suitors mourning virgins pass
Thro' their clean camp, themselves in form they draw,
That they with martial reverence may grace
Beauty, the stranger, which they seldom saw.

" They vail'd their ensigns as it by did move,
Whilst inward, as from native conscience, all
Worship'd the poet's darling godhead, Love;
Which grave philosophers did Nature call.

" Indeed, the influence of this passion in its purest and most exalted state, during the course of education, is a subject that might, perhaps, shine as much in the hands of a moralist as of a poet.

" The soldiers of Oswald were his father's brave veterans, in whose arms he had been bred. The story thus opened, and our attention awakened to the expectation of important events, the first canto is closed.

diverted by, and often smiled upon, his endeavours; and that the latter part of his life had been spent in the study and labour to entertain his Majesty and his Royal Highness.

"The second canto introduces us to a solemn annual hunting, held by Duke Gondibert in commemoration of a great victory gained on this day by his grandfire. His train was adorned by many gallant and noble persons, the friends of his family, and commanders in his army. The hunting, which is described with much poetical spirit, terminates in a combat. As Gondibert and his party are returning weary homeward, an antient ranger hastily brings the tidings that Oswald, who had lain in ambush with a body of chosen horse, is advancing upon them. The Duke, rejecting all counsels of flight, prepares to receive his foes; and with an account of their principal leaders, and the order of their march, the canto concludes.

"A parley between the chiefs now succeeds, in which the character of each is well preserved. Oswald warmly accuses his rival for usurping his claims on the Princess and the kingdom. Gondibert defends himself with temper, and disavows all ambitious designs. The other disdains accommodation; and the conference ends in a generous agreement to decide their differences in single fight.

"When every thing is prepared for the combat, Hubert, the brother of Oswald, steps forth with a general challenge to the opposite party. This is instantly accepted, and serves for a prelude to so many others, that a general engagement seems likely to ensue; when Oswald reproves their disobedient ardour: and, upon Hubert's insisting to share his fate from the rights of brotherhood, it is at length decided that three persons of each party should enter the lists along with their generals. The duel then comes on, in the fourth canto; in which Oswald, Hubert, Paradine and Dargonet, are severally matched with Gondibert; Hurgonil, the lover of Orna, the Duke's sister; and Arnold and Hugo, generous rivals in Laura. Descriptions of battle are so frequent in epic poetry that scarcely any circumstances of variety are left to diversify them. Homer and his imitators have attempted novelty in the multiplicity of their combats by every possible variation of weapon, posture, and wound. They considered the human body with anatomical nicety; and dwelt with a savage pleasure upon every idea of pain and horror that studied butchery could excite. I shall leave it to the professed admirers of antiquity to determine under what head of poetical beauty such objects are to be ranged. The terrible is certainly a principal source of the sublime; but a slaughter-house or a surgery would not seem proper studies for a poet. D'avenant has drawn little from them. His battles are rendered interesting chiefly by the character and situation of the combatants. When Arnold, the favoured lover of Laura, is slain by Paradine, Hugo, who had overthrown his antagonist, springs to avenge his rival, with these truly gallant expressions.

"Vain conqueror, said Hugo then, return!
Instead of laurel which the victor wears,
Go gather cypress for thy brother's urn,
And learn of me to water it with tears.

"Thy brother lost his life attempting mine;
Which cannot for Lord Arnold's loss suffice:
I must revenge, unlucky Paradine!
The blood his death will draw from Laura's eyes.

"We rivals were in Laura; but tho' she
My griefs derided, his with sighs approv'd,
Yet I, in love's exact integrity,
Must take thy life for killing him she lov'd.

"His generosity, however, was fatal both to his foe and himself.

"Hubert, disabled by a wound in his arm, is dishonoured by receiving his life from his conqueror; upon which occasion the poet thus beautifully apostrophises,

"O Honour, frail as life thy fellow flower!
Cherish'd and watch'd and hum'rously esteem'd,
Then worn for short adornments of an hour;
And is when lost, no more than life redeem'd.

"The two chiefs are still left closely engaging; and when Hurgonil approaches to assist his lord, he is warmly commanded to retire. At length, after many mutual wounds, Oswald falls.

"The death of the Prince at the same time takes off all restraint from his party, and incites them to revenge. Led by the wounded Hubert, old Vasco, and Borgio, they attack the hunters, who, besides the fatigue of the chase, are represented as somewhat inferior in number. A furious battle, the subject of the fifth canto, now ensues. Gondibert shines forth in all the splendor of a hero. By his prowess his friends are rescued, and the opposite leaders overthrown in various separate encounters; and by his military skill the brave veterans of Oswald are defeated. The whole description of the battle is warm and animated.

"In Gondibert's generous lamentation over the fallen, every heart must sympathize with the following pathetic tribute to the rival lovers.

"Brave Arnold and his rival strait remove,
Where Laura shall bestrew their hallow'd ground;
Protectors both, and ornaments of love;
This said, his eyes out wept his widest wound.

"Tell her now these, love's faithful saints, are gone
The beauty they ador'd she ought to hide;
For vainly will love's miracles be shown,
Since lover's faith with these brave rivals dy'd.

"Say little Hugo never more shall mourne
In noble numbers, her unkind disdain;
Who now, not seeing beauty, feels no scorn;
And wanting pleasure, is exempt from pain.

"When she with flowers Lord Arnold's grave shall strew,
And hears why Hugo's life was thrown away,
She on that rival's hearth will drop a few,
Which merits all that April gives to May.

"The Duke now draws off his remaining friends towards Bergamo: but on the journey, overcome by fatigue and loss of blood, he falls into a deadly swoon. His attendants, amidst their anxiety and confusion upon this event, are surprised, in the sixth canto, with the approach of a squadron of horse. This, however, proves to be a friendly body, led by old Ulfen; who, after recovering the Duke by a cordial, declares himself to have been a page to his grandfire, and gives a noble relation of the character and exploits of his great master. The rumour of Oswald's attack brought him to the relief of Gondibert; and we have a description, which will be thought too much bordering upon the ludicrous, of the strange confusion among his maimed veterans, who in their haste had seized upon each other's artificial limbs. This unsightly troop, with the deficiencies of hands, arms, legs and eyes, can scarcely, with all the poet's art, be rendered a respectable object. Such instances of faulty judgment are frequent in the writings of an age which was characterized by vigour of imagination rather than correctness of taste. Ulfen leads the Duke to the house of the sage Altragon, where, with the approach of night, the canto and the first book conclude.

"In the beginning of the second book, the poet carries us with Hurgonil and Tybalt and their noble lead, to Verona. The distant turrets first appearing, and then the great objects opening, one by one; the river, the palace, the temple, and the amphitheatre of Flaminius, form a landscape truly noble and picturesque. The view of the temple gives occasion

occasion to one of those elevated religious sentiments which dignify this poem.

" This to soothe heaven the bloody Clephes built;
As if heaven's king so soft and easy were,
So meanly hous'd in heaven, and kind to guilt,
That he would be a tyrant's tenant here.

" We have then a lively description of a city morning; with the various and uncertain rumours of the late event, among the people. The rest of the canto is employed in a debate, rather tedious, though intermixed with fine sentiments, concerning the propriety of granting funeral rites to those who had perished in the quarrel.

" The progress of the fatal news is traced in the next canto. Aribert appears sitting in council in all the regal dignity. Tybalt relates the story. The King in a majestic speech complains of the toils and cares of empire, and predicts the baneful consequences likely to ensue. A more interesting scene is then disclosed, in which Tybalt declares the melancholy events of the combat to Rhodolind and the other Ladies of the court. Great art is shown in the delicate ambiguity by which they are prepared to receive the tidings. Laura is overpowered by her loss; and calling on Arnold's name, is conveyed away by her female attendants. This tender scene of sorrow is finely contrasted by the abrupt entrance of Gartha, in all the wild pomp of mingled rage and grief.

" No sooner was the pity'd Laura gone,
But Oswald's sister, Gartha the renown'd,
Enters as if the world was overthrown,
Or in the tears of the afflicted drown'd.

" Unconquer'd as her beauty was her mind,
Which wanted not a spark of Oswald's fire;
Ambition lov'd but ne'er to love was kind;
Vex'd thrones did more than quiet shades desire.

" Her garments now in loose neglect she wore,
As suited to her wild dishevell'd hair.

" In the fury of her passion she breaks out into execrations against the innocent.

" Blasted be all your beauties, Rhodolind!
Till you a shame and terror be to sight;
Unwing'd be Love, and slow as he is blind,
Who with your looks poison'd my brother's sight!

" At length she mounts her chariot, and flies with the wings of revenge to the veteran camp at Brescia. The terror impressed on the people by her hasty departure is imaged with great sublimity.

" She seem'd their city's Genius as she pass'd,
Who, by their sins expell'd, would ne'er return.

" The third canto brings us to Brescia, where Hubert's arrival with the dead body of Oswald excites every emotion of surprize, grief and fury in the breasts of the brave veterans. They spend the night in this storm of contending passions; and at day-break assemble round the tent of Hubert, who by a noble harangue gives additional fire to their revenge. They instantly arm, and demand to be led to Bergamo; when Gartha arrives. She turns their vengeance against the court, where she represents the triumph of Gondibert's faction, and the dishonour cast upon their own. The rage discovered in her countenance, overpowering the symptoms of grief, is painted with amazing grandeur in the following simile:

" The Sun did thus to threat'ned nature show
His anger red, whilst guilt look'd pale in all,
When clouds of floods did hang about his brow;
And then shrunk back to let that anger fall.

" This tempest is, however, allayed in the next canto by the arrival of the wise Hermegild; who, though grown aged in war and politics, is possessed with a youthful passion for Gartha. He solemnly

binds his services to their party, for the reward of Gartha's love; but persuades them to submit to more cautious and pacific measures. Gartha returns with him to the court; and the funeral of Oswald with Roman rites, " Which yet the world's last law had not forbid," is described in the remaining part of the canto.

" From scenes of rage and tumult the poet then leads us to the quiet shades of philosophy in the house of Astragon. This change is not better calculated for the reader's relief, than for a display of the richness and elevation of the writer's mind. That the friend of Hobbes should despise the learned lumber of the schools will not be thought extraordinary; but that he should distinctly mark out such plans of acquiring knowledge as have since been pursued with the greatest success, may well be deemed a remarkable proof of high and comprehensive genius. In Astragon's domain is a retired building, upon which is written in large letters, GREAT NATURE'S OFFICE. Here sit certain venerable sages, stiled *Nature's Registers*, busied in recording what is brought them by a throng called their *Intelligencers*. These men are diversly employed in exploring the haunts of beasts, of birds, and of fishes, and collecting observations of their manners, their prey, their increase, and every circumstance of their œconomy. Near this place is NATURE'S NURSERY, stocked with every species of plants, of which the several properties and virtues are diligently examined. Is it not striking to find in the *house of Astragon* so exact a model of the *school of Linnaeus*?

" We are next led to the CABINET OF DEATH; a receptacle for skeletons and anatomical curiosities of every kind: and from thence, by a pleasing analogy, to the library, or, as it is termed, the MONUMENT OF BANISH'D MINDS. The feelings of his guests on entering this room are thus described;

" Where, when they thought they saw in well-fought books
Th' assembled souls of all that men held wise,
It bred such awful rev'rence in their looks
As if they saw the bury'd writers rise.

" The poet then goes through a particular survey of the authors, distinguished into their several periods, countries, and professions; in which he exhibits a great extent of learning, and, much more to his honour, a sound and liberal judgment of what is truly valuable in learning. Of this, his account of the polemic divines will be thought no unfavourable specimen.

" About this sacred little book did stand
Unwieldy volumes, and in number great;
And long it was since any reader's hand
Had reach'd them from their unfrequented seat:

" For a deep dust (which time does softly shed,
Where only time does come) their covers bear;
On which grave spiders streets of webs had spread,
Subtle, and slight, as the grave writers were.

" In these heaven's holy fire does vainly burn,
Nor warms, nor lights, but is in sparkles spent;
Where froward authors with disputes have torn
The garment seamless as the firmament.

" If the subjects of this canto appear more noble and elevated than those which usually employ the episodes of heroic poetry, that of the ensuing one must strike with still superior dignity. Having acquainted us with the philosophy of his admired sage, the poet now, by a beautiful kind of allegory, instructs us in his religion. Astragon had dedicated three temples, to PRAYER, to PENITENCE, and to PRAISE. The *Temple of Prayer* is described as a building quite plain, open, and without bells; since nothing should tempt or summon to an office to which our own wants invite us. The duty of *Penitence* being a severity unpleasing to nature, its temple is contrived, by its solemn and uncommon appearance, to catch the sense. It is a vast building of black marble, hung with black, and furnished with that

"dim religious light" which poets have so finely employed to excite kindred ideas of gloom and melancholy: but none, I think, have painted it with such strength of colouring as our author:

"Black curtains hide the glass; whilst from on high
A winking lamp still threatens all the room,
As if the lazy flame just now would die:
Such will the sun's last light appear at doom.

"A tolling bell calls to the temple; and every other circumstance belonging to it is imagined with great propriety and beauty.

"But the poet's greatest exertions are reserved for his favourite *temple of Praise*. A general shout of joy is the summons to it. The building in its materials and architecture is gay and splendid beyond the most sumptuous palace. The front is adorned with figures of all kinds of musical instruments; all, as he most beautifully expresses it,

"That joy did e'er invent, or breath inspir'd,
Or flying fingers touch'd into a voice.

"The statues without, the pictures within, the decorations, and the choir of worshippers, are all suited with nice judgment, and described with genuine poetry. This distinguished canto concludes with these noble stanzas, the sum and moral, as it were, of the whole.

"Praise is devotion fit for mighty minds;
The differing world's agreeing sacrifice;
Where heaven divided faiths united finds:
But Prayer in various discord upward flies.

"For Prayer the ocean is, where diversly
Men steer their course, each to a sev'ral coast;
Where all our interests so discordant be
That half-beg winds by which the rest are lost.

"By Penitence when we ourselves forsake,
'Tis but in wise design on piteous heav'n;
In Praise we nobly give what God may take,
And are without a beggar's blush forgiv'n.

"Its utmost force, like powder's, is unknown;
And tho' weak Kings excess of Praise may fear,
Yet when 'tis here, like powder, dangerous grown,
Heav'n's vault receives what would the palace tear.

"The last thought will be termed, in this cold age,
a conceit; and so may every thing that distinguishes
wit and poetry from plain sense and prose.

"The wonders of the *house of Astragon* are not yet exhausted.

"To Astragon heaven for succession gave
One only pledge, and BIRTHA was her name.

"This maid, her father's humble disciple and assistant, educated in the bosom of rural simplicity, is rendered a more charming object than even the renowned Rhodalind upon her throne.

"Courts she ne'er saw, yet courts could have undone
With untaught looks and an unpractis'd heart;
Her nets the most prepar'd could never shun,
For Nature spread them in the scorn of Art.

"But I check my desire of copying more from this exquisitely pleasing picture. My intention is to excite curiosity, not to gratify it. I hope I have already done enough for that purpose; and since the rest of this unfinished story may be comprized in a short compass, I shall proceed, with but few interruptions, to conclude a paper already swelled to an unexpected bulk.

"That the unpractis'd Birtha should entertain an unresisted passion for the noblest of his sex; and that Gondibert, whose want of ambition alone had secured him from the charms of Rhodalind, should bow to those of his lovely hostess and handmaid, will be thought a very natural turn in the story; upon which, however, the reader may foresee the most interesting

events depending. The progress of their love, though scarcely known to themselves, is soon discovered by the sage Astragon. This is expressed by the poet with a very fine turn of a common thought.

"When all these symptoms he observ'd, he knows
From Alga which is rooted deep in seas,
To the high Cedar that on mountains grows,
No sov'reign herb is found for their disease.

"The remainder of this poem, consisting of a third book written during the author's imprisonment, is composed of several detached scenes, in which the main plot lies ripening for future action. Rivals are raised in Birtha. Flattering advances from the court, and more open declarations of love from Rhodalind, are in vain employed to assail the constancy of Gondibert. Various conflicts of passion arise, and interesting situations, well imagined, and painted in lively colours. Much is given, as in the former parts, to the introduction of elevated sentiment; with one example of which I shall finish my quotations. Several well-born youths are placed about the person of Gondibert as his pages, whose education consists of the following great lessons from their lord.

"But with the early sun he rose, and taught
These youths by growing Virtue to grow great;
Shew'd greatness is without it blindly sought,
A desperate charge which ends in base retreat.

"He taught them Shame, the sudden sense of ill;
Shame, nature's hasty conscience, which forbids
Weak inclination ere it grows to will,
Or stays rash will before it grows to deeds.

"He taught them Honour, Virtue's bashfulness;
A fort so yieldless that it fears to treat;
Like power it grows to nothing, growing less;
Honour, the moral conscience of the great.

"He taught them Kindness; soul's civility,
In which, nor courts, nor cities have a part;
For theirs is fashion, this from falsehood free,
Where love and pleasure know no lust nor art.

"And Love he taught; the soul's stol'n visit made
Tho' froward age watch hard, and law forbid;
Her walks no spy has trac'd, nor mountain staid;
Her friendship's cause is as the loadstone hid.

"He taught them love of Toil; Toil which does keep
Obstructions from the mind, and quench the blood;
Ease but belongs to us like sleep, and sleep,
Like Opium, is our med'cine, not our food.

"The plot is at length involved in so many intricate and apparently unfathomable difficulties, that it is scarcely possible to conceive a satisfactory termination. Perhaps the poet was sensible of a want of power to extricate himself, and chose thus to submit to a voluntary bankruptcy of invention, rather than hazard his reputation by going farther. In his postscript, indeed, he excuses himself on account of sickness and approaching dissolution. However disappointed we may be by his abrupt departure from scenes which he has filled with confusion, we ought not to forget the pleasures already received from them. "If (says he to his reader, with more than the spirit of a dying man) thou art one of those who has been warmed with poetic fire, I reverence thee as my judge." From such a judicature, this NOBLE FRAGMENT, would, I doubt not, acquire for him what the critic laments his having lost, "the possession of that true and permanent glory of which his large soul appears to have been full (46)."

Whilst the preceding remarks will fully convince our readers, that there is a merit in the Gondibert, of which many of them had not, perhaps, the least apprehension, we must, at the same time, declare our opinion, that nothing can ever render it a popular poem. Dr. Aikin acknowledges, that it is defective in the execution. It is but too obviously apparent, he says, that Sir William Davenant's senti-

(46) Miscellaneous Pieces, in Prose, by J. and A. L. Aikin, p. 154—189.

ments are frequently far fetched and affected, and his expression quaint and obscure; and that these faults, together with the want of harmony in versification, will sufficiently account for the neglect into which the work is fallen, though interesting in its story, and thick-sown with beauties (47).

(47) *Ibid.* p. 152.

But though the Gondibert will still continue to be

generally neglected, this does not detract from the value of Dr. Aikin's criticism. Disquisitions of such a kind are eminently useful. They preserve the reputation of considerable men from sinking wholly into oblivion, and they occasion their works to be studied by a few choice spirits, who are above being carried away by the torrent of literary fashion. K.

D'AVENANT (CHARLES), the eldest son of Sir William Davenant, was born some time in the year 1656 (a), and received the first tincture of letters at the grammar school of Cheame, in the county of Surry, under the care of Mr. George Aldrich, of Cambridge (b). He gave very early proofs of an active and sprightly genius; and, though it must have been a great misfortune to him to lose, as he did, his father, when scarcely twelve years of age, yet care was taken to send him to Oxford to compleat his studies, where he became a Fellow-Commoner of Baliol-College in Midsummer Term 1671, but left that University without taking a degree (c). The first proof which the public received of his parts was a dramatic composition, written when he was about nineteen years of age, and which was received with great kindness by a very polite audience, and frequently acted afterwards with just applause (d) [A]. He had a considerable share in the theatre in right of his father, which, probably, induced him to turn his thoughts so early to the stage; yet he was not long detained either by that, or by the success of his play, in the flowery road of Poetry. On the contrary, he applied himself to the study of the Civil Law, in which he had the degree of Doctor conferred upon him by the University of Cambridge (e). He was elected, with James St. Amand, Esq; to represent the borough of St. Ives in Cornwall, in the first Parliament of King James II. which was summoned to meet May 19th, 1685 (f); and, about the same time, he was jointly empowered, with the Master of the Revels, to inspect all plays, to preserve the decorum of the Stage, by preventing any thing that might have a tendency to immorality from appearing thereon (g). He was also appointed a Commissioner of the Excise (h), and continued in that employment for nearly six years, that is, from 1683 to 1689; during which space that branch of the revenue was managed with great advantage to the Crown, as well as with great honour and fidelity by such as were intrusted with it, as he demonstrated to the public by comparing their conduct, and the consequences of it, with those of their successors; against which account, though there were some cavils raised, yet the facts contained therein could not be contradicted (i) [B]. His thorough acquaintance

(i) See this matter discussed in note [B].

[A] And frequently acted afterwards with just applause.] This single dramatick performance of our author has the following title:

I. CIRCE, a Tragedy, acted at his Royal Highness the Duke of York's theatre, Lond. 1677, 4to.

After the death of Sir William Davenant, those mischiefs, to which the theatre became exposed in his life-time, began to threaten its destruction. For the two companies, vying with each other, that of the Duke rather chose to make their court to the town by rich dresses, beautiful scenes, surprizing machinery, and other decorations of that sort, than play to thinner houses than usual, which served only to heighten that false taste, that has been always the bane of dramatick entertainments. To the introduction of these, this new piece was so far accommodated, that, notwithstanding its title, Mr. Langbaine says justly, that it was considered rather as an Opera; yet the subject suiting very well with the design, and the verses being written with great ease and spirit, it was with all these helps generally, if not universally, admired (1). The reader must observe, that it was not printed till two years after it was first acted, upon which occasion Mr. Dryden wrote a Prologue, and the Earl of Rochester an Epilogue, both beautiful pieces in their kind. In the former there was this fine apology for the author's youth and inexperience (2).

(1) English Dramatic Poets, p. 116.

(2) Original Poems and Translations, by John Dryden, Esq. vol. ii. p. 241.

Your Ben and Fletcher in their first young flight,
Did no *Volpone* nor no *Arbaces* write,
But hopp'd about, and short excursions made
From bough to bough, as if they were afraid;
And each was guilty of some slighted maid.
Shakespeare's own Muse her *Pericles* first bore,
'The Prince of Tyre' was elder than the Moor.
'Tis miracle to see a first good play,
All *hawthorns* do not bloom on *Christmas-day*.
A slender Poet must have time to grow,
And spread and burnish as his brothers do;

Who still looks lean sure with some pox is curst,
But no man can be *Falstaff* fat at first.
Then damn not, but indulge, his rude essays;
Encourage him, and bloat him up with praise;
That he may get more bulk before he dies,
He's not yet fed enough for sacrifice.
Perhaps if now your grace you will not grudge,
He may grow up to write, and you to judge.

[B] Yet the facts therein could not be contradicted.] It may be reasonably believed, though, at this distance of time, it cannot be positively affirmed, that this gentleman had some lesser employment in the Excise, before he was advanced to the rank of a Commissioner. It is to one of his adversaries that we are indebted for this circumstance, that Mr. Davenant came to the board at Midsummer 1683, when this part of the revenue, which for many years had been let to farm, came again into the hands of the Crown, and was delegated to six Commissioners (3). The history of their management, as given by Dr. Davenant himself, is what we have referred to in the text, and a small part of which we shall transcribe here, from which the reader will discern, that, when this gentleman undertook to give the publick his sentiments as to the management of the revenue, he was not either an ignorant or an impertinent pretender, but one who perfectly understood the matter which he promised to make plain, and pointed out the only method for correcting the errors of the administration that will ever be found practicable, viz. that of detecting the faults in particular departments, shewing whence they arise, and how they may be amended. Let the author now speak for himself, and tell us how that commission was executed while he remained a member (4).

When the excise was put from a farm into a commission, the Commissioners, at their first coming in, did not make any material change of officers, deferring that till they had better knowledge

(4) Discourses on the public Revenues and Trade of England, vol. i. p. 77.

with the laws and constitution of the kingdom, joined to his great skill in figures, and his happiness in applying that skill according to the principles advanced by Sir William Petty, for the perfecting Political Arithmetic, enabled him to enter deeply into the management of affairs, and procured him great success as a political writer (*k*). In all his pieces he reasons entirely upon Revolution principles, and pays the highest compliments to the personal virtues, and excellent abilities, of the Prince then upon the throne; notwithstanding which such as opposed him made no scruple of disputing his principles, and of maintaining, that his real view was to subvert the government, though he pretended to support it by exposing the errors of the Ministry (*l*). His performances in this kind, during the reign of King William, were very numerous; and, as they met with high approbation then, so the importance of the subjects of which they treat, and the singular and solid learning they contain, make them very much esteemed and valued even at this day. We shall give the reader the correctest catalogue we can of them in the notes [*C*]. It was in one

(*k*) Oldmixon's History of the Stuarts, vol. ii. p. 217.

(*l*) Animadversions on a late seditious book, intituled, *Essays on the Balance of Power*, &c. p. 5.

of those under them, and till they were more masters of their business; and by degrees, and with great caution, they weeded out such unqualified, corrupt, or negligent officers, as had been partially brought in during the former management, which was supine enough towards the latter end. And whereas the method of keeping the stock-books, and way of charging the people, were different almost in every collection, they settled one uniform method through the whole kingdom, taking that form for a pattern which had been made use of with most success in the best managed collections, which were Yorkshire, Wales, and the four northern counties.

To see which method put in execution, and to see such other directions performed as the Commissioners should afterwards give, they appointed four general Riders, and eight general Supervisors. But as a check above all, and which was indeed the life of their whole affair, the Commissioners themselves made frequent circuits round the kingdom, viewing every particular officer in his respective division, without which the inferior officers would have run into sloth, and the superior into corruption. And in these circuits they could observe who were remiss, who diligent, who deserved advancement, who wanted removing; and here they suited each man's district to his capacity, and, if their officers were corrupt, here they got true information of their proceedings.

But these Commissioners had done little good abroad with their inspection, if the officers had not been sensible, that they were overlooked by persons skilful in the matter, and able to hit a fault; for that Commissioner who rides abroad not fully possessed of his business, shall be hourly imposed upon by the inferior officers, and leave things in a worse order than he found them. They rarely made any addition of officers to increase the King's charge, but upon their own view in these circuits, and upon a full conviction that such increase of expence would turn to the King's account.

They took care to employ responsible men for their Collectors, by which means their accounts have been made up with very little supers upon any officer. In six years time they had got together twelve hundred Gaugers, active and skilful, and such a set of men, as perhaps, no Prince had ever a better employed in his revenue. And as to the commission itself, it was first composed of persons who all of them, some way or other, had been before conversant in the excise, and who agreed very well together; for in six years of that management, not one thing was ever put to the vote among them.

They were generally persons not above their employments, and who had no other business but the King's to follow; and they had a large salary which put them beyond corruption. Their management was impartial: no man was turned out to let in another, but upon strong proof, and the report of a Commissioner or General Officer upon the spot. So that he who was skilful and diligent, looked upon himself as in for life, for which reason they were served heartily and with affection.

Their management was uncorrupt; no place was sold, or suffered to be sold, under them; by which

they could pick and choose the best, and were entirely masters of their inferior officers. They were steady and constant in their proceedings, not giving out general orders one week and contradicting them the next.

They did not vex the people any where with unreasonable fines; and knowing the revenue in some measure to be precarious, they were not severe in London in exacting arrears, for fear that if they should bring any distress and trouble upon the London brewery, it would occasion the making ill drink, and so drive the people to brew themselves, which would destroy the duty.

These Commissioners did believe, that their skill, fidelity, and diligence, would always recommend them to any government, and keep them in their employments: they therefore quitted their private business and professions, to devote themselves wholly to the King's service, managing his revenue with the same care, affection, and frugality, as the father of a family would use in the ordering his own affairs, which occasioned my Lord Rochester, (no incompetent judge in those matters) at his leaving the Treasury, to take particular notice to the late King, how well that branch had been conducted.

But, after all, the success with which this management was attended, is chiefly to be attributed to the wisdom and steady conduct of those noble persons, who, while they governed at the head of the Treasury, in their several turns, did more at Whitehall towards keeping this branch in order, than was done in Broad-street. When the principal officers and Commissioners of every revenue were in a manner of their choosing, and under their direction, they took care that the King should be well and diligently served, and the publick tasted the benefit of that great power which was trusted with them. They had notice how each person attended or understood his business; they called every month to know what Commissioners were abroad surveying in the country; they looked into all transactions weekly, and took an exact account every quarter how the duty proceeded; and, in short, the strict eye which the Treasury kept over the Commissioners, rendered them watchful over their inferior officers; all which together made the revenue flourish.

To this high character of these Commissioners, he adds, by way of contrast, a very different one of those who succeeded them, and in respect to this he was very vigorously opposed by one, who had some particular reasons for vindicating their conduct whom the Doctor had exposed; but even this writer (*5*) does not at all contradict what had been advanced in reference to the behaviour of the first set of Commissioners while they were in office.

[*C*] The correctest catalogue we can of them in the notes. A certain writer tells us, that Dr. Davenant having laid wagers that the army of the allies would not succeed in Flanders, and particularly that they would not be able to take Namur (*6*), his losing them provoked him to draw his pen against the government, so that, if he is believed, private pique, and particular prejudices, were the source of this gentleman's publick spirit. His books however are penned in a manner very different from this, and seem to speak

(*5*) Remarks upon some wrong computations and conclusions, &c. p. 4.

(*6*) Oldmixon's History of the Stuarts, vol. ii. p. 118.

one of these books that the author suffered himself to be so carried away by his zeal, as to treat the Church, or, at least, some Church-men, in so disrespectful a manner, as to draw upon himself

speaking the writer very heartily desirous that the war then carried on should be attended with success, and the power of France humbled, without exhausting the strength of this nation. Such is the apparent view of his first political work.

II. *An Essay upon Ways and Means of supplying the War*, Lond. 1695, 8vo.

In this treatise he discovered his great capacity in the art of computation, and with much industry and pains pointed out the means of judging truly of the nature of funds, upon which important subjects he wrote with so much strength and perspicuity, as gained him great reputation, and sufficiently recommended to the publick whatever pieces came abroad by the author of *The Essay on Ways and Means*, which was the method Dr. Davenant took to distinguish most of his succeeding writings, as well as if he had put his name to them, which however, for some prudential reasons, he declined.

III. *An Essay on the East India Trade*, London, 1697, 8vo.

This, which was no more than a pamphlet, wore the form of a letter to the most honourable John Lord Marquis of Normanby, afterwards Duke of Buckinghamshire. In it the author gives a short and clear view of the importance of trade in general, and afterwards enters very fairly and freely into the nature of the trade to the East Indies, which he confesses to be detrimental to the inhabitants of Europe in general, but shews, that it may be advantageous to some particular nations, that it is so to England, and that the monopoly of this trade in the hands of the Dutch, might be worth to them six millions sterling annually. He likewise gives his reasons, why the prohibitions then intended of East India and Persia wrought silks, would be destructive to that trade in general, and hazard it's being utterly lost to the kingdom.

IV. *Discourses on the Publick Revenues, and of the Trade of England; by the author of the Essay on Ways and Means. Part I. To which is added, A Discourse upon improving the Revenue of the State of Athens, written originally in Greek by Xenophon, and now made English from the Original, with some Historical Notes; by another hand.* Lond. 1698, 8vo.

In this piece, the author undertakes to discover his sense upon the following very important topicks, viz. Of the use of political arithmetick, in all considerations about the revenue and trade. On credit, and the means and methods by which it may be restored. On the management of the King's revenues; Whether to farm the revenues may not, in this juncture, be most for the publick service? On the publick debts and engagements.

The Discourse on the Revenue of the State of Athens, was written by the famous Walter Moyle, Esq; and addressed by him to Dr. Davenant, in which address there occurs a passage, which shews that there were some thoughts of sending over our author in quality of Director-General to the East Indies, and is also a clear testimony, what that great man's notions were in reference to the real intentions, as well as great importance, of our author's writings. Speaking of what might be expected upon the conclusion of a peace with France, he says (7), 'Trade being of such mighty consequence to the interest of the nation, will, we hope, meet with due encouragement and protection from our laws, and will be settled under the ablest management and the wisest regulation. These branches of our commerce, which have been impaired or lost by the pyratick war, and the fatal interruption of our navigation, may be retrieved by the peace; and other trades, and particularly that with France, which the negligence, or the mistaken counsels of the last reigns, had settled upon a foot so destructive to our interest, may be established to our advantage in a new treaty of commerce. The great trade to the East Indies, with some few regulations, might be established upon a bottom more consistent with

VOL. IV.

the manufactures of England; but in all appearance this is not to be compassed, unless some publick spirited man (*), with a masterly genius, be placed at the head of our affairs in India; and though we, who are his friends, are loth to lose him, 'twere to be wished for the good of the kingdom, that the gentleman whom common fame, and the voice of the world, have pointed out as the ablest man for such a station, would employ his excellent judgment and talents that way, in the execution of so noble and useful a design. The general interest of a nation ought to be the care of particular men, the main bent of their studies, and the chief pursuit of their enquiries: every man ought to set his helping hand to such a work, and your own generous labours upon this subject have set an excellent pattern to the rest of the world.'

V. *Discourses on the Publick Revenues, and on the trade of England, which more immediately treat of the foreign traffick of this kingdom. By the author of the Essay on Ways and Means. Part II.* Lond. 1698, 8vo.

In this excellent work, the author has undertaken to explain four very important points, so as to render them perfectly intelligible even to common understandings. The first is the nature of foreign trade, in which he not only shews that it is really beneficial to this kingdom, but how it comes to be so, and what are the proper methods of enquiring, whether foreign trade is beneficial or not within any given period whatever. The second point is as to the care and protection of trade, in which a multitude of curious points are incidentally illustrated. The third point he labours, is that of the plantation trade, and in reference to this there are more useful observations advanced, and more important facts laid down, than are to be met with in the same compass in any book published in our language. The advantages and disadvantages which may be derived from the East India trade, or which it may be exposed to, is our author's topick in his fourth discourse, at the beginning of which he gives the following account of what he would have understood to be the scope and intention of all his writings (8). 'The author's aim is to deliver things plainly, without the disguise of hard words and terms, which rubbish being removed, the precious ore will sooner appear that is to be found in studies of this nature. His ends are compassed if he can set out intricate matters in an easy manner, hoping thereby to induce the young Nobility and Gentry of the kingdom to take a pleasure in these sort of contemplations, and he wishes this present performance did in any degree answer the desire he has of serving the publick.'

'Tis a great delight to him to observe, that many of our young Nobility and Gentry have expressed an inclination to inform themselves of the state of England, and that learning begins to be more in fashion than of late years, people being not ashamed now of understanding Greek and Latin. Nothing did more help to advance the Roman greatness, than that their youth were bred up to an early knowledge of their country's business, to which they attained by progressive steps, through several offices of the State, wherein they gained the experience that fitted them at last for the magistracies of chiefest trust and importance. They qualified themselves for the publick service, by seasoning betimes their understandings with the love of letters; for, in those days, whoever pretended to intermeddle in matters of government, did first cultivate his mind with wisdom and the precepts of Philosophy, by which afterwards he might steer his actions, giving to the search into useful arts or sublimer studies those hours, which, in this age, are consumed in riots and vain pleasures.

The young Nobility and Gentry not yet tainted, are the best hopes of a diseased Commonwealth. The warmth and spirit of such, must assist their measures who desire and are able to promote a right

8 C

(*) Dr. Davenant himself.

(8) Discourse on the public Revenues, and on the Trade of England, vol. ii. p. 320.

(7) In his introduction to the translation of that discourse of Xenophon.

himself a very unusual mark of censure from one of the Houses in Convocation (m) [D]. (m) Oldmixon's History of the It Stuarts, vol. ii. p. 222.

administration. And in national assemblies, it has been generally observed, that the young men are least infected with corruption; and that they would always follow truth, but for the false lights which crafty guides set up with a purpose to mislead them, for, while we are young, we are either ashamed, or have not leisure, to play the knave; but we come to it as age and discretion grow upon us.

The writer's aim is to stir up the youth of the kingdom to bend their thoughts to the study of trade and the publick revenues, that, being masters of the general notions of trade thereunto relating, they may not be misled by crafty and interested Merchants, or by ambitious and designing Politicians. When the youth of a nation have well informed their own reason, they follow her dictates, deliberating well and wisely for their King and country, without being hurried to and fro by the whirlwind of a prevailing faction.

In answer to this performance, more especially to what is advanced therein concerning the excise, there was published a pamphlet under the following title:

Remarks upon some wrong Computations and Conclusions, contained in a late tract, intituled, Discourses on the Publick Revenues, and on the trade of England, in a Letter to Mr. D. S. London, 1698, 8vo.

VI. *An Essay upon the Probable Methods of making the People Gainers in the Ballance of Trade. By the author of the Essay on Ways and Means. London, 1699, 8vo.*

In this discourse he insists upon the following heads, viz. Of the people of England. Of the land of England, and its product. Of our payments to the publick, and in what manner the balance of trade may be thereby affected. That a country cannot increase in wealth and power but by private men doing their duty to the publick, and but by a steady course of honesty and wisdom, in such as are trusted with the administration of affairs.

VII. *A Discourse upon GRANTS and RESUMPTIONS, shewing how our ancestors have proceeded with such Ministers, as have procured to themselves Grants of the Crown Revenue, and that the Forfeited Estates ought to be applied towards the Payment of Publick Debts. By the author of the Essay on Ways and Means. Lond. 1700, 8vo.*

In answer to this came out a very large and accurate work intituled,

JUS REGIUM: or, The King's Right to grant Forfeitures and other Revenues of the Crown, fully set forth, and traced from the beginning. His Majesty vindicated as to his Promise, concerning his Disposal of the Forfeited Estates. The manifold Hardships of the Resumption, and the little Advantage we shall reap by it, plainly demonstrated. Lond. 1701, 8vo.

VIII. *Essays upon the Ballance of Power; the Right of making War, Peace, and Alliances; Universal Monarchy. To which is added an Appendix, containing the Records referred to in the second Essay. London, 1701, 8vo.*

A very large and full answer to this work was published, under the title of

Animadversions on a late factious book, intituled, Essays upon the Ballance of Power, &c. with a Letter containing a Censure upon the said book, wherein the King, the Ministry, and the Church of England, are cleared from the malicious Aspersions cast upon them by the Enemies of this Government. Lond. 1701, 8vo.

(9) P. 5.

The author of this pamphlet tells us (9), that Dr. Davenant made himself conspicuous, and secured a great party in the nation, by his early quarrel to the government; upon account of the mal-administration of affairs; which he would persuade the world to be the result of his love to his country, when we all know his spleen has no other cause, than his having no more a share in the management of one of the branches of the revenue.

IX. *The true picture of a Modern Whig, in two Parts. Lond. 1701, 1702, 8vo.*

There is nothing but general report, founded upon the likeness of the stile and other circumstantial evi-

dence, to prove that this bitter pamphlet fell from the pen of our author; and, if it did, he must be allowed to have been the greatest master of invective that ever wrote in our language.

[D] *From one of the Houses in Convocation.* Our author, who is said by his enemies to have been a very warm party-man himself, and blamed for calculating most of his writings for the service of a party, makes it however the chief point in most of his books, and in that especially which drew upon him this misfortune, to shew, that no country can be happy while party subsists in it, and that government can never be well administered while in the hands of a party. To shew that this was the case at that time, more especially in the Church, he delivers himself in the following extraordinary flow of resentment (10):

(10) P. 39, 40.

As to religion, says he, 'tis notorious that many of those lately in play, have used their utmost endeavours to discountenance all Revealed Religion. They were more enraged at the Church party for believing in the Apostles Creed, than from the Tory principles some of them had advanced. Nothing but the subversion of all divine worship, could make way for that immorality which they intended to put in practice. All sort of Divines forbid the arts and ways by which they purposed to thrive; they were therefore to unsettle men in their opinions about religious matters, by which they hoped to prepare the minds, especially of the vulgar, to have different thoughts of vice and virtue than what they had heretofore entertained, which if they could have compassed, they did not doubt to be well esteemed of, as being the reverse of what honest and virtuous men ought to be, and acting quite opposite to what all religions have enjoined. They would have been safe indeed, and it would cover all their crimes, if nothing could be thought foul, treacherous, or dishonest, by which a man was to reap advantage, and if the people could have been once brought to think every thing good which they saw to prosper. Upon these grounds they have done their utmost to turn all religion to a jest. Do not we all know, that, in the midst of their prophane mirth, a modest Christian durst hardly put in a word in favour of the second person of the Trinity, without exposing himself to laughter? To hear 'em talk sometimes, one would imagine they believed a true Christian could not be a friend to the government. Good God! what a strange mixture of men have we lately seen upon the stage? irreligious Phanaticks, and arbitrary Republicans! Are not a great many of us able to point out to several persons, whom nothing has recommended to places of the highest trust, and often to rich BENEFICES and DIGNITIES, but the open enmity which they have, almost from their cradles, professed to the divinity of Christ?

What was done upon this will best appear, from transcribing part of the Journal of the Upper House of Convocation (11).

Sessio x. Die Sabbati 22 Martii.

The Most Reverend and Right Reverend Fathers being met in the Jerusalem Chamber, made their accustomed prayers to Almighty God. Which being done, the said Most Reverend produced a certain printed book, intituled, *Essays upon the Ballance of Power*, and after the reading of a certain paragraph in the fortieth page of the said book, the President and his Suffragans agreed, That the following paper should be fixed over several doors in Westminster-abbey.

March 22, 1700.

Whereas this day a book intituled *Essays upon I. The Ballance of Power. II. The Right of making War, Peace, and Alliances. III. Universal Monarchy, &c.* was brought into the Jerusalem Chamber, where his Grace the Archbishop of Canterbury, and the rest of Suffragan Bishops of his province, were assembled in Convocation:

(11) The Hist. of the Convocation of the Prelates and Clergy of the Province of Canterbury, Lond. 1702, 4to. p. 75.

It is not at all strange that one, who wrote upon such topics, and with so much freedom as he did, who censured boldly the measures he disapproved, and had sometimes the good fortune to find his sentiments espoused by the representatives of the nation, should feel the resentments of men in power, or be exposed to very harsh treatment from those who endeavoured to refute him, in order to gain their favour (n). But a different behaviour might be expected from such as undertake to write history, and who ought therefore to be very secure of their facts, before they deliver them as such to the public and to posterity: yet a certain writer bears very hard upon Dr. Davenant, for his conduct as a Member of Parliament in the reign of King William; tells us, that his circumstances were such as would have prevented him from having a seat after the act for qualifications took place; that the narrowness of them made it more than suspected he was bribed by Count Tallard, the French Minister; and instances, in a particular vote, where Dr. Davenant himself acknowledged he had given it against his conscience (o). Yet we find our author complaining in his books of being shut out of active life, and having no other way to benefit his country but by his pen (p), which would have been very strange language, if, at the same time, he had sitten in Parliament; but the truth of the matter is, that he did not obtain a seat in the reign of King William till the year 1698, when he was elected, with Francis Stonehouse, Esq; for the borough of Great Bedwin, as he was afterwards in the year 1700 (q); at which time also he wrote as warmly against France as any man; so that if the French Minister really allowed him a pension, he bestowed his money very ill; and the improbability of the fact makes better evidence necessary to prove it, than the bare assertion of an author very apt to be angry, and to believe, and say, any thing of those with whom he is angry. This is farther certain, that, in 1704, Dr. Davenant wrote a book, to shew the necessity of peace at home while a necessary war was carried on abroad; which he dedicated to Queen Anne (r), and which was supposed to be written at the desire of Lord Halifax; though the Historian before-mentioned tells us, that he despised the author, and would never have any confidence in him (s). This drew upon him the resentment of that party by whom he had been formerly esteemed, and who bestowed upon him as ill language, or rather worse, than he had received from his former opponents (t). He was afterwards appointed Inspector-General of the Exports and Imports (u), in which employment he gave a very high testimony of his abilities; so that, to speak with impartiality, he ought to be esteemed a person who served his country faithfully when in office, and usefully when out. As for his remaining works they will be mentioned in the notes [E]. It is presumed, that the care taken in representing fairly and fully the perform-

Convocation: in the 40th page of which book are these words, *Are not a great many of us able to point out, &c.*

It is desired by the said Archbishop and Bishops, that the author himself whoever he be, or any one of the great many to whom he refers, would point out to the particular persons whom he or they know to be liable to that charge, that they may be proceeded against in a judicial way, which will be esteemed a great service to the Church; otherwise the above-mentioned passage must be looked upon as a publick scandal.

THO. TYLLOTT,
Clericus Superioris Domus Convocationis.

[E] *They will be mentioned in the notes.* In this note we are to speak of such of our author's writings, as he published after the time that he is supposed to have reconciled himself to the Ministry.

X. *Essays upon Peace at home and War abroad, in two parts, by Charles Davenant, L. L. D.* Lond. 1704, 8vo.

Whatever the motives might be which induced our author to compose and publish this piece, it is very certain that it is one of the wisest and weightiest that ever fell from his pen. That he was not ashamed in any degree of this undertaking, appears from his putting his name to the book: and that he was as far from taking shame to himself on the score of his former writings or behaviour, appears very clearly from the following paragraphs in his Dedication to the Queen, which are therefore highly deserving the reader's notice.

'That for many years there have been parties in this kingdom is too evident, but 'twas what the best Patriots all along deplored, though formerly the mischief was hardly to be avoided: endeavours to keep up a great land force in times of peace, neglect of trade, general profusion, the spoils some had made

upon the publick, and their alienating crown lands to an immense value both here and in Ireland, could not but provoke them who were to feel the weight of present taxes and of future debts.

In a free nation such conduct will ever inflame the minds of men, and excite all true lovers of their country to exert their utmost strength in its rescue. These contests, to promote good government, and to carry on a bad one, divided the realm. The corruptions of the age were attacked with virtuous courage at first by thin squadrons, whose numbers increased from time to time, till at last they were strong enough to make such a stand, as prevented universal ruin. In the mean while, mismanagement was supported with more warmth than perhaps was either just or decent. And these struggles were no small interruptions to your immediate predecessor in his counsels, and in his business of the war.

And 'tis no wonder the face of the waters is not yet quite smooth: after a high storm there will remain an agitation of the waves for many hours. Ambition may be still at work, and some may yet be grasping at power, which they hope to compass by the aids and voices of their faction: but God has enriched your princely heart with such prudence, as soon discerns what most conduces to the happiness of the nations over which your sceptre is extended.'

XI. *Reflections upon the Constitution and Management of the Trade to Africa, through the whole Course and Progress thereof, from the Beginning of the last Century to this Time; wherein the Nature and uncommon Circumstances of that Trade are particularly considered, and all the Arguments urged alternately, by the two contending Parties here, touching the different Methods now proposed by them, for carrying on the same to a national Advantage, impartially stated and considered. By all which a clear view is given of such a Constitution, as (if established by Act of Parliament) would in all probability render the African Trade a permanent, creditable,*

652 D'AVENANT (CHARLES). D'AVENANT (WILLIAM).

performances of Dr. Davenant, whose merit, as a political writer, whatever his failings might be, has been always acknowledged, will prove acceptable to the public; the rather, because hitherto such accounts as have been given of his life and writings have been but very imperfect. (w) *Help to History*, vol. iii. p. 296.
Le Neve, Monumenta Anglicana, p. 293.

able, and advantageous Trade to Britain. Lond. 1709, fol. in three parts.

(12) Catalogue of the Library of Anthony Collins, Esq. vol. ii. p. 14.

There is indeed no name to any of these treatises, but it was very well known at the time they were published by whom they were written, and therefore in a large collection of tracts, in the hands of a person perfectly well acquainted with literary history, they had this title given them (12), *Dr. Davenant's Reflections on the Trade to Africa*, 3 parts, 1709. It must be acknowledged, that, exclusively of the reasonings and arguments advanced in this performance, and which have been frequently copied since; there are abundance of material facts, and curious pieces of History, which will render them always admired, and valued by those who are desirous of understanding the subject thoroughly, which they are intended to explain.

XII. *A Report to the Honourable the Commissioners for putting in execution the Act, intituled, an Act for the taking, examining, and stating the publick Accounts of the kingdom, from Charles Davenant, L.L.D. Inspector-General of the Exports and Imports.* Lond. 1712, 8vo. Part I.

XIII. *A second Report to the Honourable the Commissioners, &c.* Lond. 1712, 8vo.

(13) At the conclusion of that Report.

The last of these Reports is dated from the Inspector-General's office, Dec. 10, 1711 (13), and the design of both is, to give a general account of the trade of the kingdom from 1663 to 1710. This was the last work of our author, and contains in it a collection of facts of inestimable value to such as are willing to distinguish between rumour, or common opinion, and the true state of things, in reference to the commerce of Great Britain with her neighbours.

C.

* * [The first part of Dr. Davenant's discourses on the public Revenues and the Trade of England, was smartly attacked, in a piece, entitled, "Remarks upon some wrong computations and conclusions contained in a late tract, &c." To this publication, which appeared in 1698, was prefixed the following motto, taken from the Doctor himself: "Miserable is that country where the men of business do not reckon right."

Dr. Davenant's "true picture of a modern Whig" was carried on in a dialogue between Mr. Whiglove and Mr. Double, two under Spur-Leathers to the late ministry. The same design was afterwards prosecuted by him in another work, of which no notice has been taken by any of his former Biographers. It appeared in 1710, in two volumes, octavo, and is entitled, "New Dialogues upon the present posture of Affairs, the Species of Money, national

"Debts, public Revenues, Bank and East India Company, and the Trade now carried on between France and Holland. By the author of the Essay on Ways and Means." The nature of this performance, as well as the circumstance mentioned in the title page, ascertains it to be Dr. Davenant's. It is evidently a continuation of the true picture of a modern Whig. Tom Double, metamorphosed into Sir Thomas Double, composes a part of the Dramatis Personæ, and the attack upon the Whig party is pursued. The work is also full of that public information by which Davenant's writings are so much distinguished.

For the preceding intelligence, and the subsequent character of Dr. Davenant's productions, the present Editor of the Biographia is indebted to his ingenious friend, Sir John Sinclair, Bart. who has amply shewn, by his own valuable performances, that no one is better capable of judging upon the subject. "Davenant," says Sir John, "is certainly a most valuable political author; and considering that the modern system of politics, founded on a spirit of commerce, on public credit, on paper circulation, and on skill in finance, was then in a manner in its infancy, he undoubtedly was a writer whose progress was more advanced than could have been expected at that time. It appears from his works, that he had access to official information, from which he derived many advantages. He seems, however, to have depended too much upon political Arithmetic, or the strength of figures, which ought only to be resorted to, when the fact itself cannot be ascertained, being only a succedaneum when better evidence cannot be procured. He was unfortunately, also, a party writer, and saw every thing in the manner the best calculated to promote the views and purposes of his political friends at the time. Every thing they did was right, whilst every action of their enemies was ill-intended and ruinous. He possessed a very considerable command of language; and is sometimes too prolix; but on the whole there are certainly very few that can rival him as a political author."

In 1771, was published, in five volumes, octavo, "The political and commercial works of that celebrated writer Charles Davenant, L.L.D. relating to the Trade and Revenue of England, the Plantation Trade, the East-India Trade, and the African Trade. Collected and revised by Sir Charles Whitworth, Member of Parliament. To which is annexed, a copious Index." This publication has greatly contributed to the diffusion and utility of the Doctor's writings.

K.

D'AVENANT (WILLIAM), younger brother to the former, and fourth son to Sir William Davenant; was educated at Magdalen Hall, in the University of Oxford, where he took the degree of Bachelor of Arts, July 19th, 1677 (a). He translated into English from the French a book, intituled, *Animadversions upon the famous Greek and Latin Historians*, written by the celebrated Mr. la Mothe le Vayer (b), who was Tutor to the French King Louis XIII; which was very well received. He took the degree of Master of Arts July 5th, 1680 (c), and about the same time entering into holy orders, was presented to a living in the county of Surrey, by his patron Robert Wymondsole, of Putney, Esq; with whom he travelled into France; and in the summer of the year 1681, as he was diverting himself by swimming in a river near Paris, he was unfortunately drowned in the sight of his Pupil, to the great regret of all who knew him, having added to great natural parts, by an assiduous application to study, as much sound learning and true knowledge as could be expected in a person so young.

C.

* * [DAVIES (SIR JOHN), an eminent Lawyer, Poet, and Political Writer, was born at Chisgrove, in the parish of Tisbury, in Wiltshire (a). He was the third son of John Davies, who is said by Anthony Wood to have been a wealthy Tanner; but in the books, which record the admission of the son into the Society of the Middle Temple, it is said that the father was "late of New Inn, Gentleman (b)." Young Davies, in 1585, when he

was

was in the fifteenth year of his age, was entered a Commoner of Queen's College, Oxford. Here he had the advantage of a good Tutor, and being possessed of excellent natural abilities, and applying himself closely to his studies, he made a considerable proficiency in literature. At the beginning of the year 1588, he removed to the Middle Temple; but he appears to have returned occasionally to Oxford; for in 1590, he took the degree of Bachelor of Arts (c). At the Temple, he applied himself to the study of the law; but he was more distinguished by his abilities, than by the regularity of his manners. "He interrupted," it is said, "the quiet of the Inn, by misdemeanours, for which he was fined, and by disorders, for which he was removed from commons (d)." However, in July, 1595, he was called to the bar; but in February, 1597-8, he was expelled the Society of the Middle Temple. Wood says, "that he being a high-spirited young man, did, upon some little provocation, or punctilio, bastinado Richard Martin, afterwards Recorder of London [A], in the Common-hall of the Middle Temple, while he was at dinner. For which act being forthwith expelled, he retired for a time in private, lived in Oxon in the condition of a sojourner, and followed his studies, though he wore a cloak (e)." Davies's misconduct appears to have retarded his progress at the bar, and involved him in difficulties which led him to serious reflexion [B]. But he seems never to have been inattentive to literature. Besides the study of the law, he also particularly applied himself to poetry, and wrote, under the title of "Hymns of Aftrea," twenty-six acrostics, in honour of Queen Elizabeth. These pieces contain much poetry, and much flattery, and are greatly superior to the generality of compositions of this kind. His poetical talents now excited the attention of the Court, and when Sir Robert Cecil was to make an entertainment for the Queen, Mr. Davies was summoned to furnish his share of gratulations (f). But in 1599, he published, in 4to. his *Nosce Teipsum*, or Poem on the Immortality of the Soul [C], a performance of considerable merit, and which completely established his poetical reputation.

Mr.

[A] Richard Martin, afterwards recorder of London.] The writer of Davies's Life, prefixed to his Historical Tracts, observes, that "Davies and Martin were both poets, and both wits, a race more forward to offend than patient to suffer: and the facetiousness of Martin, which set the Temple table in a roar, and is said to have charmed King James, probably incited the indignation rather than the mirth of Davies (1)." Wood says, that "there was no person in his time more celebrated for ingenuity than Richard Martin, none more admired by Sel-den, Serjeant Hoskins, Ben Johnson, &c. than he; the last of which dedicated his comedy to him, called *the Poetaster*. King James was much delighted with his facetiousness, and had so great respect for him, that he commended him to the citizens of London to be their Recorder (2)." He published some poems, and several of his speeches in Parliament were also printed. He died in 1618, when he had not been elected to the office of Recorder much more than a month (3).

[B] Difficulties which led him to serious reflexion.] In the introduction to his *Nosce Teipsum* are the following stanzas:

' If aught can teach us aught, affliction's looks,
' (Making us pry into ourselves so near)
' Teach us to know ourselves beyond all books,
' Or all the learned schools that ever were.

' This mistress lately pluck'd me by the ear,
' And many a golden lesson hath me taught;
' Hath made my senses quick, and reason clear;
' Reform'd my will, and rectify'd my thought.

' So do the winds and thunders cleanse the air;
' So working seas settle and purge the wine;
' So lopp'd and pruned trees do flourish fair;
' So doth the fire the drossy gold refine.

' Neither Minerva, nor the learned Muse,
' Nor rules of art, nor precepts of the wise,
' Could in my brain those beams of skill infuse,
' As but the glance of this dame's angry eyes.

' She within lifts my ranging mind hath brought,
' That now beyond myself I will not go;
' Myself am center of my circling thought,
' Only myself I study, learn, and know (4).'

VOL. IV.

[C] Poem on the Immortality of the Soul.] To the second edition of this poem, printed in 4to. in 1602, is the following title: '*Nosce teipsum*. This oracle expounded in two Elegies. I. Of Human Knowledge. II. Of the Soul of Man, and the Immortality thereof.' A third edition was printed, in folio, in 1688; and a fourth was published, in 8vo. in 1697, by N. Tate, who says in the preface, 'The author of this poem merits a lasting honour; for, as he was a most eloquent lawyer, so, in the composition of this piece, we admire him for a good poet and exact philosopher. 'Tis not rhyming that makes a poet, but the true and impartial representing of virtue and vice, so as to instruct mankind in matters of greatest importance. And this observation has been made of our countrymen, that Sir John Suckling wrote in the most courtly and gentleman-like style; Waller in the most sweet and flowing numbers; Denham with the most accurate judgment and correctness; Cowley with pleasing softness, and plenty of imagination: None ever uttered more divine thoughts than Mr. Herbert; none more philosophical than Sir John Davies.'

In this poem the following illustration is given of the faculties of seeing and hearing, and of the uses made of those faculties by the human soul:

' First, the two EYES, which have the seeing pow'r,
' Stand as one watchman, spy, or sentinel,
' Being plac'd aloft, within the head's high tow'r;
' And tho' both see, yet both but one thing tell.

' These mirrors take into their little space
' The forms of moon and sun, and ev'ry star,
' Of ev'ry body, and of ev'ry place,
' Which with the world's wide arms embraced are.

' Yet their best object, and their noblest use,
' Hereafter in another world will be,
' When God in them shall heavenly light infuse,
' That face to face they may their Maker see.

' Here are they guides, which do the body lead,
' Which else would stumble in eternal night:
' Here in this world they do much knowledge read,
' And are the casements which admit most light.

8 D

' They

Mr. Davies's attachment to the muses did not prevent the continuance of his application to the studies and business of his profession; and in Trinity term, 1601, by the interest of Lord Ellesmere, Lord Keeper of the Great Seal, after having made proper submissions, he was again restored to his Chamber in the Middle Temple^(g). He was also chosen a Member of the House of Commons, for Corfe-castle in Dorsetshire, in the last Parliament of Elizabeth, which assembled on the 27th of October, in the same year. He appears to have been an active and useful Member of Parliament, and a supporter of the privileges of the House. He particularly distinguished himself in the great debate about [D] monop-

(g) *Ibid.* p. 3.
Alb. Oxon. 22
supra.

- They are her farthest reaching instrument,
• Yet they no beams unto their objects send;
• But all the rays are from their objects sent,
• And in the eyes with pointed angles end.
- If th' objects be far off, the rays do meet
• In a sharp point, and so things seem but small:
• If they be near, their rays do spread and fleet,
• And make broad points, that things seem great
• withal.
- Lastly, nine things to *fight* required are;
• The *pow'r* to see, the *light*, the *visible* thing,
• Being not too *small*, too *thin*, too *nigh*, too *far*,
• Clear space and *time*, the form distinct to bring.
- Thus see we how the *soul* doth use the *eyes*,
• As instruments of her quick power of sight:
• Hence doth th' arts *optic*, and fair *painting* rise;
• *Painting*, which doth all gentle minds delight.
- Now let us hear how she the *EARS* employs:
• Their office is, the troubled air to take;
• Which in their mazes forms a sound or noise,
• Whereof herself doth true distinction make.
- Those wickets of the soul are plac'd on high,
• Because all sounds do lightly mount aloft;
• And that they may not pierce too violently,
• They are delay'd with turns and windings oft.
- For should the voice directly strike the brain,
• It would astonish and confuse it much;
• Therefore these plaits and folds the soul restrain,
• That it the organ may more gently touch.
- As streams, which with their winding banks do
• play,
• Stopp'd by their creeks, run softly thro' the
• plain:
- So in th' ear's labyrinth the voice doth stray,
• And doth with easy motion touch the brain.
- This is the slowest, yet the daintiest sense;
• For e'en the ears of such as have no skill,
• Perceive a discord, and conceive offence;
• And knowing not what's good, yet find the ill.
- And tho' this sense first gentle music found,
• Her proper object is the *speech* of men;
• But that speech chiefly which God's heralds found,
• When their tongues utter what his spirit did pen.
- Our eyes have lids, our ears still ope we see,
• Quickly to hear how ev'ry tale is prov'd:
• Our eyes still move, our ears unmoved be;
• That tho' we hear quick, we be not quickly
• mov'd.
- Thus by the organs of the *eye* and *ear*,
• The *soul* with knowledge doth herself endue:
• Thus she her *prison* may with pleasure bear,
• Having such *prospects* all the world to view (5).⁽⁵⁾

(5) Poetical
Works of Sir
John Davies,
p. 46—49. edit.
1773.

(6) *Ibid.* p. 35,
36.

It is observable that Sir John Davies, in this poem, introduces some arguments grounded on the doctrine of original sin, and which he illustrates and supports from the principles of the law of England (6). In the course of the poem he has given the different arguments in defence of the immateriality and immortality of the soul, and adorned and illustrated those arguments with a great variety of poetical

images. Of the strong desire and expectation of future happiness implanted in the human mind, he thus expresses himself:

- Doubtless, all souls have a surviving thought,
• Therefore of death we think with quiet mind;
• But if we think of being turn'd to nought,
• A trembling horror in our souls we find.—
- Hence springs that universal strong desire,
• Which all men have of immortality:
• Not some few spirits unto this thought aspire,
• But all men's minds in this united be.
- Then this desire of nature is not vain,
• She covets not impossibilities;
• Fond thoughts may fall into some idle brain,
• But one assent of all, is ever wise.
- From hence that gen'ral care and study springs,
• That launching, and progression of the mind,
• Which all men have so much of future things,
• That they no joy do in the present find.
- From this desire, that main desire proceeds,
• Which all men have surviving fame to gain,
• By *tombs*, by *books*, by memorable *deeds*;
• For she that this desires, doth still remain.
- Hence, lastly, springs care of posterities,
• For things their kind would everlasting make:
• Hence is it, that old men do plant young trees,
• The fruit whereof another age shall take.

- If we these rules unto ourselves apply,
• And view them by reflection of the mind,
• All these true notes of immortality,
• In our heart's tables we shall written find (7).⁽⁷⁾

(7) *Ibid.* p. 76.
79, 80.

In the composition of this poem, it is observed, in the preface to Tate's edition, that "our author is beholden to none but himself." It has, however, been conjectured, and the supposition seems not improbable, that Sir John Davies derived some hints for his work from the fourteenth and fifteenth chapters of Philip de Mornay's treatise on the truth of the Christian religion, of which an English translation was printed at London in 4to. in 1587. It is said in a note to the edition of the *Nosce Teipsum*, printed with Sir John Davies's other poetical works in 1773, that this poem is, "without dispute, except Spenser's *Faery Queen*, the best that was written in Queen Elizabeth's, or even in King James the First's time."

[D] *Debate about Monopolies.* Queen Elizabeth had granted to her servants and courtiers a great number of patents for various monopolies, which were found to be very pernicious to the nation, and which were in consequence strongly and justly opposed. A petition from the parliament was presented to the Queen, complaining of these patents; but she persisted in defending her monopolists against the people. A bill was, therefore, brought into the House of Commons, for the abolition of all these monopolies; and as the petition to the Queen had been unsuccessful, a law was properly insisted on, as the only certain expedient for correcting these abuses. But the courtiers maintained, that this matter regarded the prerogative, and that the Commons could not hope for success in any other way but by petition to her Majesty (8).

(8) D'Ewes's
Journal of De-
bates in Parlia-
ment, in the
Reign of Queen
Elizabeth,
p. 649.

lies,

lies, insisting, that the House ought to proceed against them by Bill, and not by Petition [E].

On the death of Queen Elizabeth, Mr. Davies accompanied Lord Hunsdon into Scotland, when that Nobleman went thither to congratulate King James, on his accession to the Throne of England [F]. Being introduced into his Majesty's presence, the King inquired of Lord Hunsdon the names of the Gentlemen who were with him; and his Lordship naming among them John Davies, who stood behind, the King immediately asked, whether he was *Nosce Teipsum*, alluding to the title of his poem on the immortality of the soul. Lord Hunsdon informed him that he was the same; upon which the King, as Wood informs us, "graciously embraced him, and thenceforward had so great a favour for him, that soon after he made him his Solicitor, and then his Attorney-General in Ireland (b)."

(b) *Art. Oxon.*
vol. i. fol. 506.

It was in 1603, that Mr. Davies was sent as Solicitor-General to Ireland, and his appointment to the office of Attorney-General took place soon after. During his residence in that kingdom, he travelled through all the provinces of it, and made himself very accurately acquainted with the state of the people and of the country. He was also appointed one of the Justices of Assize [G], and appears to have discharged the duties of his office

[E] *By bill, and not by petition*] "Mr. Davies moved the House first, That he for his part thought the proceeding by bill to be most convenient; for the precedent in the 50 Edwardi 3. warranteth the same: And, therefore, (said he) let us do generally and bravely, like parliament men; and ourselves send for them, and their patents, and cancel them before their faces; arraign them, as in times past, at the bar, and send them to the Tower; there to remain, until they have made a good fine to the Queen, and made some part of restitution to some of the poorest that have been oppressed by them (9)."

When the Queen found, that the debates grew high in the House of Commons concerning the monopolies, and that the discontents of the people concerning them were very great, she sent for the Speaker, and desired him to inform the House, that she would immediately cancel these obnoxious patents. She also issued a proclamation against the monopolies that were complained of; upon which a deputation was sent to return her Majesty thanks. Elizabeth made a speech on this occasion to the Speaker, and the members who accompanied him, in which were the following passages: "I do assure you, that there is no Prince that loveth his subjects better, or whose love can countervail our love. There is no jewel, be it of never so rich a price, which I prefer before this jewel, I mean your love; for I do more esteem it than any treasure or riches." "Of myself I must say this, I never was any greedy, scraping grasper, nor a strait fast-holding Prince, nor yet a waster; my heart was never set on worldly goods, but only for my subjects good. What you do bestow on me, I will not hoard it up, but receive it to bestow on you again. Yea, mine own properties I count yours, to be expended for your good." "Since I was Queen, yet did I never put my pen to any grant, but that upon pretext and semblance made unto me, that it was both good and beneficial to the subjects in general, though a private profit to some of my antient servants who had deserved well. But the contrary being found by experience, I am exceedingly beholden to such subjects as would move the same at first. And I am not so simple to suppose, but that there be some of the lower House, whom these grievances never touched; and for them I think they speak out of zeal to their countries, and not out of spleen or malevolent affection, as being parties grieved; and I take it exceeding grateful from them, because it gives us to know that no respects or interests had moved them, other than the minds they bear to suffer no diminution of our honour, and our subjects love unto us. The zeal of which affection tending to ease my people, and knit their hearts unto me, I embrace with a princely care: far above all earthly treasure I esteem my people's love, more than which I desire not to merit (10)."

[F] *To congratulate King James, on his accession, &c.*] While Davies was in Scotland on this occasion, he received a letter from Mr. Francis Bacon, afterwards the celebrated Viscount of St. Alban's, in which is the following passage:

"I commend myself to your love, and the well using my name; as well in repressing and answering for me, if there be any biting or nibbling at it in that place, as in imprinting a good conceit and opinion of me, chiefly in the King, of whose favour I make myself comfortable assurance, as otherwise in that court: and not only so, but generally to perform to me all the good offices which the vivacity of your wit can suggest to your mind, to be performed to one, with whose affection you have so great sympathy, and in whose fortune you have so great interest. So desiring you to be good to concealed poets, I continue
"Your assured friend,
"FR. BACON (11)."

(*) Bacon seems to speak of himself here as a concealed poet, as having made some poetical attempts which he did not think proper openly to avow.

(11) Lord Bacon's Works, vol. iii. p. 222. edit. 4to. 1765.

There appears at this time to have been a considerable intimacy between Bacon and Davies; and a letter is still preserved from the former to the latter, written when Davies was Attorney-General in Ireland, in which Bacon says, "I would be glad to hear often from you, and to be advertised how things pass, whereby to have some occasion to think some good thought; though I can do little, at least it will be a continuance in the exercise of our friendship, which on my part remaineth encreased, by that I hear of your service, and the good respect I find towards myself (12)." It is observed by the writer of Davies's life, that "this correspondence continued while Davies could be of use to Bacon; but it ceased when Bacon had advanced before Davies in the rank of their profession. Such is the instability of friendships between men who run for the same prize; whether for the distinctions of literature, or for the honours of life (13)."

(12) Life of Davies, prefixed to his Historical Tracts, p. 10.

(13) *Id. ibid.*

[G] *He was also appointed one of the justices of assize.*] Sir John Davies himself informs us, that in Ireland, soon after the accession of King James I. By a general act of state, called the Act of Oblivion, published by proclamation under the Great Seal, all offences against the Crown, and all particular trespasses between subject and subject, done at any time before his Majesty's reign, were (to all such as would come in to the justices of assize by a certain day, and claim the benefit of this act) pardoned, remitted, and utterly extinguished, never to be revived or called in question. And by the same proclamation, all the Irish (who, for the most part, in former times, were left under the tyranny of their lords and chieftains, and had no defence or justice from the Crown) were received into his Majesty's immediate protection. This bred such comfort and security in the hearts of all men, as thereupon ensued the calmest and most universal peace that ever was seen in Ireland. The public peace being thus established, the state proceeded next to establish the public justice in every part of the realm: and to that end, Sir George Cary (who was a prudent governor, and a just, and made a fair entry into the right way of reforming this kingdom) did, in the first year of his Majesty's reign, make the first Sheriffs that ever were made in Tyrone and Tyrconnel; and, shortly after, sent

(9) Townshend's Hist. Collections of the Four last Parliaments of Queen Elizabeth, p. 244.

(10) D'Ewes, ut supra, p. 659.

office with great diligence and ability. He returned, however, occasionally to England; and, in Trinity term, 1606, was called to the degree of Serjeant at Law, and on the 11th of February, 1607, received the honour of knighthood (i). The same year the Lord-Deputy of Ireland, having determined to make a judicial progress through the counties of Monaghan, Fermannagh, and Cavan, joined Sir John Davies with the Chief Justice, as one of the Judges of assize, for performing this unwelcome service (k). An elaborate account of this circuit [H] was drawn up by Sir John Davies, and addressed to Robert Cecil, Earl of Salisbury, who had contributed to his advancement in Ireland.

(i) Life prefixed to his Historical Law Tracts, p. 12.

(k) *Id. ibid.*

In

‘ sent Sir Edmund Pelham, chief baron, and myself thither, the first justices of assize that ever sat in those countries; and in that circuit we visited all the shires of that province besides: which visitation, though it was somewhat distasteful to the Irish Lords, was sweet and most welcome to the common people; who, albeit they were rude and barbarous, yet did they quickly apprehend the difference between the tyranny and oppression under which they lived before, and the just government and protection which we promised unto them for the time to come (14).’

(14) Historical Tracts, p. 209, 210.

[H] *An elaborate account of this circuit, &c.* This was first printed, from a copy among the Harleian MSS. in the edition of his Historical Tracts, published in 1786. The following title is prefixed to it: “A letter from Sir John Davies, Knight, Attorney-General of Ireland, to Robert Earl of Salisbury, touching the state of Monaghan, Fermannagh, and Cavan; wherein is a discourse concerning the Corbes and Irenaghs of Ireland.” In this letter, after having given some account of the condition in which the counties of Monaghan, Fermannagh, and Cavan were, Sir John Davies says, “I thought it not impertinent to shew unto your Lordship how unsettled the possession of those counties were, before my Lord-Deputy began his journey; that it may appear, how needful it was, that the Lord-Deputy should descend in person to visit those counties, whereby he might have opportunity to discover and understand the true and particular state, both of the possessions and possessors thereof, before he gave warrants for passing the same by letters patent unto any; and thereby prevent that error, which had formerly been committed in passing all Tyrone to one, and Tyrconnel to another, and other large territories to Odogherly and Randal M’Sorley, without any respect of the King’s poor subjects who inhabit and hold the lands under them; whereby the patentees are made little Kings, or rather tyrants over them: inasmuch as they now being wooed and prayed by the state, cannot yet be drawn to make freeholders for the service of the commonwealth, which, before the passing of their patents, they would gladly and humbly have yielded unto. The state, therefore, of the three counties before named, standing in such terms as I have before expressed; my Lord-Deputy, accompanied with the Lord-Chancellor, the Lord Chief-Justice, Sir Oliver Lambert, and Sir Garret Moore, and being also waited upon by myself, who was for this service joined in commission of assize and gaol delivery with the Chief Justice, began his journey the nineteenth day of July last, being Saturday, and lodged that night and the next at the Abbey of Mellifont, Sir Garret Moore’s house. On Monday night his Lordship camped in the field, upon the borders of Ferney, which is the inheritance of the Earl of Essex; and albeit we were to pass through the wildest and wildest parts of all the North, yet we had only for our guard six or seven score foot, and fifty or three score horse, which is an argument of a good time, and of a confident deputy. For in former times (when the state enjoyed the best peace and security) no Lord-Deputy did ever venture himself into those parts without an army of eight hundred or one thousand men. The third night after our departure from Mellifont, we came to the town of Monaghan, which doth not deserve the name of a good village, consisting of divers scattered cabins, or cottages, whereof the most part are possessed by

‘ the cast soldiers of that garrison. In the north-most part thereof there is a little fort, which is kept by the foot company of Sir Edward Blaney, who is seneschal or governor of that county by patent. In the midst of this village, there is a foundation of a new castle, which being raised ten or twelve feet from the ground, and so left and neglected for the space of almost two years, is now ready to fall into ruin again; albeit his Majesty’s charge in building hath already been twelve hundred pounds at least. My Lord-Deputy was as much displeased at the sight thereof, as the chief Lords of the country are pleased and comforted therewith; because if it were erected and finished in that form as was intended, it would at all times be a bridle unto their insolency: for the M’Mahounes undoubtedly are the proudest and most barbarous sept among the Irish; and do ever soonest repine, and kick, and spurn at the English government. My Lord-Deputy having pitched his tents about a quarter of a mile from the town, did presently distinguish the business that was to be done; the determining of matters of the crown, and the hearing of personal petitions touching debt and trespass, he left wholly to the justices of the assize and gaol delivery; and reserved only to himself, and the Lord Chancellor, the consideration of such petitions as should be made unto him, touching the lands and possessions of that country (15).’

(15) Historical Tracts, p. 239, 240, 241.

Sir John Davies also takes notice in this letter of a commission which had been sent from England, one object of which was, “to take order for the re-edifying and the repairing of the churches, and for the placing of sufficient incumbents therein.”—“This point of that commission,” says he, “was not before time put in execution any where, albeit it was sundry times moved at the council table, that somewhat might be done therein: but my Lords the Bishops that sit at the board, being not very well pleased that laymen should intermeddle with ecclesiastical matters, did ever answer that motion in this manner: Let us alone with that business; take you no care for that; we will see it effected, we warrant you. Notwithstanding there hath been so little care taken, as that the greatest part of the churches within the pale lie still in their ruins; so as the common people (whereof many without doubt would conform themselves) have no place to resort unto, where they may hear divine service. This consideration moved us to inquire of the state of the church in these unreformed counties. The inquisition presented unto us in this county was in Latin, because the principal jurors were vicars and clerks. It appeared, that the churches for the most part are utterly waste; that the King is patron of all; and that the incumbents are Popish priests, instituted by Bishops authorized from Rome; yet many of them, like other old priests of Queen Mary’s time, in England, ready to yield to conformity (16).’

(16) *Ibid.* p. 251, 252.

In this letter is also the following passage: “As for the vicarages, they are so poorly endowed, as ten of them being united will scarce suffice to maintain an honest minister. For the churches, they are for the most part in ruins; such as were presented to be in reparation, are covered only with thatch. But the incumbents, both parsons and vicars, did appear to be such poor, ragged, ignorant creatures (for we saw many of them in the camp), as we could not esteem any of them worthy of the meanest of those livings, albeit many of them are not worth above 40s. per annum. This country

In 1608, he was sent to England, together with the Chief Justice, in order to represent to King James the effects which the establishment of public peace, and the several judicial progresses throughout Ireland, had produced in that kingdom. On this occasion he was highly applauded for his public services, and was particularly well received by the Chancellor, Lord Ellesmere, and by the Earl of Salisbury (1). After his return to Ireland, he continued to be very active in the measures adopted for the civilization of Ireland; and in 1610, wrote a letter to the Earl of Salisbury [I], containing an account of the measures that had been adopted for establishing a new plantation, or colony, in Ulster [K]. In 1612, he published, in 4to. "A Discovery of the true causes why Ireland was never entirely subdued [L]; and brought under obedience of the Crown of England, until

country doth lie within the diocese of Kilmore, whose Bishop (Robert Draper) was and is parson of Trym, in Meath, which is the best parsonage in all the kingdom; and is a man of this country birth, worth well nigh 400l. a year. He doth live now in these parts, where he hath two bishoprics; but there is no divine service or sermon to be heard within either of his dioceses. His Lordship might have saved us this labour of inquiry, touching matters ecclesiastical, if he had been as careful to see the churches repaired, and supplied with good incumbents, as he is diligent in visiting his barbarous clergy, to make benefit out of their insufficiency, according to the proverb, which is common in the mouth of one of our great Bishops here: *That an Irish priest is better than a milch cow* (17).

(17) *Ibid.* p. 274, 275.

[I] *A letter to the Earl of Salisbury.* This was first published, from a manuscript in the British Museum, in the edition of his Historical Tracts, printed in 1786.

[K] *A new plantation, or colony, in Ulster.* It is observed by the writer of Davies's life, that 'this salutary work had been long in contemplation, lest, as Bacon expresses it, Ireland, *civil*, should become more dangerous than Ireland, *savage*. And it was at length carried into execution, by settling a more industrious race from England and Scotland, with a success which at once conferred celebrity on the Prince, and happiness on the kingdom (18).'

(18) *Life*, p. 14.

Of the plantation in Ulster, Mr. Hume gives the following account: 'The whole province of Ulster having fallen to the crown by the attainder of rebels, a company was established in London, for planting new colonies in that fertile country. The property was divided into moderate shares, the largest not exceeding 2000 acres. Tenants were brought over from England and Scotland; the Irish were removed from the hills and fastnesses, and settled in the open country; husbandry and the arts were taught them; a fixed habitation secured; plunder and robbery punished; and, by these means, Ulster, from being the most wild and disorderly province of all Ireland, soon became the best cultivated and most civilized (19).'

(19) *History of England*, vol. v. p. 576, 577. edit. 8vo. 1763.

Sir John Davies says, 'His Majesty did not utterly exclude the natives out of this plantation, with a purpose to root them out, as the Irish were excluded out of the first English colonies; but made a mixed plantation of British and Irish, that they might grow up together in one nation: only, the Irish were in some places transplanted from the woods and mountains, into the plains and open countries, that, being removed (like wild fruit trees), they might grow the milder, and bear the better and sweeter fruit (20).'

(20) *Historical Tracts*, p. 222, 223.

[L] *A discovery of the true causes, &c.* At the beginning of this piece, Sir John says, 'During the time of my service in Ireland (which began in the first year of his Majesty's reign) I have visited all the provinces of that kingdom, in sundry journies and circuits. Wherein I have observed the good temperature of the air; the fruitfulness of the soil; the pleasant and commodious seats for habitation; and safe and large ports and havens lying open for traffic, into all the west parts of the world; the long inlets of many navigable rivers, and so many great lakes and fresh ponds within the land; (as the like are not to be seen in any part of Europe) the rich fishings, and wild fowl of all kinds; and

lastly, the bodies and minds of the people, endued with extraordinary abilities of nature. The observation whereof hath bred in me some curiosity, to consider, what were the true causes why this kingdom, whereof our Kings of England have borne the title of Sovereign Lords, for the space of four hundred and odd years (a period of time wherein divers great monarchies have risen from barbarism to civility, and fallen again to ruin) was not in all that space of time thoroughly subdued and reduced to obedience of the Crown of England, although there hath been almost a continual war between the English and the Irish: and why the manners of the mere Irish are so little altered since the days of King Henry the Second, as appeareth by the description made by Giraldus Cambrensis, (who lived and wrote in that time) albeit there have been, since that time, so many English colonies planted in Ireland, as that, if the people were numbered at this day by the poll, such as are descended of English race, would be found more in number than the ancient natives (21).'

(21) *Ibid.* p. 1, 2.

Sir John afterwards observes, that the defects which hindered the perfection of the conquest of Ireland were of two kinds, and consisted, first, in the faint prosecution of the war; and next, in the looseness of the civil government. For the husbandman must first break the land before it be made capable of good seed; and when it is thoroughly broken and manured, if he do not forthwith cast good seed into it, it will grow wild again, and bear nothing but weeds. So a barbarous country, must be first broken by a war, before it will be capable of good government; and when it is fully subdued and conquered, if it be not well planted and governed after the conquest, it will often return to the same barbarism (22).'

(22) *Ibid.* p. 3, 4.

Much of the poverty of Ireland, and many of the disorders in it, he attributes to the *Brehon law*, and custom of *Tanistry*, which prevailed in that kingdom. 'If we consider,' says he, 'the nature of the Irish customs, we shall find that the people which doth use them, must of necessity be rebels to all good government, destroy the commonwealth where in they live, and bring barbarism and desolation upon the richest and most fruitful land of the world. For, whereas by the just and honourable law of England, and by the laws of all other well-governed kingdoms and commonwealths, murder, manslaughter, rape, robbery, and theft, are punished with death, by the Irish custom, or Brehon law, the highest of these offences was punished only by fine, which they called an *ericke*. Therefore, when Sir William Fitz-Williams (being Lord-Deputy) told Maguyre, that he was to send a Sheriff into Fermannagh, being lately before made a county; "Your Sheriff (said Maguyre) shall be welcome to me, but let me know his *ericke* (or the price of his head) beforehand; that if my people cut it off, I may cut the *ericke* upon the country." As for oppression, extortion, and other trespasses, the weaker had never any remedy against the stronger: whereby it came to pass, that no man could enjoy his life, his wife, his lands, or goods in safety, if a mightier man than himself had an appetite to take the same from him. Wherein they were little better than Cannibals, who do hunt one another; and he that hath most strength and swiftness, doth eat and devour all his fellows.

Again, in England, and all well-ordered commonwealths,

"until the beginning of his Majesty's happy reign." He dedicated this valuable and curious performance to the King; and the same year in which it was published he was made King's Serjeant (m).

(m) *Ibid.* p. 15.

During

'monwealths, men have certain estates in their lands and possessions, and their inheritances descend from father to son, which doth give them encouragement to build and to plant, and to improve their lands, and to make them better for their posterities. But by the Irish custom of *Tanistry*, the chieftains of every country, and the chief of every Sept, had no longer estate than for life in their chiefries, the inheritance whereof did rest in no man. And these chiefries, though they had some portions of land allotted unto them, did consist chiefly in cuttings and coheries, and other Irish exactions, whereby they did spoil and impoverish the people at their pleasure. And when their chieftains were dead, their sons or next heirs did not succeed them, but their Tanistres, who were elective, and purchased their elections by strong hand; and by the Irish custom of *Gavelkind*, the inferior tenants were partable amongst all the males of the Sept, both bastards and legitimate: and after partition made, if any of the Sept had died, his portion was not divided among his sons, but the chief of the Sept made a new partition of all the lands belonging to that Sept, and gave every one his part according to his antiquity.

'These two Irish customs made all their possessions uncertain, being shuffled and changed, and removed so often from one to another, by new elections and partitions; which uncertainty of estates hath been the true cause of such desolation and barbarism in this land, as the like was never seen in any country that professed the name of Christ. For, though the Irish be a nation of great antiquity, and wanted neither wit nor valour; and though they had received the Christian faith above 1200 years since; and were lovers of music, poetry, and all kind of learning, and possessed a land abounding with all things necessary for the civil life of man; yet (which is strange to be related) they did never build any houses of brick or stone, some few religious houses excepted, before the reign of King Henry the Second, though they were Lords of this island for many hundred years before, and since the conquest attempted by the English: albeit, when they saw us build castles upon their borders, they have only, in imitation of us, erected some few piles for the Captains of the country: yet I dare boldly say, that never any particular person, either before or since, did build any stone or brick house for his private habitation, but such as have lately obtained estates, according to the course of the law of England. Neither did any of them in all this time plant any gardens or orchards, inclose or improve their lands, live together in settled villages or towns, nor made any provision for posterity; which being against all common sense and reason, must needs be imputed to those unreasonable customs, which made their estates so uncertain and transitory in their possessions. For who would plant, or improve, or build upon that land, which a stranger, whom he knew not, should possess after his death? for that (as Solomon noteth) is one of the strangest vanities under the sun. And this is the true reason why Ulster, and all the Irish counties, are found so waste and desolate at this day; and so would they continue to the world's end, if these customs were not abolished by the law of England (23).

(23) Historical Tracts, p. 134—138.

But Sir John Davies admits, that the prevalence of these usages and customs in Ireland, was in great part the result of the improper conduct of the English government, which had refused to admit the generality of the native Irish to the benefit of the law of England. 'It is evident,' says he, 'by all the records of this kingdom, that only the English colonies, and some few Septs of the Irish, which were enfranchised by special charters, were admitted to the benefit and protection of the laws of England; and that the Irish generally were held and reputed

'aliens, or rather enemies to the Crown of England; inasmuch as they were not only disabled to bring any actions, but they were so far out of the protection of the law, as it was often adjudged no felony to kill a mere Irishman in time of peace (24).'
Sir John also observes, that 'by divers heavy penal laws, the English were forbidden to marry, to foster, to make gossip with the Irish, or to have any trade or commerce in their markets or fairs. Nay, there was a law made no longer since than the twenty-eighth year of Henry the Eighth, that the English should not marry with any person of Irish blood, though he had gotten a charter of denization, unless he had done both homage and fealty to the King in the chancery, and were also bound by recognizance with sureties, to continue a loyal subject (25).'

(24) *Ibid.* p. 83.

(25) *Ibid.* p. 92.

In another place, speaking of the state of the English colonies in Ireland in the reign of Edward III. Sir John Davies says, 'The English of this realm, before the coming over of Lionel, Duke of Clarence, were at that time become mere Irish in their language, names, apparel, and all their manner of living, and had rejected the English laws, and submitted themselves to the Irish, with whom they had many marriages and alliances, which tended to the utter ruin and destruction of the commonwealth: therefore, alliance by marriage, nurture of infants, and gossiping with the Irish, are by the statute of Kilkenny made high treason. Again, if any man of English race should use an Irish name, Irish language, or Irish apparel, or any other guise or fashion of the Irish; if he had lands or tenements, the same should be seized till he had given security to the Chancery, to conform himself in all points to the English manner of living; and, if he had no lands, his body was to be taken and imprisoned, till he found sureties as aforesaid. Again, it was established and commanded, that the English in all their controversies should be ruled and governed by the common law of England; and if any did submit himself to the Brehon law, or March law, he should be adjudged a traitor.—' Again, it was made penal to the English to permit the Irish to *creaght* or graze upon their lands; to present them to ecclesiastical benefices; to receive them into any monasteries, or religious houses, or to entertain any of their minstrels, rhymers, or news-tellers (26).'

(26) Historical Tracts, p. 169, 170, 171.

'This then,' says Sir John, 'I note as a great defect in the civil policy of this kingdom; in that for the space of three hundred and fifty years at least, after the conquest first attempted, the English laws were not communicated to the Irish, nor the benefit and protection thereof allowed unto them, though they earnestly desired and sought the same. For as long as they were out of the protection of the law, so long as every Englishman might oppress, spoil, and kill them without count, how was it possible they should be other than outlaws and enemies to the Crown of England? If the King would not admit them to the condition of subjects, how could they learn to acknowledge and obey him as their sovereign? when they might not converse or commerce with any civil man, nor enter into any town or city, without peril of their lives; whither should they flee, but into the woods and mountains, and there live in a wild and barbarous manner? If the English magistrates would not rule them by the law which doth punish treason, and murder, and theft with death, but leave them to be ruled by their own Lords and laws, why should they not embrace their own Brehon law, which punisheth no offence but with a fine or ericke? If the Irish be not permitted to purchase estates of freeholds or inheritance, which might descend to their children, according to the course of our common law, must they not continue their custom of *tanistry*? which makes all their posses-

sions

During the same year, a Parliament was assembled in Ireland, of which Sir John Davies was elected a Member, and he was also appointed Speaker; but his election to that office was disputed [M]. His election, however, being afterwards confirmed, he addressed a very learned speech to the Lord-deputy Chichester [N], in 1613, when he was presented and

(27) *Ibid.* p. 96, 97.

sions uncertain, and brings confusion, barbarism, and incivility (27).'

This performance of Sir John Davies's, which contains information respecting the affairs and administration of Ireland, of the most important and authentic kind, has been several times printed both in Ireland and in England. It was last printed with his Historical Tracts in 1786.

[M] *His election to that office was disputed.* Of the calling of this parliament, and the dispute concerning Sir John Davies's election to the office of Speaker, the following account is given by the writer of his life prefixed to his Historical Tracts: 'Amidst the distractions of civil war, and the repose of subsequent periods of improvement, no parliament had been called in Ireland during the last seven and twenty years; yet, never were legislative acts more necessary. The Irish nation was divided into two parties, whose power was nearly equal. The Roman Catholics formed the great body of the people: the Protestants composed probably not more than one fourth. The laws, however, imposed on the objects of their jealousy many disabilities: and the Protestants of consequence enjoyed all official profit, and all political power. When the people and the government stand thus opposed to each other, dissatisfaction must ever predominate. Such was the state of Ireland, when manifest utility induced the Lord-Deputy to issue writs for a new election in 1612. Both parties exerted the artifices and the violences, which accompany popular elections, when the minds of the electors are strongly agitated by hopes or apprehensions. The Roman Catholic party carried their elections chiefly in the counties; the Protestant party in the boroughs, several of which had been lately erected, during the progress of plantation. Sir John Davies was elected for the county of Fermagh; being the first representative which it had ever chosen. The House of Commons consisted now of two hundred and twenty-five members. Of these there appeared, when the House met, of the Protestant party, one hundred and twenty-one; of the Roman Catholic, one hundred and one. This approximation to equality had been alone sufficient to create great intrigues and altercation in any popular assembly. But, among the members who were then assembled to chuse a Speaker, and who were animated by a sense of ancient antipathy, and of recent opposition, the tumult approached nearly to the bloody scenes of a Polish diet. Sir John Davies was proposed as Speaker by the Court: Sir John Everard, who had been an Irish judge, but resigned, because he would not take the oath of supremacy, was supported by the Roman Catholic party. The House divided. The court members went out, according to parliamentary form. But their opponents, considering themselves as the majority of legal representatives, placed Sir John Everard in the chair as duly elected. And nothing remained for the real majority but to remove the intruder, or to place the true Speaker in the same chair. The perseverance of the majority induced the minority to secede from an assembly, which they thus found they could not rule. All parties had been so much accustomed in that country to attempt every thing by force, that the parliament-men had not yet learnt to defeat, or to qualify, disagreeable measures by sly intrigue, pertinacious debate, or by close divisions. The great body of the people applauded the seceders. And the Lord-Deputy Chichester, whose prudence was equal to his firmness, prorogued the parliament, in order to suffer men's minds to cool, and to enable the seceding members to lay their complaints before the King (28).'

(28) *Life*, p. 16, 17, 18.

The dispute concerning the Speaker of the Irish House of Commons was afterwards determined, by

the King and Privy-Council of England, in favour of Sir John Davies. In a speech made by James at this time to the Irish agents, at Whitehall, is the following passage: 'There were in the lower House two bodies, and but one head; a greater monster than two heads upon one body. And whereas you should have made an humble and dutiful answer to the commendation which I made of a Speaker, you the recusant party (being the fewer) when the greater number went out to be numbered, shut the door, and thrust one into the chair as a Speaker *manu forti*. After this, the recusants of both Houses depart from the parliament. The like was never heard of in France, Spain, or any other kingdom of Christendom (29).'

(29) *Coxe's Hist. of Ireland*, Part ii. p. 27.

[N] *He addressed a very learned speech to the Lord-Deputy Chichester.* This speech was first published by Dr. Thomas Leland, in the second volume of his History of Ireland. He has pointed out some mistakes in it; but styles Sir John Davies "an able and judicious inquirer into the affairs of Ireland (31)". It is observed by the writer of our author's life prefixed to his Historical Tracts, that "this is unquestionably one of the most learned and instructive orations that ever was pronounced by the Speaker of the parliament in either kingdom. It was seasonable too, at a time when parliaments had been so long disused. He minutely traces the history of the Irish legislature, which, from the epoch of Poyning's act, was extremely complex; and he throws many rays of light on a subject, which was in those days involved in peculiar obscurity (32)".

(30) *Ibid.* p. 23.

(31) *History of Ireland*, vol. ii. p. 489.

(32) *Life*, p. 204.

Towards the close of this speech Sir John Davies flattered King James as grossly in prose, as he had formerly flattered Queen Elizabeth in verse. He says to the Lord-Deputy, 'Right Honourable Lord, though you have no need of my praise, yet it is most needful in respect of the place you hold, that your Lordship should be adorned with all praiseworthy virtues. You had need be a most virtuous and worthy Deputy, since you sit in the throne, and represent the person of the most virtuous and excellent King in the world. For he that doth fight with the sword of a King, and write with the pen of a King; he that hath the justice, mercy, and bounty of a King in his hands, had need be furnished with those noble powers and virtues as are fit for the rule and government of a kingdom, especially if he hold the place of such a King as our most renowned and gracious sovereign is, who is the greatest and best King that now reigneth upon the face of the earth. I call him the greatest King, not so much for the largeness and extent of his territories, nor for the multitude of his subjects, though he be in possession of three great kingdoms, and doth command more martial and able men than any King in Europe at this day. But I will call him indeed the greatest King, for his exceeding great measure of goodness and virtue, and for the great grace and favour that his Majesty standeth in with the divine Majesty, the King of Kings. For if that man be accounted the greatest subject of a kingdom that is in highest favour with a King upon earth, why should not that King be the greatest King on earth, that is in greatest favour with the King of Heaven? And that our most gracious sovereign standeth in highest favour with Almighty God, doth not only appear by the innumerable blessings poured from heaven upon him, and upon his kingdoms for his sake, but by the special providence and care God hath always had of his sacred person, by protecting and delivering him from his enemies. Again, I will call his Majesty the best King, for that he is a most just King,

and approved as Speaker. It is observed by Dr. Leland, that this was the first House of Commons formed in Ireland "by a general representation, instead of being confined to Members sent by the counties and boroughs of the Pale (n)." In this Parliament, the King's right to the Crown of Ireland was recognized; an Act of General Indemnity was passed, with an exception of Tyrone, Tyrconnel, and O'Dogharty; some ancient laws were repealed, which had prohibited intercourse between the English within the Pale, or five counties round Dublin, and the Irish without; acts were passed for the improvement of the police; and an entire subsidy was granted, to relieve the King from the continual expence of supporting the Irish Government (o).

(n) History of Ireland, vol. ii. p. 489.

In 1614, Sir John Davies published "A Declaration of our Sovereign Lord the King, concerning the Title of his Majesty's Son, Charles, Prince of Wales, and Duke of Cornwall." The same year he was elected a Member of the Society of Antiquaries (p). In 1615, he published, at Dublin, in folio, his Reports of Cases adjudged in the King's Courts in Ireland; to which he prefixed a Preface, addressed to Lord Ellesmere, Lord-Chancellor of England, which is justly esteemed one of the best prefaces that ever was prefixed to a law-book. It contains a very learned and eloquent eulogium on the Common Law of England [O], and a Vindication of its Professors. Soon after the publica-

(o) Life of Sir John Davies, ut supra, p. 21.

(p) Ibid. p. 21.

King, and justice is the best of all kingly virtues; and for that also he is a most bountiful King, resembling therein the divine goodness, ever spreading and communicating his riches unto others, which we must needs remember in this kingdom; for we cannot forget it without ingratitude, since we all know that his Majesty doth not only expend the whole revenue of this land upon itself, but spares yearly out of England a great mass of treasure, to support the extraordinary charge thereof, out of which the greater number of us here present, by entertainments, pensions, or rewards, do taste every day of his Majesty's bounty.

Lastly, his Majesty ought to be called the best King, as well for his sweet inclination to peace, whereby he doth make happy both his own dominions, and also his neighbour kingdoms round about him, as for his singular piety and religion towards God, which is the best and highest praise that can be given to any Prince. But I should launch forth into a main sea, that hath neither bottom nor shore, if I should proceed farther in the praise of such a Prince, whose worthiness exceeds all degrees of comparison. It is a theme too high, and too large for me to handle: it becometh me better to give thanks than praise (33).

(33) Historical Tracts, p. 314, 315, 316, 317.

[O] *Eulogium on the Common Law of England.* The Common Law of England, says he, "is nothing else but the common custom of the realm; and a custom which hath obtained the force of a law, is always said to be *Jus non scriptum*, for it cannot be made or created, either by charter, or by parliament, which are acts reduced to writing, and are always matter of record, but being only matter of fact, and consisting in use and practice, it can be recorded and registered no where, but in the memory of the people. For a custom taketh beginning, and groweth to perfection in this manner: when a reasonable act once done is found to be good and beneficial to the people, and agreeable to their nature and disposition, then do they use it, and practise it, again and again, and so by often iteration, and multiplication of the act, it becometh a custom, and being continued without interruption time out of mind, it obtaineth the force of a law. And this customary law is the most perfect, and most excellent, and without comparison the best, to make and preserve a commonwealth; for the written laws which are made either by the edicts of Princes, or by Counsels of estate, are imposed upon the subject before any trial or probation made, whether the same be fit and agreeable to the nature and disposition of the people, or whether they will breed any inconvenience or no. But a custom doth never become a law to bind the people, until it hath been tried and approved time out of mind, during all which time there did thereby arise no inconvenience; for if it had been found inconvenient at any time, it had been used no longer, but had been interrupted, and consequently it had lost the virtue and force of a law. Therefore, as the law of nature,

which the schoolmen call *Jus commune*, and which is also *Jus non scriptum*, being written only in the heart of man, is better than all the written laws in the world to make men honest and happy in this life, if they would observe the rules thereof: so the customary law of England, which we do likewise call *Jus commune*, as coming nearest to the law of nature, which is the root and touchstone of all good laws, and which is also *Jus non scriptum*, and written only in the memory of man (for every custom, though it took beginning beyond the memory of any living man, yet it is continued and preserved in the memory of men living) doth far excel our written laws, namely our statutes or acts of parliament: which is manifest in this, that when our parliaments have altered or changed any fundamental points of the common law, those alterations have been found by experience to be so inconvenient for the commonwealth, as that the common law hath in effect been restored again, in the same points, by other acts of parliament, in succeeding ages. And as our customary unwritten law doth excel our parliament laws, which are written, so for the government of the commonweal of England (which is as well instituted and established as any commonwealth in Christendom,) our native common law is far more apt and agreeable, than the civil or canon law, or any other written law in the world besides: howsoever some of our countrymen, who are *cives in aliena republica*, & *hostes in sua*, may perhaps affirm the contrary. But certain it is, that the great and wise men of England, in the parliament of Merton, did not prefer a foreign law before their own, when motion being made by the clergy, that children born before marriage might be adjudged legitimate, they all made answer with one voice, *Nolumus leges Angliæ mutari*. And again, in 11 R. 2. when a new course of proceeding in criminal causes, according to the form of the civil law, was propounded in that unruly parliament, answer was made by all the estates, that the realm of England neither had been in former times, nor hereafter should be, ruled and governed by the civil law, *Rot. Parliam. 11 R. 2. in Archiv. Turris*. And here I may observe, for the honour of our nation, and of our ancestors, who have founded this commonweal wherein we live, and enjoy so many felicities, That England having had a good and happy genius from the beginning, hath been inhabited always with a virtuous and wise people, who ever embraced honest and good customs, full of reason and conveniency, which being confirmed by common use and practice, and continued time out of mind, became the common law of the land. And though this law be the peculiar invention of this nation, and delivered over from age to age by tradition (for the common law of England is a tradition, and learned by tradition as well as by books) yet we may truly say, That no human law, written or unwritten, hath more certainty in the rules and maxims, more coherence in the parts thereof, or more harmony of reason in it: nay, we may

tion of this work, Sir John Davies appears to have quitted Ireland; and he seems to have been induced to leave that kingdom, in consequence of a change in its Administration [P]. After his return to England, he was appointed to act as one of the Justices of Assize in several circuits (q). He was also elected a Member of the House of Commons, for Newcastle-under-line, in the Parliament which was assembled at the beginning of the year 1621. On the fifth of February, that year, he made a speech in behalf of a supply to be granted to the King (r); but he seems not often to have spoken in Parliament at this period [Q]. He was, however, about to have been placed in a station of higher dignity, when he was carried off by an apoplexy, in the night of the seventh of December, 1626, in the fifty-seventh year of his age. He had supped that night with the Lord-keeper Coventry, having been previously appointed Lord Chief Justice of England [R], in the room of Sir

(q) *Atb. Oxon. ut supra.*

(r) *Parliamentary History of England, vol. v. p. 329, 330.*

may confidently aver, that it doth excel all other laws in upholding a free monarchy, which is the most excellent form of government, exalting the prerogative royal, and being very tender and watchful to preserve it, and yet maintaining withal the ingenuous liberty of the subject. Briefly, it is so framed and fitted to the nature and disposition of this people, as we may properly say it is *connatural* to the nation, so as it cannot possibly be ruled by any other law. This law, therefore, doth demonstrate the strength of wit and reason, and self-sufficiency, which hath been always in the people of this land, which have made their own laws out of their wisdom and experience (like a silk-worm that formeth all her web out of herself only) not begging or borrowing a form of a common-weal, either from Rome or from Greece, as all other nations of Europe have done, but having sufficient provision of law and justice within the land, have no need *Justitiam & judicium ab alienigenis emendicare*, as King John wrote most nobly to Pope Innocent the Third, *Matth. Paris. Histor. magn. p. 215. En populus sapiens & intelligens, gens magna*: as it is said of God's chosen people, 4 Deut. Neither could any one man ever vaunt that like Minos, Solon, or Lycurgus, he was the first lawgiver to our nation: for neither did the King make his own prerogative, nor the judges make the rules or maxims of the law, nor the common subject prescribe and limit the liberties which he enjoyeth by the law. But as it is said of every art or science, which is brought to perfection, *Per varios usus artem experientia fecit*; so it may be properly said of our law, *Per varios usus legem experientia fecit*: Long experience, and many trials of what was best for the common good, did make the COMMON LAW (34)."

(34) Preface Dedicator to Sir John Davies's Reports, p. 3, 4, 5, 6. edit. 1628.

(35) Life, p. 23.

[P] *In consequence of a change in its administration.* It is observed by the writer of our author's life, that, in 1616, the Lord-Deputy Chichester was succeeded by Sir Oliver St. John; the chief justice, Sir John Denham, by Sir William Jones; and Worthington was recommended by Bacon, as Attorney-General, in the room of Sir John Davies (35). [Q] *He seems not often to have spoken in parliament at this period.* It is remarked by the writer of his life, that Sir John Davies seldom spoke, except on the affairs of Ireland, being, from his office of King's serjeant, perhaps more than from principle, a favourer of the court. When it was moved to acquaint the King with the grievances of Ireland, considering how much blood and treasure it had cost this kingdom, Sir John said, It is expressly in the law-books set down, that Ireland is a member of the Crown of England; yet this kingdom here cannot make laws to bind that kingdom; for they have there a parliament of their own. Sir Edward Coke, who was the experienced leader of that House, suggested, that they ought to consider, first, *what we may do*; and secondly, *what it fit to be done in a parliamentary course*. Ireland, says he, was never totally reduced till the coming of this King; for there was ever a back door in the north of that kingdom. If Ireland be not safe, we cannot be sure; but if Ireland be safe, our navy well furnished, and the low-countrymen our fast friends, we need not fear the Pope, or the Devil. It is both fit and lawful for us to complain for Ireland: that on such complaints the King doth order a reformation, and those things which may

not be reformed but by a parliament, his Majesty doth put in a course, by giving order for a parliament in Ireland, to remedy the abuses there. Considering recent transactions, this is surely a remarkable debate. Sir John Davies was the first, we see, who, in the House of Commons, contended, that the parliament of England could not make laws to bind the people of Ireland, because they had a parliament of their own. And Sir Edward Coke, when giving his opinion, *as to what they might do*, admits rather than denies a position, which having been at length formally acknowledged, hath established the independence of the Irish nation.

It is a remark, which does no little credit to Ireland, that scarcely any man ever enjoyed the offices of her government, who did not prove for ever after her strenuous defender. Sir John Davies again evinced how much he was a zealous friend, by defending her interests in an affair, which was then of full as much importance to her. A bill was introduced, in April 1621, against the importation of Irish cattle into England, and prohibiting the exportation of coin from this kingdom to Ireland. It is curious to trace the sentiments of members, from their speeches on two subjects, which were in those days little understood. Mr. Wentworth approved of the bill, as far as it went to prevent the export of coin; but would not have *virtuall restrained*, which would undo the poor, to enrich the gentleman. Sir John Ipsley said, that there is half as much spent by those of Ireland, here in England, as they received for Irish cattle, as there is no household stuff used in Ireland, but what comes out of England. Sir Robert Phillips insisted, that the price of victuals in Somersetshire is, notwithstanding the importation of Irish cattle, which mar the breed of England, as dear as ever; yet it hath caused the export of twenty thousand pounds out of Somersetshire only. Sir Edward Sackville remarked, that it is not *cheapness*, but money, which enricheth the kingdom; and if Irish cattle be brought in, and our money sent out, we shall still be poor. On the contrary, Sir John Davies contended, that cattle being the principal commodity of Ireland, and its wool coarse, if we bar the importation of cattle, we shall impoverish that kingdom, and discourage its tillage; by which means, that country would be again reduced to barbarism: that no money being current in Ireland but English, and there being no mint, as in the time of King John and Edward the Fourth, if we prevent the import of cattle, and not petition the King for a coinage, or a currency of foreign coin, the new planters in those parts will soon leave the kingdom. He hoped, that the House would not deal worse with Ireland, which was a member of this crown, than we do with the low countries, which carry away infinite sums for their Friesland horses, that are chiefly used here for coaches. The bill was thereupon re-committed, and finally lost (36)."

[R] *Appointed Lord Chief Justice of England.* Anthony Wood says, that, being constituted Lord Chief Justice of the King's Bench, he had his robes made in order to be settled in that high office, as his daughter hath several times reported, but died suddenly, before the ceremony of settlement or installation could be performed (37)."

(s) Life, p. 29.

(t) Ath. Oxon.
ut supra.

Randolph Crew (s). He was buried in the Church of St. Martin in the Fields, where a monument was fixed on a pillar near his grave, with an inscription on it, giving him the following character: *Vir ingenio compto, rarâ facundiâ, oratione cum solutâ, tum numeris astrictâ, felicissimus: Juridicam severitatem morum elegantiâ, et amœniore eruditione mitigavit: Patronus fidus, Judex incorruptus, ingenue pietatis amore, et anxie superstitionis contemptu, juxta insignis (t).* He was a man of fine genius, and of uncommon eloquence; and an excellent writer both in prose and in verse. He tempered the severity of the lawyer by the elegance of his manners, and the accomplishments of polite literature. He was a faithful advocate, and an incorrupt judge; and equally remarkable for his contempt of superstition, and his attachment to sincere and genuine piety.

Sir John Davies was a very able and learned Lawyer; and the pieces written by him concerning Ireland are extremely valuable. They are written with great perspicuity, and are the result of deep knowledge, and diligent investigation. He was one of the best prose writers of his time; and his poetical pieces have considerable excellence: but he seems not hitherto to have obtained a reputation adequate to his merit. A new edition of his poetical works, consisting of his "Poem on the Immortality of the Soul; the Hymns of "Astrea; and Orchestra, a Poem on Dancing [S];" was published, in small 8vo. in 1773, by Mr. Thomas Davies. In 1786, his Discovery of the true causes why Ireland was never entirely subdued, &c. his two letters to the Earl of Salisbury, and his speech to the Lord Deputy Chichester, were published together in one volume, 8vo. under the title of "Historical Tracts by Sir John Davies." To these a life of him was prefixed, to which we have been much indebted in the course of this article.

(u) Life, p. 31.

(w) Ath. Oxon.
ut supra.

Besides the works already mentioned, Sir John Davies was the author of an Abridgment of Sir Edward Coke's Reports, in Law French, which was translated into English after his decease, and published in 1651. His own Reports, which were at first published in Law French, in folio, were also afterwards translated into English, and reduced to an octavo size (u). He was also author of a piece, intitled, "*Jus imponendi vestigalia: or, the learning touching customs, tonnage, poundage, and impositions on merchandizes, &c (w).*" Some of his charges to Grand Juries, as a Judge of Assize, are preserved among the Harleian MSS. in the British Museum.

Sir John Davies married Eleanor Touchet, youngest daughter of George Lord Audley, Earl of Castlehaven, by whom he had one son, who was an idiot, and died young, and a daughter named Lucy, who was married to Ferdinando Lord Hastings, afterwards Earl of Huntingdon. Sir John's Lady was a very singular character, and dealt much in prophecies [T], which brought on her very rigorous treatment after the death of her husband, whom

[S] Orchestra, a Poem on Dancing.] This poem consists of more than one hundred and thirty stanzas; but it is unfinished. The following are the five first stanzas:

I.

Where lives the man that never yet did hear
Of chaste Penelope, Ulysses' Queen?
Who kept her faith unspotted twenty year,
Till he return'd that far away had been,
And many men, and many towns had seen:
Ten year at siege of Troy he ling'ring lay,
And ten year in the midland sea did stray.

II.

Homer, to whom the muses did carouse
A great deep cup with heav'nly nectar fill'd,
The greatest, deepest cup in Jove's great house,
(For Jove himself had so expressly will'd)
He drank off all, nor let one drop be spill'd;
Since when his brain that had before been dry,
Became the well-spring of all poetry.

III.

Homer doth tell in his abundant verse
The long laborious travels of the man,
And of his Lady too he doth rehearse
How she illudes with all the art she can,
Th' ungrateful love which other Lords began:
For of her Lord, false fame had long since
sworn,

That Neptune's monsters had his carcase torn.

IV.

All this he tells, but one thing he forgot,
One thing most worthy his eternal song,
But he was old, and blind, and saw it not,
Or else he thought he should Ulysses wrong,
To mingle it his tragic acts among:
Yet was there not in all the world of things,
A sweeter burthen for his muses wings.

V.

The courtly love Antinous did make,
Antinous that fresh and jolly knight,
Which of the gallants that did undertake
To win the widow, had most wealth and might,
Wit to persuade, and beauty to delight.
The courtly love he made unto the Queen,
Homer forgot, as if it had not been (38).

In the panegyric on dancing, addressed by Antinous to Penelope, are the following lines:

Dancing, bright Lady, then began to be,
When the first seeds whereof the world did spring,
The fire, air, earth and water did agree,
By love's persuasion, nature's mighty King,
To leave their first disorder'd combating;
And in a dance such measure to observe,
As all the world their motion should preserve.

Since when they still are carried in a round,
And changing come one in another's place,
Yet do they neither mingle nor confound,
But ev'ry one doth keep the bounded space
Wherein the dance doth bid it turn or trace;
This wond'rous miracle doth love devise,
For dancing is love's proper exercise (39).

[T] Dealt much in prophecies.] An account was published of her prophecies in 1649, in 4to. under the title of *Strange and wonderful prophecies*. She was reported to have foretold the death of her husband. Anthony Wood, speaking of the time of Sir John Davies's death, says, "It was then commonly rumoured, that his prophetic Lady had foretold his death in some manner, on the Sunday going before. For while she sat at dinner by him, she suddenly burst out with tears: whereupon he asking her what the matter was, she answered, "Husband, these are your funeral tears;" to which he made reply,

(38) Poetical
Works, p. 137.

(39) Ibid. p. 143.

whom she survived many years. She died in 1652, in the parish of St. Bride's, and was interred near the remains of her husband in St. Martin's Church (x).]

T. (x) *Id. ibid.*

(40) *Arb. Oxon.*
at supra.

reply, "Pray, therefore, spare your tears now, and I will be content that you shall laugh when I am dead (40)." Lady Davies also foretold the death of Archbishop Laud, but appears to have been mistaken as to the time. Dr. Heylin, speaking of attacks made by several men against Archbishop Laud in the year 1634, says, "That the other sex might whet their tongues upon him also, the Lady Davies, the widow of Sir John Davies, Attorney-General for King James in the realm of Ireland, scatters a prophecy against him. This Lady had before spoken something unluckily of the Duke of Buckingham, importing, that he should not live till the end of August, which raised her to the reputation of a cunning woman amongst the ignorant people: and now she prophesies of the new Archbishop, that he should live but few days after the fifth of November; for which, and other prophecies of a more mischievous nature, she was after brought into the Court of High Commission; the woman being grown so mad, that she fancied the spirit of the prophet Daniel to have been infused into her body. And this she grounded on an anagram which she made of her name, viz. ELEANOR DAVIES, REVEAL O DANIEL: and though the anagram had too much by an L, and too little by an S; yet she found *Daniel* and *Reveal* in it, and that served her turn. Much pains was taken by the Court to dispossess her of this spirit; but all would not do, till Lamb, then Dean of the Arches, shot her through and through, with

an arrow borrowed from her own quiver: for whilst the Bishops and Divines were reasoning the point with her out of Holy Scripture, he took a pen into his hand, and at last hit upon this excellent anagram, viz. DAME ELEANOR DAVIES, NEVER SO MAD A LADIE: which having proved to be true by the rules of art, "Madam," said he, "I see you build much on anagrams, and I have found one which I hope will fit you." This said, and reading it aloud, he put it into her hands in writing; which happy fancy brought that grave Court into such a laughter, and the poor woman thereupon into such a confusion, that afterwards she grew either wiser, or was less regarded (41).]

It appears that Lady Davies about this time made a journey into Holland, where she published one of her prophecies at Amsterdam, and inscribed it to the Elector Prince Charles of the Rhine. But after her return to England, she was prosecuted in the High Commission Court, particularly for what was called "an enthusiastical petition to King Charles;" and appears to have been treated with great rigour and cruelty. She was fined three thousand pounds, and closely imprisoned two years in the Gatehouse, Westminster. She is also said to have been confined several years in Bethlem Hospital, and in the Tower of London; and she complained, that, during part of her imprisonment, she was not allowed the use of a Bible, nor permitted to have the attendance of a female servant (42).]

(b) In the room of Mr. Ashton, Master of Jesus-College.

DAVIES (JOHN), a learned Critic in the XVIIIth century, was born in London April 22, 1679. His father was a Merchant, or Tradesman, in that city, who died while his children were young; and his mother (a), a daughter of Sir John Turton, Knight [A]. Our author was educated in grammar learning at the Charterhouse-school; and admitted, June 8, 1695, into Queen's-College in Cambridge, where he took the degree of Bachelor of Arts in 1698. He was, on the 7th of July 1701, elected Fellow of that College (b); and the year following took the degree of Master of Arts. In 1709 he had the honour of being one of the Proctors of the University. Having now distinguished himself by his many excellent qualifications, he was collated in 1711, by Dr. John Moore, Bishop of Ely, that great patron of learning and learned men, to the rectory of Fen-Ditton near Cambridge, and to a Prebend in the Church of Ely (c). The same year he took the degree of Doctor in Laws. Upon the death of Dr. James, he was chosen in his room Master of Queen's College, March 23, 1716-17: and created Doctor in Divinity in 1717, when King George I. was at Cambridge (d). This learned person died March 7, 1731-2, in the fifty-third year of his age; and was buried in the middle of Queen's-College-Chapel. Soon after, a handsome flat marble stone was laid over his grave, with an inscription [B]. As the several things which he hath published, are in Greek, or Latin, we will, for that reason, give an account of them only in the note [C]. We shall not attempt this learned and industrious man's character, lest it should

(a) She was living in the year 1743.

(c) The fifth stall; into which he was installed Sep. 24, 1711. Survey of the Cathedrals of Lincoln, Ely, &c. by Brown Willis, Esq. edit. 1730. 4to. p. 385.

(d) For most of these particulars we are obliged to Mr. Sedgwick, late Master of Queen's College, and to the learned Dr. W. Richardson, late Master of Emanuel.

(1) See *Chronica Juridicali*, &c. under those years.

[A] A daughter of Sir John Turton, Knt.] John Turton, Esq; was called to the degree of Serjeant at Law, April 11, 1689; constituted one of the Barons of the Exchequer, May 9, following; when he was knighted: and, on the 27th of June 1696, removed to the King's Bench, of which he was made one of the Justices (1). [B] A handsome flat marble stone was laid over his grave, with an inscription.] At the top, are the Doctor's arms, viz. Or, between a chevron three mullets, sable; impaling those of his wife (Edwards) And beneath is the following inscription:

Hic sitæ sunt reliquæ
Joannis Davies,
L. L. et S. T. D.
Hujus Collegii Præsidis,
ac Eliensis Canonici.
Natus est Londini Aprilis
die XXII. MDCLXXIX.
Denatus in his Ædibus
Martii die VII. MDCCXXXI.
Plura dici noluit vir optimus.

[C] As the several things which he hath published, are in Greek or Latin, we will, for that reason, give an account of them only in the note.] Ist then, he published in 1703, a new edition of Maximus Tyrius, under this title: *Maximi Tyrii Dissertationes*, Gr. & Lat. ex interpretatione Heinssii, recensuit Jo. Davissius, &c. 8vo. II. He gave a new edition of Julius Cæsar; *C. Julii Cæsaris* [et A. Hirtii] *quæ exstant omnia*. Ex recensione Joannis Davissii, Coll. Regin. Cantab. Socii, cum ejusdem Animadversionibus, ac notis Pet. Ciacconii, Fr. Hottomanni, Joan. Brantii, Dionys. Vossii, & aliorum. Accessere Metaphrasis Græca Librorum Septem de Bello Gallico, necnon Indices necessarii. 4to. Cantab. 1706 and 1727. III. And of Minucius Felix; *M. Minucii Felicis Octavius*. Ex recensione Joannis Davissii; Cum ejusdem Animadversionibus, ac Notis integris Des. Heraldii & Nic. Rigaltii, necnon selectis aliorum. Accedit Commodianus, ævi Cypriani Scriptor, cum observationibus antehac editis, aliisque nonnullis, quæ jam primum prodeunt. Cantab. 1707 and 1712, 8vo. IV. Next, he undertook to publish new and beautiful editions of M. T. Cicero's Philosophical pieces, by way of supplement to what the

most

should suffer from our imperfect representation. However, thus far we will venture to say, that his works have been received, in general, with great applause [D]; and most of them have passed through several editions.

(2) The dedication of this book to Bp. Moore is dated Oct. 15, 1708.

(3) The dedication of this book to Dr. Richard Bentley is dated July 26, 1717.

most learned Grævius had published of that excellent author, but had been hindered by death from finishing. He put out therefore in 1708, 1. his *Tusculan Disputations*, under this title; *M. Tullii Ciceronis Tusculanarum Disputationum Libri V. Cum Commentario Joannis Davisi*, 8vo. Cantab. 1709 (2), and again in 1723, 1730, 1738. The 1st and the last edition have at the end Dr. Ric. Bentley's *Emendationes*. The other pieces of Tully were published by our author in the following order; 2. *M. Tullii Ciceronis de Natura Deorum Libri tres. Cum Notis integris Paulli Manucii, Petri Viſtorii, Joachimi Camerarii, Dionys. Lambini, Fulv. Ursini, & Joannis Walkeri. Recensuit, suisque Animadversionibus illustravit ac emendavit Joannes Davisus*, &c. Cantab. 1718 (3), 1723 and 1733, 8vo. 3. *M. Tullii Ciceronis libri de Divinatione & de Fato. Recensuit & suis Animadversionibus illustravit ac emendavit Joannes Davisus. Accedunt integrae Notae Paulli Manucii, Petri Viſtorii, Joachimi Camerarii, Dionys. Lambini, & Fulv. Ursini, una cum Hadriani Turnebi Commentario in Librum de Fato*, Cantab. 1721, 1730, 8vo. 4. *M. Tullii Ciceronis Academica. Recensuit, Variorum Notis suas immiscuit, & Hadr. Turnebi Petrique Fabri Commentarios adjunxit Joannes Davisus*, &c. Cantab. 1725, 1736, 8vo. 5. *M. Tullii Ciceronis de Legibus Libri tres. Recensuit, ac Petri Viſtorii, Paulli Manucii, Joachimi Camerarii, Dionysii Lambini, & Fulvii Ursini Notis suas adjecit Joannes Davisus*, &c. Accedit *Hadriani Turnebi Commentarius*. Cantab. 1727, 8vo. 6. *M. Tullii Ciceronis de Finibus Bonorum & Malorum Libri quinque. Ex recensione Joannis Davisi, &c. Cum ejusdem Animadversionibus, & Notis integris Petr. Viſtorii, P. Manucii, Joach. Camerarii, D. Lambini, ac Fulvii Ursini*. Cantab. 1728, 1741, 8vo. He had also gone as far as the middle of the third Book of Cicero's Offices, in order for a new edition of that most valuable work: but being prevented by death from finishing it, he recommended it in his will to the care of that great patron of learning Richard Mead, M. D. who put it into the hands of Dr.

Thomas Bentley, that he might fit it for the press. But the house where Dr. Bentley lodged (in the Strand, London) being set on fire thro' his carelessness, as 'tis said, in reading after he was in bed; Dr. Davies's notes and emendations perished in the flames, and so were irrecoverably lost (4). V. Another thing published by our learned author, was, *Laſtantii Firmiani Epitome Divinarum Institutionum ad Pentadium fratrem. Eam ex vetustissimo MS^o Taurinensi nuper editam recensuit, & suis animadversionibus illustravit, ac emendavit Joannes Davisus*. Cantab. 1718, 8vo.

[D] His works have been received, in general, with great applause.] Both at home and abroad. Abbé d'Olivet in particular, the French Translator of Cicero de *Natura Deorum*, gives our author just commendations for his beautiful edition of that book (5). But he seems afterwards to have altered his opinion, as appears from the harsh judgment he passes upon Dr. Davies, in the Preface to his new edition of Tully's Works (6), which we shall here subjoin for the sake of the curious and learned reader. *Joannes Davisus Anglus*. His viginti annis pleraque Ciceronis *Philosophica* edidit, operis Græviani perfectorem se professus. Verum, ut erumpat aliquando ex me vera vox, & dicam sine circumspectione quod sentio, *Homini homo quid praeſtat!* Quæ in Grævio modestia! quam ingenuus pudor! In altero quæ confidentia! aut, ne dixerim mollius, quæ procacitas! Tamen fateor, & libenter quidem, fuit in eo ingenium perspicax, acutum, solers: itaque locos aliquot feliciter explicuit. At minime serendus est, qui antiquis lectionibus è textu exterminatis, suis autem in earum locum somniis, si diis placet, inducendis, novum velit architectari Ciceronem: adeo ut, si qua ejus volumina secundis tertiusve curis retractata in lucem redierint, ultima editio sit etiam pessima: suscepto quasi certamine cum populari suo Richardo Bentleio, quem suarum ad Tusculanas emendationum approbatorem amplificatoremque habuerat, uter esset in contaminandis veterum exemplaribus licentior. M.
